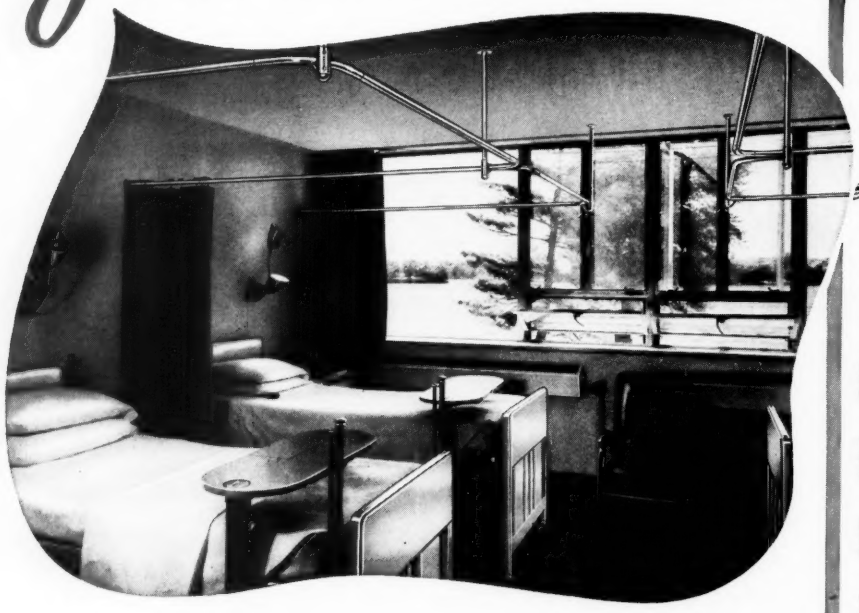
Judd Curtain Cubicles



Double Bed Space, Insure Privacy, Increase Income!

Hospitals the nation over are using this dependable, inexpensive means of increasing the comfort and privacy of patients, utilizing new areas for bed space and realizing greater income and profit.

For over 25 years, Judd Cubicle Equipment has converted corridors, wards and sun porches into revenue-producing patient rooms. It makes possible instant and complete privacy in physio-therapy, hydro-therapy, dental, examination and first-aid rooms.

And, because of the rugged characteristics of Judd Cubicle Equipment, Architects specify it with assurance; its moderate cost makes it quickly acceptable to Administrators.

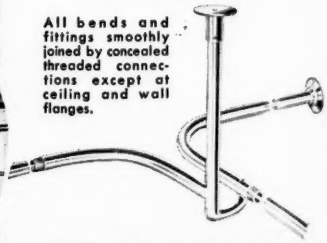
Judd's Estimating Service Shows How

To see how Judd Cubicle Equipment can serve to *your* best advantage, simply send us a rough sketch of your ward, room, corridors, etc. Indicate the location of windows, doors and beds. We will be pleased to make a survey and send you an estimate — no obligation, of course. See for yourself how a modest investment will augment your patient capacity and income.

Prompt delivery of all equipment is assured. Installation service available also if desired.

Designed for Beauty — Built for Strength

All bends and fittings smoothly joined by concealed threaded connections except at ceiling and wall flanges.



JUDD Reinforced Corner Bend Construction

INSTANT

Judd's Cubicle Curtain Screening gives immediate privacy without effort. No lost movement to set up cumbersome portable screens.

QUIET

The curtain is suspended from specially designed twin wheel hooks that glide silently along the rod at the slightest touch.

COMPLETE

Because Judd's Cubicle Equipment allows the passage around corners, one curtain completely screens the bed from the rest of the room.

VENTILATION

The curtains hang clear of the floor and permit free ventilation both above and below and no dirt-catching crevices. When not in use the curtains can be drawn back close to the wall allowing complete ventilation and daylight as well as a clear view of the entire ward.

UNOBSTRUCTED FLOOR

Judd's Cubicle Equipment is suspended from the ceiling, leaving the floor entirely free and thereby permitting easy and thorough cleaning.

CURTAINS

Much study and care have been given to the perfection of the curtains. The material is of a specially woven Jean cloth, super-shrunk, sun-fast and tub-fast, and is specifically made to withstand hospital laundering and sterilization.

FIXTURES

All parts are made of Aluminum Alloy metals and "Aluminited" to give a lasting finish that will not crack, chip or peel and is resistant to chemical fumes.

ENDORSEMENT

Judd's Cubicle Curtain Equipment has the enthusiastic approval of Architects, Consultants, Physicians, Nurses, and Hospital authorities everywhere. It is not restricted to Hospital wards, but is used in Dental units, treatment, examination and dressing rooms, as well as to enclose special baths.

Aluminum Tubing

Published as the

1954 DIRECTORY NUMBER OF *Hospital Progress*

Foreword

IN its 39th year, the Association continues to serve its members, other groups in the Church, the members of the clergy and the hierarchy, both in Canada and the United States by enlarging and extending its program of activities. An important sector of this expansion program relates to the more intensive development of HOSPITAL PROGRESS in its 35th year and the Catholic Hospital Directory now in its 25th annual edition.

In this issue, the Editors again present current developments both in hospital services and in nursing education. Embodied in this presentation are reports concerning the extent of these facilities and programs on the one hand and on the other, problems relating to their operation and management.

Hospital and Health Services, Part I, includes a summary of some of the more pressing current problems. This summary also presents data concerning the volume of service given in Catholic hospitals and allied agencies. As in previous issues of the Directory, there is presented the complete listing of all Catholic hospitals and allied agencies in Canada and the United States.

The interests of nursing education continue to be a vital and integral feature of hospital service, perhaps more so now than heretofore. Part II of the 1953 Directory is devoted to nursing education. Three levels are treated—collegiate programs in nursing education, hospital programs, and plans for the preparation of the practical nurse.

The growing demands for broader and more intensive preparation on the part of those actively engaged in hospital administration and in the hospital specialties have prompted the Editors to develop Part III, Education for Hospital Service. In this section are presented the courses in 12 specialties offered by Catholic universities, colleges and hospitals.

The religious organizations active in the direction of hospital and health services and in the conduct of nursing education programs constitute the subject matter of Part IV. Also, the relationships of hospitals and schools of nursing, in their varied activities, to the professional and governmental agencies were found to be sufficiently extensive to warrant the development of Appendix A as a ready reference source for general information concerning such groups.

Health Care Facts and Figures is the section containing data assembled from various sources but significant to the administrator in the operation of the hospital. Conveniently arranged and easily accessible, this information can be of practical assistance to the medical record librarian, the director of nursing, etc.

The final feature of this annual reference volume is The Purchasing Guide and Buying Directory—a valuable source of practical information for the hospital officer responsible for procurement of equipment, supplies and other needed services. An explanatory statement concerning The Purchasing Guide and an index to manufacturers and distributors of hospital requirements appears elsewhere in the Directory. Interspersed between the various sections will be found the advertisements of these companies, the majority of them widely known to the hospital field.

The Editors and compilers extend their thanks for this generous contribution, and express the hope that this report may serve as a practical aid to the members of the Association in their arduous task of providing hospital services in this difficult period.

New Hospitals and Agencies

Introduction

This is the 25th Annual Edition of the Catholic Hospital Directory. A quarter of a century ago conditions were somewhat different from what they are today. In particular, hospitals themselves have undergone much change during this period; correspondingly, hospital associations have not escaped the influence of change during this most eventful period in our history.

In 1930, Rev. Alphonse M. Schwitalla, S.J. had barely begun the term in the presidency of the Association. The 1929 depression was just underway—its severity was not foreseen. There was a concerted effort to educate the people in a better understanding of the *purpose* of the hospital as an institution for the restoration of health.

As Father Schwitalla completed arrangements for establishing the Association's Central Office in St. Louis, his first thought was focused on surveying the Catholic hospital field to establish the extent of Catholic hospitals and their facilities. Approximately six months were devoted to the assembly, tabulation and summarization of the findings. The report of the survey was published as part of the March 1930 issue of HOSPITAL PROGRESS.

This report embraced detailed materials concerning general and special phases of Catholic hospitals and schools of nursing in the United States and Canada. In addition there were included directories of hospitals in these two countries, and similar directories of Catholic schools of nursing. Thus it was established what hospitals there were, their facilities, services and educational programs, what communities they served, etc. Similarly, general identifying information was given for each Catholic school of nursing.

Some of the findings of that report now significant in the light of present developments are the following:

1. The extent of the field—then 641 Catholic hospitals with 95,888 beds and bassinets in the United States: for Canada, 134 hospitals with 22,627 beds and bassinets.
2. The relative significance of these institutions—in the United States approximately 10 per cent of all available facilities; for Canada about 27 per cent—almost three times as significant in the United States.
3. Average bed capacity—149 in the United States compared with 145.6 in Canada.
4. At that time two states—Mississippi and Wyoming—had no Catholic hospital, while in Canada every province and territory could boast of at least one such hospital.
5. Approximately 57 per cent of the Catholic hospitals in the United States and 37 per cent of those in Canada were recognized by the American College of Surgeons.
6. Schools of nursing then numbered 2,173 in the United States and 215 in Canada.
7. Catholic schools of nursing then listed included 74 in Canada and 429 in the United States.
8. Something like 22,075 (28.6 per cent of all) students were registered in the Catholic schools of nursing in the United States; 2,822 students were enrolled in Canadian Catholic schools.
9. Average enrollment was 51.7 and 47.6 per cent respectively in the United States and Canadian Catholic schools of nursing.
10. The report states that identification of religious orders and congregations is admittedly difficult and in many cases inaccurate for lack of full information.

Twenty-five years later—at the beginning of 1954—Rev. Francis P. Lively of Brooklyn, N.Y. is serving as the ninth President of the Association. Since the first edition of this directory was published, much has transpired. Some of the events conspicuously affecting hospitals during this period are:

1. The severity of the 1929 depression extending through the 30's.
2. The advent of Federal legislation affecting hospitals.
3. World War II—and its effects on civilian hospitals.
4. The E.M.I.C. Formula, and its successor, the Government Reimbursable Cost Formula in the purchase of hospital care from voluntary hospitals.
5. Formalized programs in hospital administration.
6. The study of the Commission on Hospital Care—which resulted in the Hill-Burton Act in the United States and the Hospital Construction Act in Canada.
7. The new emphasis on internships and residencies.
8. The growth in third-party agencies.
9. The creation of the Joint Commission on the Accreditation of Hospitals; and
10. The completion of the significant study by the Commission on the Financing of Hospital Care.

Many other considerations might be listed. These, however, have had a profound effect on present-day practices in hospitals. As for the Catholic field today, here are some facts:

1. The extent of the Catholic field—for Canada, 359 hospitals and health agencies with 63,366 beds; in the United States—1136 with 145,360 beds and 22,991 bassinets.
2. The relative significance of these agencies: in the United States, about nine per cent and in Canada, about 45 per cent.
3. Every state has Catholic hospital facilities.
4. About 70 per cent of the short and long-term Catholic hospitals in the United States and 38 per cent for Canada are accredited by the Joint Commission on the Accreditation of Hospitals.
5. Schools of nursing in the United States now number about 1100—of which 335 programs are under Catholic auspices.
6. Canadian Catholic schools of nursing total 80.
7. Enrollment in Catholic schools in the United States 32,983 students and for Canada 7,657 registrants.
8. All religious groups have been identified—a special section (Part IV) affords complete information.
9. Over 100,000 members of guilds and auxiliaries actively participate in Catholic hospital work.
10. The use of lay administrative officers is growing.
11. Complete data for departmental, nursing and clinical services are reported in this edition for the second time in four years.

This very brief resume of conditions during this quarter of a century of hospital work will recall to many the transition through which the hospital world has passed.

THE CATHOLIC HOSPITAL IN 1953

1. *Facilities and Service—1953*

By M. R. KNEIFL, B.S.
Executive Secretary
The Catholic Hospital Association

DURING 1951, 207 new hospitals were added to the Register of Hospitals of the American Medical Association, with about 73,000 beds. Analyzing this growth, it is noted that for Federal agencies the increase in hospitals was 33 while about 30,000 beds were added throughout the system; for state agencies, two new hospitals were added to the roster with an increase in beds throughout these institutions of 18,000 beds; in the category "all other hospitals" 172 new hospitals are registered, including, with additions to older hospitals, approximately 24,000 beds.

The growth picture during 1952 changed markedly. Actually, the increase in hospitals during this period was about one-eighth of that in 1951; in beds, only about one-sixth of those of the previous year. Federal agencies reduced their hospital system by two hospitals and closed 5,000 beds; state agencies closed five hospitals but increased other facilities by 8,000 beds; "all other hospitals" showed a significant increase—35 new hospitals were added to this category with in all 9,000 new beds.

Reviewing the record of development for the five previous years, it will be noted that the year 1951 shows the most significant increase. This is true both for the number of hospitals and beds. The record for 1953 is not yet available; the forecast, however, is that the increase will approximate that of 1952—in all likelihood it will be less.

This trend will continue unless the appropriations under the Hill-Burton Hospital Construction Act now scheduled to terminate in 1955 are on a higher level. Since appropriations are on a decreasing basis, the probable increase in hospital facilities during the remaining life of the Act will not be too significant.

During the period 1948-1953, Catholic hospital facilities (Table 3) have shown a reasonably satisfactory development. For the years 1951-1952, the increase in short-term hospitals was only two; facilities throughout the field experienced an increase amounting to about 1,800 beds.

For long-term hospitals, there was a decrease of three hospitals with about 500 beds. For allied agencies a similar trend is evident.

For the United States as a whole,

Catholic hospital facilities have gone forward by 1,085 beds and 113 bassinets. These will accommodate at least 35,000 patients.

In Table 2, similar data are given for Canadian Catholic hospitals. While there is a decrease of eight short-term hospitals, the loss in facilities is less than 100 beds. Long-term agencies increased by three hospitals and about 900 beds. There are four new small hospitals with about 125 beds.

The total picture for Canada shows an increase in facilities of about 900 beds and 750 bassinets. About 50,000 additional patients can be cared for annually in these facilities.

For both countries, Canada and the United States, a summary (Table 1) has been prepared. While the number of hospitals and allied agencies has decreased, facilities have increased by about 2,000 beds and 850 bassinets. This condition is somewhat better than obtains for the United States as a whole. Progress in this respect is at the rate of about 6 per cent; in terms of in-patients, it might be slightly more or less since these new facilities are not always so rapidly occupied.

No data are presented this year concerning the regional distribution of these agencies. The variation from last year's distribution is believed to be minimal.

2. The Catholic Hospital System

IN other sections of this introductory statement will be found summaries concerning the extent of Catholic hospital facilities by number of units and their capacity. In all, some 1,500 units are conducted under lay or Catholic auspices, in Canada and the United States, affording over 200,000 beds and 27,000 bassinets.

Practically all are owned by religious groups of men and women; some are only operated by these groups; this number, however, is small. Only a very few are operated by lay groups under ecclesiastical (or diocesan) authorities.

As for the United States and its possessions, there are at least 217 religious groups of men and women who are responsible for the more than 1,500 Catholic hospitals and related institutions. Six diocesan agencies are also active in this field. Detailed information is presented in Part IV of this reference number of HOSPITAL PROGRESS. In Canada, 63 religious groups and two diocesan agencies are responsible for more than 350 units having a capacity of 62,000 beds and 5,000 bassinets.

The names of the religious groups are sometimes very simple; sometimes quite complex. After several years of experimentation, the editors in the 1937 edition of this Directory devised a code system for identifying the particular groups. This, too, is outlined in Part IV; as indicated in that section, these groups are arranged in alphabetical order by a significant word in the name of the group.

Questions are often asked concerning what group operates this or that Catholic hospital; how many other hospitals does the group conduct; are there other related or independent groups of religious with the same or similar names active in the hospital field? Part IV contains the answers to many of these problems.

Religious groups of men in this field of social service include seven different congregations active in the United States and three in Canada. Among them are the Alexian Brothers, the Brothers of St. John of God, the Camillian Fathers (and Brothers), the Brothers of Mercy, etc.

Religious Groups Active in the United States

Religious groups of women are dominant and comprise at least 95 per cent of the religious devoted to this work. For instance, in the 200 series of the code employed to identify these groups, there are 21 groups of which 19 are independent Benedictines and two Bon Secours Sisters. In the next series (300), three of the five groups are the Carmelite Sisters; Dominicans (the 400 series) include 20 out of 21 independent groups here classified.

Most numerous of all groups are the Franciscans (the 500 series) which number in all 44 unrelated groups currently active in hospital work. To many, this category is most confusing with the many variations in name, in habit and in other respects. A substantial number of hospitals are represented in the activity of these 44 groups.

Five of the six groups in the 600 series are popularly known as "Grey" Nuns, whose Canadian origin dates from 1737. In the 700 series, three of the nine groups are Sisters of the Holy Ghost; the activity of the three groups of Incarnate Word Sisters who comprise the 800 series is almost entirely restricted to the southern sections of the United States.

Included in the next classification (the 900 series) are 22 groups among which are the Religious Hospitallers of St. Joseph and 18 groups of Sisters of St. Joseph, who also are prominent in the education field.

The next significant category (the 1100 series) embraces 35 unrelated and independent groups; 15 of these have Mary, the Mother of Our Lord, as a distinguishing feature in their names, while 17 of these groups are Sisters of Mercy. In the hospital field, the Sisters of Mercy are the most numerous, both in the number of hospitals (about 120) and religious active in this area of social work. Sixteen of these are unrelated groups while one, the Sisters of Mercy of the Union, adopted centralized government in 1929.

Of the four groups in the 1200 series two are Notre Dame Sisters while 11 of the 12 groups in the next category (the 1300 series) include three separate congregations of Precious Blood Sisters, three of Presentation Sisters and five different communities of Sisters of Providence. Two of the three groups in the 1500 series are Sisters of the Sacred Heart.

Sisters who trace their origin and work to St. Vincent de Paul are classified in the 1700 series; six of the eight groups of these sisters are assigned to this series. The Daughters of Charity of St. Vincent de Paul organized into the Eastern and Western Provinces are included in this category.

Religious Groups Active in Canada

A similar arrangement is followed for Canadian Catholic hospital activity. Reference to Table III of Part IV of this Directory provides the listing of the religious groups active in Canadian hospital work.

The primary difference between Canada and the United States lies in the fact that a significant part of Catholic hospital work is conducted by a few large religious groups. There are, of course, many other differences historically in respect to the origin of religious groups active in Canada, etc. Some of the Canadian groups are active, too, in the United States. A few groups of religious primarily active in this country have assumed hospital missions in Canada.

Some of the highlights for Canada are the following:

—The Franciscans (the C600 series) are represented with four groups.

—the Grey Nuns include five of the six groups classified in the C700 series.

—the Immaculate Conception Sisters have three groups assigned to the C900 series.

—the St. Joseph Sisters have nine groups of the 12 in the C1000 series; eight are Sisters of St. Joseph of independent congregations and the amalgamated Religious Hospitallers of St. Joseph.

—the C1100 series includes 11 groups, two of which are Sisters of St. Martha and six groups of Religious Hospitallers of the the Misericorde of Jesus—the pioneers in Catholic hospital activity in Canada and the United States, having founded Hotel Dieu de Quebec in 1639.

—the Notre Dame Sisters (C1200 series) have three of the four groups so classified.

—the Providence Sisters (C1300 series) are represented by two groups of the four assigned to this category; in this series is the Congregation of the Sisters of Charity of Providence founded in Canada and having extensive hospital activities.

Many other groups not specifically mentioned are to be found in Canada. In Part IV the full listing of these religious groups is presented.

Catholic hospitals differ from other hospitals in the matter of ownership and administration. Very few, if any other, groups operate hospitals either in Canada or the United States as do the Catholic religious congregations and orders.

To administer this system of institutions general superiors have established provinces where hospital and other activities warrant such a subdivision of responsibility. To achieve efficiency in these undertakings, there are over 130 provincial superiors in the United States and about 40 in Canada.

3. *Hospital Accreditation*

ON December 6, 1952 the Hospital Standardization Program of the American College of Surgeons was formally transferred to the Joint Commission for the Accreditation of Hospitals. This agency represents both medical and hospital interests and its furtherance of the standardization program should do much to encourage higher excellence in hospital administration, in medical practice in hospitals, and in education for the practice of medicine.

Early in 1953, the final list of approved hospitals under the standardization program was published by the American College of Surgeons. This official list became a part of the transfer of the program to the Joint Commission, and became the starting point for the Joint Commission's work.

Had this list been available earlier in 1953, the analysis which follows would have been included in the Association's 1953 Directory in its 24th edition of this annual publication. As a result, the timeliness of this presentation may be questioned. However, as evidence of the accomplishment of Catholic hospitals in this respect at that time, this analysis may be most helpful and valuable. From the summaries listed (Tables 4, 5), it is clear

that Catholic hospitals have achieved a high degree of recognition in this particular phase of hospital service.

Approvals are awarded either as "fully approved" or "provisionally approved." Summaries in respect to these two ratings by state and province are arranged by region (Table 5). A summary by regions both for Canada and the United States is presented in Table 4.

About the summary by states, it is interesting to observe that for seven states all Catholic hospitals are approved either fully or provisionally; for two states, the figure is 90 per cent; for three states, 80 per cent; for 11 states, 70-75 per cent; for six states, 66⅔ per cent; and for six provinces, 50 per cent of the hospitals have been awarded full or provisional recognition.

On a national level for Canada, 38 per cent of all Canadian Catholic hos-

pitals are so approved while for the United States, the corresponding percentage is 70. Regionally, this recognition is highest in the three Atlantic areas (Table 4) with an approximate value of 83 per cent; the other three areas vary from 64 to 66 per cent. Eastern Canada has an approval level of 50 per cent; lower Canada, about 40 per cent; in western Canada slightly more than one-third (34 per cent) of the Catholic hospitals have merited either full or provisional ratings.

A further observation might also be brought to the attention of our readers: one out of five (21.5 per cent) hospitals approved in the United States is a Catholic hospital though at best Catholic hospital facilities approximate only 10 per cent of all such facilities at the disposal of the people. For Canada, 38 per cent of Canadian Catholic hospitals are fully or provisionally approved, constituting 35.3 per cent of all approvals awarded to Canadian hospitals.

These achievements of the religious are noteworthy and can be readily understood. With each passing year, more Catholic hospitals are added to this roster. This analysis, it is hoped, may prove to be the yardstick for measuring future progress.

4. Lay Administrative Officers in Catholic Hospitals—1953

THE staffing of Catholic hospitals has been treated twice before in previous editions of this annual reference number. In this instance, the editors restrict themselves to five special positions—those of assistant administrator, chief accountant, personnel director, purchasing officer and public relations director. The particular point of interest is the extent to which lay persons have been engaged to carry out the technical work involved in each of these assignments of responsibility.

In this particular inquiry, slightly more than 60 per cent of the Catholic hospitals of the United States cooperated by supplying data. In considering this topic, the size of the hospitals involved must be borne in mind. Approximately 40 per cent of the Catholic hospitals of the United States are less than 100 beds in size. The average capacity of all Catholic hospitals is approximately 150 beds.

For Canada, only 25 per cent of Catholic hospitals supplied these data. While this response is obviously inadequate for statistical completeness, the findings are presented to afford the information now available concerning this matter. Approximately one-third of the replies were submitted by hospitals having 100 or less beds.

Assistant Administrator

When appraising the findings regarding this position, the reader must bear in mind the diversity of opinion which exists respecting this position. The utilization of the services of one or more persons solely as assistants to the administrator is not the only pattern of procedure involved in administering hospitals.

Percentagewise the findings show that less than 2 per cent (1.7) in the United States have lay persons in this position, about 81 per cent religious, and 17 per cent failed to answer. It is fair to assume that in this last category there is no assistant administrator.

For Canada, the percentages are:

Lay Assistant	1.4%
Religious as Assistant	68.6%
No Reply	30.0%

Chief Accountant

The highest frequency for lay persons is registered for this position—18.9 per cent in the United States and 20.6 per cent in Canada. For the United States only 10 per cent did not reply and for Canada, about 9 per cent; religious assigned to this position total for the United States and Canada about 70 per cent.

Personnel Director

This position is next in rank order of significance for lay staff members. One-seventh (14 per cent) of the Catholic hospitals in the United States and about one-fourteenth (7.3 per cent) of those in Canada employ lay persons. About one-third did not supply information, which indicates that religious carry this responsibility in about 50 per cent of Catholic hospitals in the United States and in about 60 per cent of Canadian Catholic hospitals.

Purchasing Officer

For Canada findings for this administrative position are the same as those for the position of personnel director. For the United States the results are almost the same: about one-eighth (12.1 per cent) of the hospitals assign this responsibility to lay persons, about 70 per cent to religious, and about 18 per cent did not supply answers to this point.

Table 6. Primary Administrative Positions in Catholic Hospitals—1953

	United States (518 replies)				*Canada (68 replies)*			
	*N.R.**	*Religious*	*Lay*	*%*	*N.R.**	*Religious*	*Lay*	*%*
Assistant Administrator	188	321	9	1.7	21	47	0	1.4
Chief Accountant	54	366	98	18.9	6	48	14	20.6
Personnel Director	173	272	73	14.0	22	41	5	7.3
Purchasing Officer	90	365	63	12.1	13	50	5	7.3
Public Relations Officer	310	137	71	13.7	42	21	5	7.3

*N.R.—No Reply

Public Relations Director

Again, conditions in Canada differ from those in the United States. About 7.3 per cent of Canadian Catholic hospitals engage lay persons for this position; about one-third of them assign this position to religious and two-thirds did not reply concerning this matter.

In the United States, 13.7 per cent of the public relations directors are lay persons, 26 per cent are religious; about 60 per cent of the hospitals did not answer this question. This is understandable; public relations as such is one of the new activities of administration only recently isolated as a specific function.

Table 6 presents the summary of this topic.

5. Departmental, Nursing, Clinic Services in Short and Long Term Hospitals—1953

IN response to many demands for detailed information concerning particular services, the editors of this directory assembled pertinent data for the 1950 edition of this annual publication.

The scope of the detailed information in this area included the following: departmental services, special nursing services for particular groups of patients, and out-patient and/or clinic services.

For the departmental services are included the medical record library, laboratory, blood bank, metabolism, X-ray, electrocardiograph pharmacy, physical therapy, occupational therapy, dental, medical social and rehabilitation activities.

Special nursing services include provisions for alcoholics, cardiac patients, the chronically ill, orthopedic, pediatric, poliomyelitis, psychiatric, tuberculosis, and recovery room facilities.

The third section of the findings concern out-patient and/or clinic services and embrace first what hospitals offer either of these services and secondly particular clinic programs in cancer, mental hygiene, psychiatry, heart and alcoholism.

In this initial effort, some areas may not have been complete; others were obviously accurate and conclusive. In the compilation of data for the year 1953, the advances in these 27 areas can be noted; also evident are the probable inaccuracies in the initial presentation.

For 1953, data for Canada and the United States are presented. Unfortunately, Canadian data for 1950 had not been assembled; the data for 1953 concerning Canadian Catholic hospitals are published for the first time.

The summary of the findings is set forth in Table 7. These data are summarized by state for the United States and by province for Canadian Catholic hospitals. Summary totals are also included. (See Table 7)

The comparative status of each of these three types of activities are presented in Table 8 Departmental Services, Table 9 Special Nursing Services, and Table 10 Out-Patient and/or Clinic Services. A review of these tables will show the status of each of the 27 services in Canada and the United States.

For Departmental Services (Table 8), three services—medical record library, laboratory and X-ray—show the highest percentages in the United States, both for 1950 and 1953, and likewise in Canada for 1953. This was to be expected since, for more than 30 years, emphasis has been placed on these special activities.

Less frequently available both in Canada and the United States are occupational therapy service, dental service, medical social service and rehabilitation service.

Significantly, only one service—the pharmacy—seems to reflect a significant decrease from 84.9 per cent to 78.8 per cent in the United States. This may be due to a number of reasons—the increasing number of small hospitals, the effect of licensing statutes in the various states, resulting in clearer distinction between the so-called "drug room" and a formal "pharmacy" service, and finally the government sponsored hospital construction programs in the United States and Canada.

Table 9 reflects the status of special nursing services. For the pediatrics nursing division, 37.6 per cent (compared with 20 per cent in 1950) of the Catholic hospitals in the United States now offer this service on a more or less substantial basis. Next in rank is the orthopedic service. Almost 20 per cent (18.3 per cent) of the Catholis hospitals have this service on an organized basis compared with 9.8 per cent for Canada. Significant in this compilation are the findings concerning facilities and services for the care of poliomyelitis patients—almost 10 per cent (9.6 per cent) now afford this special service. The present extent of this service in Catholic hospitals in the United States is about four times greater than in 1950.

Further study of this table reveals that for Canada 15.1 per cent of the Catholic hospitals offer a service for the care of the chronically ill. This rate is approximately three times greater than in the United States. Other variations concerning the extent of services in the United States and Canada may be studied in Table 9.

In Table 10 the extent of clinic services in formally organized out-patient departments or in hospitals having occasional clinic programs for out-patients is presented in summary form. It will be noted that 58.7 per cent of Canadian Catholic hospitals offer either of these services compared with 63 per cent for those in the United States. While these findings reflect commendable efforts in this area, it seems that more accurate reporting would yield significant data of the real extent of these services in Catholic hospitals.

In the area of special clinics, the summary reflects considerable progress in the United States. Accomplishment in Canadian Catholic hospitals is relatively almost as great.

It is truly heartening to note that in the United States almost one out of five (19.4 per cent) Catholic hospitals now offer this service, and in Canada one out of nine (11.5 per cent). Similarly, for the detection and care of cardiac disorders the progress is most satisfactory. This is true particularly for the United States, where for the three-year period the increase in this special area has been threefold.

These data are particularly significant for Catholic hospitals in Canada and the United States. More intensified community services by all hospitals are advocated by all health and medical agencies. Programs of a preventive character are especially emphasized; those for the care of ambulatory patients are urged everywhere; and broader hospitalization plans for in-patient care and early recovery are provided for in most new hospital programs.

NEW HOSPITALS

FOR the 35th (1954) Annual Directory of Catholic Hospitals and Allied Agencies, the addition of institutions developed during 1953 or taken over by various religious groups and not previously included in this directory is the smallest in more than ten years. Approximately 26 agencies have been dropped from the 1954 directory, 18 in the United States and eight for Canada; for the most part, these services were designated "Institutional" (Inst.) affording a very limited medical or nursing program.

Though numbering only 11, this year's group of new additions represents nine general hospitals having 425 beds and 66 bassinets, a sanatorium for the care of tuberculosis patients numbering 80 beds, and one institution of 1,000 beds in Canada for the care of mentally deficient patients. Geographically, eight are in the United States and three in Canada.

Involved in the conduct of these new Catholic services are 11 different religious groups. All but one of the groups are active in the hospital field; the Sisters of Our Lady of Mount Carmel (306) who have their motherhouse in New Orleans have taken over the recently rebuilt St. Joseph's Hospital in Thibodaux, Louisiana.

For those readers who desire more detailed information, the complete listings may be found in the directories (Tables II and III) following this section.

UNITED STATES

Napa, California
PARKS VICTORY MEMORIAL HOSPITAL
General Service 58 beds 12 bassinets
Sisters of St. Joseph of Orange (927)

West Palm Beach, Florida
PINE RIDGE HOSPITAL
General Service 50 beds 12 bassinets
Sisters of St. Francis (503)

Newellton, Louisiana
ST. CHARLES LEGION MEMORIAL HOSPITAL
General Service 30 beds 10 bassinets
Sisters of Charity of Incarnate Word (801)

Thibodaux, Louisiana
ST. JOSEPH'S HOSPITAL
General Service 40 beds 10 bassinets
Sisters of Our Lady of Mount Carmel (306)

Hastings, Minnesota
SALVE REGINA MEMORIAL HOSPITAL
General Service 50 beds 10 bassinets
Sisters of Charity of Our Lady, Mother of Mercy (1112a)

St. Louis, Missouri
ST. JOSEPH'S HOSPITAL
General Service 150 beds
Sisters of St. Joseph of Carondelet (941b)

Sea Isle City, New Jersey
MERCY HOSPITAL
General Service 22 beds 7 bassinets
Sisters of Mercy (1141)

Green Springs, Ohio
OAK RIDGE SANATORIUM
Tuberculosis Service 80 beds
Franciscan Sisters of Our Lady of Perpetual Help (512)

CANADA

Attawapiskat, Ontario
HOPITAL STE-MARIE
General Service 12 beds
Grey Nuns of the Cross of Ottawa (C701)

Montreal, Quebec
MONT PROVIDENCE
Service to the Mentally-Deficient 1,000 beds
Sisters of Charity of Providence (C1303c)

Zenon Park, Saskatchewan
NOTRE DAME DEL'ASSUMPTION HOSPITAL
General Service 13 beds 5 bassinets
Sisters of Notre Dame of Chambrac (C1201a)

THE CATHOLIC HOSPITALS

of the United States and Canada

Arrangement of the Directory

THE 1953 edition follows the styling of previous editions in its method of presentation of the state or province, of the individual hospital or agency arranged with three columns to the page, the Directory provides for listing each hospital vertically as a self-contained unit. Two groupings within each state and province are recognized—one for Hospitals and the other for Allied Agencies. The alphabetical order is observed throughout Tables II and III.

Officers of Hospitals and Agencies

The designation of officers appears at the right side of the officers name by means of the following symbols:

Superior	(S)
Administrator	(A)
Director of Nursing Service	(N)
The Reverend Chaplain	(C)
Chief of Medical Staff	(M)
Director (for certain Agencies)	(D)
Medical Director	(MD)

Professional and Educational Status

To supply as much information as possible and at the same time to conserve space, the compilers have employed the following symbols:

Joint Commission for Hospital Accreditation Ratings:

▲ Fully Approved

△ Provisionally Approved

Internship Approval:

★ American Medical Association (for United States)

★ Canadian Medical Association (for Canada)

Approval for Residency or Fellowship in a Specialty:

+ American Medical Association (for United States)

+ Canadian Medical Association (for Canada)

Teaching Hospital—affiliated with a Medical School:

☐ With a footnote placed at the end of the column stating the name of the medical school

◇ Hospital School of Nursing

◆ Hospital School of Practical Nursing

Abbreviations—Types of Service

The following standard abbreviations are employed throughout Tables II and III:

Cancer	Cancer
Cardiac	Cardiac
Chr.	Chronic
Conv.	Convalescent
Disp.	Dispensary
Drug	Drug
Epil.	Epilepsy
Gen.	General
Health	Health
Incur.	Incurable
Inst.	Institutional
Iso.	Isolation
Lepro.	Leprosy
Mat.	Maternity
Me. De.	Mentally Deficient
Nerv.	Nervous
N. & M.	Nervous & Mental
Orth.	Orthopedic
Ped.	Pediatric
Psych.	Psychiatric
T.B.	Tuberculosis
V.N.	Visiting Nurse

Departmental facilities and special nursing services are designated by the following code:

Symbol	*Service*
1.	Medical Record Library
2.	Laboratory Service
3.	Blood Bank
4.	Metabolism
5.	X-Ray Service
6.	Electrocardiographic Service
7.	Pharmacy
8.	Physical Therapy Service
9.	Occupational Therapy Service
10.	Dental Service
11.	Medical Social Service
12.	Rehabilitation
	Special Nursing Divisions
20.	Alcoholic
21.	Cardiac
22.	Chronically Ill
23.	Orthopedic
24.	Pediatric
25.	Poliomyelitis
26.	Psychiatric
27.	Tuberculosis
28.	Recovery Room.
C	Out-Patient and/or Clinic Service
C^1	Cancer Clinic
C^2	Mental Hygiene Clinic
C^3	Psychiatric Clinic
C^4	Heart Clinic
C^5	Alcoholics Clinic

Ownership of the Hospital or Agency

Following the name of the institution is the code number denoting the Religious group conducting it. Reference to Part IV will afford the reader full information concerning this code system.

Miscellaneous Code Letters, Symbols, etc.

To indicate certain qualifying conditions, the compilers have in addition used the following:

Ownership of the hospital where Sisters only operate it

N.B. This symbol is placed before the name of the hospital; a footnote at the end of column records the name of the owning group, whereas the code number following the name of the hospital designates the religious group responsible for its operation.

y Information incomplete

* To be opened

P&H®

The Physicians and Hospital Supply Co., Inc. of Minneapolis provides a modern, complete service for the hospital and medical profession. We supply nationally recognized products for every medical specialty. We are also the northwest distributor for the many quality products of the Ulmer Pharmacal Co.

KLER-RO (ULMER) . . . is a detergent that removes blood, plasma and tissue in minutes. It quickly solves your problems with film and stains. Each 2 lb. can gives you 42 gallons of full-strength KLER-RO solution. After brief KLER-RO rinse, instruments, glassware and linens are clean and safe.

LOBANA (ULMER) . . . is a smooth, refreshing body rub lotion. Best of all, it isn't greasy. Its soothing quality and low cost makes it the favorite for skin care in many hospitals.

PHENEEN SOLUTION (ULMER) . . . is a potent germicide that prevents rust, corrosion and contamination of medical instruments. Instrument storage can be prolonged without frequent solution changes. PHENEEN is odorless and non-toxic, thoroughly safe for hands.

SURGEL LIQUID (ULMER) . . . is a surgical lubricant for patient examination and instrumentation. It is pleasant to use and does not plug dispenser tips. Surgel liquid is packaged in polyethylene dispensers for each station. Also available is Surgel jelly in tubes.

To evidence the fine quality of these products, write for samples and literature.

Part II

Directory Arrangement

THE Directory of nursing education activities under Catholic auspices is divided into three sections:

I —Basic Nurse Education
- A. United States and Territories
- B. Canada

II —Practical Nurse Education
- A. United States and Territories
- B. Canada

III—Graduate Nurse Education
- A. United States
- B. Canada

Abbreviations for the diocese and the Religious Order numbers which appear in the entries are the same as those used for the Hospital Directory. Other symbols used in the Nursing Education Directory include:

General Education Accrediting Agencies (United States only):

C Accredited by the North Central Association of Colleges and Secondary Schools.

M Accredited by the Middle States Association of Colleges and Secondary Schools.

N Accredited by the New England Association of Colleges and Secondary Schools.

P Accredited by the Western College Association.

S Accredited by the Southern Association of Colleges and Secondary Schools.

W Accredited by the Northwestern Association of Secondary and Higher Schools.

Professional Accreditation (United States only):

◆P.H. Program approved as preparing for beginning positions in Public Health Nursing.

◆ Fully accredited by the National League for Nursing.

⊙ Approved for temporary accreditation by the National League for Nursing.

◖ Practical Nurse Program approved by the National Association for Practical Nurse Education.

> Practical Nurse Program approved by the state approving authority. In Canadian entries, this symbol indicates approval by the Provincial approving authority.

Enrollment:

E^1 Sister Students Enrolled.

E^2 Negro Students Enrolled.

E^3 Male Students Enrolled.

Clinical Facilities:

Medicine, surgery, pediatrics and obstetrics, unless otherwise indicated. B.

Communicable Disease	Comm. Dis.
Diet Therapy	D.K.
Medicine	Med.
Neurology	Neuro.
Obstetrics	Ob.
Orthopedics	Ortho.
Out-Patient Department	O.P.D.
Pediatrics	Ped.
Psychiatry	Psych.
Public Health	Pub. H.
Tuberculosis	Tb.
Venereal Disease Clinic	V.D.

Hospital Approvals:

▲ Fully approved by the Joint Commission for Hospital Accreditation.

△ Provisionally approved by the Joint Commission for Hospital Accreditation.

★ Approved by The American Medical Association for Internships.

+ Approved by The American Medical Association for Residencies and Fellowships. *N.B.* In Canadian entries, this symbol indicates approval by the Department of Hospital Services of the Canadian Medical Association.

□ Teaching hospital attached to a medical school—see footnote.

Miscellaneous Symbols:

X School not previously listed.

Y Incomplete information.

Z No admission—1953.

w Graduate Nurse Staff.

[ ] See Footnote.

Nursing Education

Catholic Nursing Education Facilities at the End of 1953

By MARGARET FOLEY, R.N., M.S.

INFORMATION about Catholic facilities for nursing education is presented in a new arrangement in the 1954 Directory. Previous issues have described basic professional programs and educational programs for graduate nurses in a single section. To more clearly identify the extent to which Catholic institutions participate in each of the three major types of nursing education, information appearing in this issue has been arranged in three sections:

I Basic Nurse Education describes state accredited schools offering diploma and basic degree programs.

II Practical Nurse Education describes schools of practical nursing under the control of a Catholic institution. Because of lack of complete information, the listing of Catholic hospitals cooperating with public and non-Catholic agencies in practical nursing education has been discontinued with this issue.

III Graduate Nurse Education describes programs in Catholic colleges and universities organized specifically for graduate nurses and offered at the baccalaureate or master's degree level.

Each section presents information about schools in the United States in Part A and about Canadian Schools in Part B. Table 1 identifies the total number of schools in each major area and the student enrollment, as well as the number of institutions sponsoring these programs and the total number of students enrolled in practical nurse, basic professional or graduate nurse education programs. In this summary, the total number of institutions (375) is less than the sum of the total schools for each of the three sections. The reason for this seeming discrepancy is that 33 institutions offer programs in more than one area, e.g., diploma and practical nurse programs or basic degree and graduate nurse programs. Of the

37,888 students reported, 33,735 are full-time students in practical nurse or basic professional programs; of the 4,153 graduate nurse students reported, only 1,088 or 26.2 per cent, are classified as full-time students.

IA. Basic Nurse Education

United States, Hawaii and Puerto Rico

Relationship to Total U.S. Schools

Occasionally it is of interest to consider in some detail the relationship of Catholic schools of nursing offering diploma and basic degree programs to all state-accredited schools of nursing in the United States. For this purpose, *Facts About Nursing,* the annual publication of the American Nurses' Association, and the annual Directory issues of HOSPITAL PROGRESS are useful. Because of a different method of reporting in the two publications and a difference in the date of publication, information presented in the 1953 Directory is comparable to that appearing in *Facts About Nursing,* 1953, which is published in 1954. For this reason, the relationship can be studied only for students enrolled in the academic year 1952-53 or in prior years.

Although the number of Catholic state-accredited schools of nursing decreased from 351 in December, 1949, to 345 in December, 1952, the relationship of Catholic schools to all U.S. schools increased slightly, from 29.5 per cent in 1949 to 30.4 per cent in 1952, indicating, at least, that Catholic schools have been maintained at approximately the same rate as is present for all state-accredited schools. During the same period, the relationship of enrollments in Catholic schools to all enrollments remained the same, 31.8 per cent in 1952.

The academic year 1950-51 was a peak enrollment period, with Catholic schools of nursing and all U.S. schools reporting the largest number of students since 1948. A comparison of enrollments for the academic year 1952-53 shows that nationally, schools decreased in number three per cent in the two year period and enrollments decreased 1.5 per cent. Catholic schools dropped by 1.8 per cent, but enrollment was down 2.5 per cent. The fact that Catholic schools admitted only 29.5 per cent of all students in 1951 and in 1952, while reporting 31.4 per cent and 31.9 per cent of all students graduated in those years may have some bearing on the enrollment decrease.

The average enrollment in Catholic schools of nursing consistently exceeds the average for the country as a whole by four to six students, reflecting, no doubt, the very large enrollments in a few Catholic central schools of nursing.

Another comparison of interest is the distribution of all enrolled students in degree and diploma programs. Data on this point reported in *Facts About Nursing* includes in the degree enrollment students in programs affiliated with a college or university which grants a degree; the Directory figures include only those students enrolled in a college-controlled four year degree program, accredited as such by the state. It is to be expected, then, that the percentage of students enrolled in a degree program, nationally, will be larger than that reported for Catholic schools.

Enrollment in all basic degree programs in the United States is reported to have increased from 8.7 per cent in 1949 to 12.5 per cent in 1952, with an overall increase in a two year period (1950-1952) of 38 per cent, accompanied by a five per cent decrease in diploma enrollment. The Directory, on the other hand, reports degree enrollment in Catholic schools at 6.9 per cent in 1949 and nine per cent in 1952, an increase of 36 per cent in degree enrollment between 1950 to 1952 and a simultaneous increase of two per cent in diploma enrollment in that period.

Catholic Schools of Nursing—1953

Information about Catholic schools of nursing in 1953 is analyzed in three relationships: the number of Catholic schools of nursing and the number of students admitted, graduated and enrolled, and the relative contribution of diploma and degree programs to total Catholic nursing education; significant facts about hospital schools as a group, compared with past information and, finally, degree programs as a group.

Section I of this Directory identifies 337 state-accredited Catholic schools of nursing in the United States, Hawaii and Puerto Rico, 10 less than appeared in the 1953 Directory. As of December 31, 1953, these schools reported a total of 32,893 students enrolled, a gain of 1.9 per cent over the previous year. Hospital and independent schools number 290 (86 per cent) and report 85.4 per cent of all students. Schools under college or university control number 47, or 14 per cent of all schools; enrollment in these schools is 14.4 per cent of the total. These 47 colleges include six offering only a diploma program; seven offering both diploma and degree programs; and 34 offering only a degree program. The 14.4 per cent of total enrollment credited above to collegiate schools is found to be distributed 9.9 per cent in degree programs and 4.5 per cent in diploma programs. When programs are counted rather than schools, it is found that 88.1 per cent of those offered in Catholic institutions are diploma programs and 11.9 per cent are degree programs. Since six of the basic degree programs have been established less than four years and have incomplete enrollments, it can be predicted that the contribution of degree programs to total enrollment will increase steadily in the next few years. As reported above, degree enrollment in 1952 accounted for nine per cent of the total and in 1949 for 6.9 per cent. In a five-year period, therefore, the relationship of degree enrollment to total student population in Catholic schools has gained less than three per cent.

Total enrollment for 1953 includes 678 religious in 168 schools; 524 Negroes in 123 schools (including one school with 86 Negro students); and 226 men in 41 schools (including one school with 88 men). Of the religious, 21.2 per cent are following a degree program. Only three men students and 9.9 per cent of the Negro students are in a degree program.

Of the 337 schools, 15 hospital schools, seven college degree programs and two college diploma programs have less than a full complement of

students because of no admissions in one of the prior years or because the school is recently established.

During 1953, 14 Catholic schools of nursing closed and four basic degree programs were established, resulting in a decrease of 10 in the total number of Catholic schools of nursing. Thirteen of the schools which closed were hospital schools, and 10 of these had been in the process of closing for three years. Other changes, not affecting the number of schools, include one school previously classified as college diploma, which was transferred to the hospital school group and one college previously listed as offering both diploma and degree programs, which has discontinued the diploma program.

Admissions

Included in the 337 schools listed are 12 hospital schools and one collegiate school (basic degree program) which did not admit students in 1953. In addition, two colleges with both diploma and degree students enrolled admitted no students in the diploma program. Four hospital schools and two college diploma programs did not admit students in 1952 or 1953 and are expected to close with 1954 graduations. One hospital school has admitted no students for two years, but expects to accept students in 1954. Some of the eight schools admitting no students for the first time in 1953 will close in 1955; others plan to admit students in 1954.

The 13,122 students admitted to 324 Catholic schools of nursing in 1953 represent an increase of 4.7 per cent over the previous year, despite the drop of 4.8 per cent in the number of schools reporting admissions. Of all schools admitting students in 1953, 40 are degree programs (12.2 per cent), and the 1,152 students admitted represent 8.7 per cent of total admissions. In comparison with 1952, more schools admitted degree students and admissions to degree programs jumped 12.3 per cent, while admissions to diploma programs increased by four per cent, with 12 fewer schools participating. A total of 214 religious were admitted to 92 schools, a total of 107 men students were admitted to 32 schools, and 232 Negroes were admitted to 93 schools.

In 14 states, admissions to Catholic schools declined, but in most cases the drop was not significant. It is of interest to note that, contrary to what might be expected, some of the largest losses occurred in states where all Catholic schools have either full or temporary accreditation. Regionally, decreases were noted in East South Central states, West South Central states and in the Mountain states. Table 2 shows the distribution of Catholic schools in the nine geographic regions of the United States and in the territories and the contribution of each region to total admissions, graduates and enrollment in Catholic schools in 1953.

Graduates

Although students are enrolled in 337 schools, only 324 of these report graduates during 1953. This difference is accounted for by six basic degree programs which will graduate their first students in 1955 or 1956, four hospital schools with initial graduates in 1954, and three hospital schools which admitted no students in 1950. In addition to the 324 existing schools graduating students in 1953, 11 schools graduated their last students in that year, bringing to 335 the number of schools and 9,227 the number of graduates. As compared with the previous year, the number of schools reporting graduates has decreased 2.6 per cent, while the number of students has increased 1.2 per cent. Of all schools reporting graduates, 10.7 per cent were colleges offering basic degree programs, but these programs contributed only 5.4 per cent of all students graduated. This is due, in part, to the fact that nearly one-third of the colleges reporting degree graduates were graduating their first or second class.

If we assume that students graduating from diploma programs in 1953 were admitted in 1950, it is found that approximately 72 per cent of those admitted completed the program. Even allowing for the transfer of students into the schools as upper classmen, and for a few students admitted prior to 1950 but delayed in completing the program, it would seem that the loss has been approximately 30 per cent.

Information on 1949 admissions was available for 29 of the 36 degree programs reporting 1953 graduates, and it is found that in these schools, 68.8 per cent of the students admitted completed the program in 1953.

Included in the 1953 graduates were 196 religious, 74 men, and 96 Negro students.

Accreditation

When the first list of schools approved for temporary accreditation was published in August, 1952, there were 84 Catholic schools which had received neither full nor temporary accreditation from the National League for Nursing, or 24.6 per cent of the 341 schools then in existence; 10 of these did not seek temporary accreditation. Since that time, some of the non-approved schools have closed, as well as a few which were approved for temporary accreditation, and new schools have been established which have not yet applied for accreditation. At the time this Directory was being prepared, after the November 1953 meetings of the Boards of Review, there were but 51 Catholic schools not accredited by the National League for Nursing, or 15.1 per cent of the 337 existing schools, including 11 which have not applied. (See Table 3.)

Of all students enrolled in Catholic schools of nursing at this time, 30.9 per cent are in schools with full accreditation; 61.7 per cent are in schools with temporary accreditation; and 7.4

Table 2. Percentage Distribution of Catholic Basic Programs in the Geographic Regions of the United States

Regions	*Per Cent of All Catholic Schools*	*Per Cent of Students—1953*		
		Admitted	*Graduated*	*Enrolled*
New England States	7.7	8.7	9.9	8.9
Middle Atlantic States	19.9	20.1	21.4	21.1

Pacific States	7.1	6.9	6.1	6.6
Hawaii and Puerto Rico	0.6	0.7	0.7	0.7
TOTAL	100.0	100.0	100.0	100.0

per cent are in schools with no national accreditation. The latter figure includes students enrolled in six new degree programs and in five hospital schools which did not apply for temporary accreditation.

In comparison with the position of Catholic schools in 1952, the per cent of schools with full or temporary accreditation has risen from 75.4 per cent in August and 79.9 per cent in December 1952 to 84.9 per cent in 1953.

Chart 1 compares the distribution of enrollment in all Catholic schools according to the accredited status of the school with that found in diploma programs and in degree programs. Slightly over half of all students enrolled in a basic degree program are in fully accredited schools, as compared with 28.5 per cent of diploma students. However, a larger proportion of degree students are found in non-accredited programs (12.5 per cent) than is true for diploma students (6.8 per cent).

Approximately 82 per cent of all non-accredited schools have 75 or less students enrolled. In contrast, 43.1 per cent of the temporary accredited schools and 9.4 per cent of those fully accredited are of this size. Table 4 shows the contribution of programs in each size group to total enrollment, according to accredited status, for the 320 programs with students enrolled in all years.

Non-Collegiate Schools

As pointed out earlier, the 290 non-collegiate schools listed in this Directory constitute 86 per cent of all Catholic state-accredited schools of nursing and enrolled 85.4 per cent of all students in 1953. The number of schools has decreased by 12 in the past year, and by 18 since 1951, while

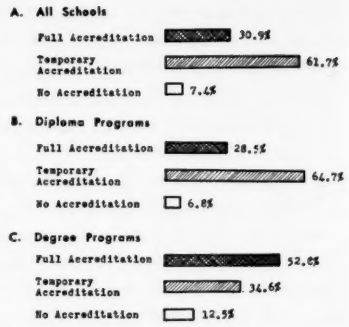

Chart 1. Distribution of total enrollment according to accredited status and type of program.

students have increased from 27,868 in 1951 and 27,839 in 1952 to 28,288 in 1953.

The average enrollment for non-collegiate schools in 1953 is 97 students, as compared with 92 in 1952. However, 15 of these schools have less than three full years enrolled. The average for 275 schools with students in all three years of the program is 101 students. There are nine central schools with a total of 2,032 students, or an average of 226 students per school. When these are discounted, the average for schools with full enrollments is 97 students.

Table 5 shows the distribution of schools according to student population and the contribution of each size group to total enrollment in Catholic schools. In schools of 50 students or less, little change is apparent from the distribution found in 1952. The principal shift noted was in the schools with 51-100 students enrolled where the emphasis has changed to schools of 51-75 students from the 1952 distribution which favored the 76-100 group. Graph 1. shows the size range of non-collegiate schools with full enrollments according to status in national accreditation.

Catholic population in non-collegiate schools ranges from 100 per cent (11 schools) and 99 per cent plus (nine schools) to two schools with an enrollment of less than 10 per cent Catholic. The median is a Catholic population of 68.5 per cent. In the New England region and Middle Atlantic states, no school reports a student body of less than 89.9 per cent Catholic. Eleven of the 16 states in the East South Central and West South Central regions report less than 55 per cent of the students enrolled in Catholic schools are Catholic. In the East North Central and West North Cen-

tral regions, Catholic schools in 10 states report between 64.4 and 85.2 per cent Catholic enrollment and in two states, 52.8 and 56.2 per cent. Of the nine states in the Mountain and Pacific regions which have Catholic schools, five report less than 50 per cent Catholic students enrolled.

Clinical Facilities

Only 10 of the 275 schools with full enrollment are associated with hospitals of less than 100 beds as compared with 26 schools in 1951. (Table 6.) This change is not due entirely to closing of schools, although this year, four of the schools which are in the process of closing are in this size group. Additions to hospitals have increased facilities resulting in the shift toward schools associated with larger home hospitals. However, the construction of new hospitals in some localities may play a part in the inability of some of the smaller hospitals to maintain their schools. Since patients have a wider choice in the selection of hospitals, particularly in rural areas, the daily average patient census of existing institutions may be affected, with the result that it becomes difficult to meet minimum requirements for state approval for a school of nursing.

Collegiate Schools

The 47 colleges and universities offering state accredited basic programs in nursing include 34 offering a degree program only; six offering a diploma only; and seven offering both degree and diploma programs—a total of 41 degree and 13 diploma programs.

The small number of diploma programs under college and university control does not warrant detailed description. With few exceptions, it has been found that enrollment in the degree program continues to be low as long as the diploma program is continued and, for the past several years, there has been a noticeable reduction in the number of schools offering both degree and diploma programs. For example, in 1951 there were 12 Catholic colleges with students enrolled in both degree and diploma programs; in 1952, there were eight such schools and in 1953, there were seven. Colleges offering only degree programs have increased from 25 in 1951 to 34 in the current year. This increase results both from new degree programs established and from colleges discontinuing a diploma program but retaining a degree program. In 1953, college diploma programs were the only group to show an enrollment drop (8.5 per cent) and the only group which admitted less students than in 1952 (3.3 per cent decrease). The number of graduates from college diploma programs increased by 10.5 per cent in 1953.

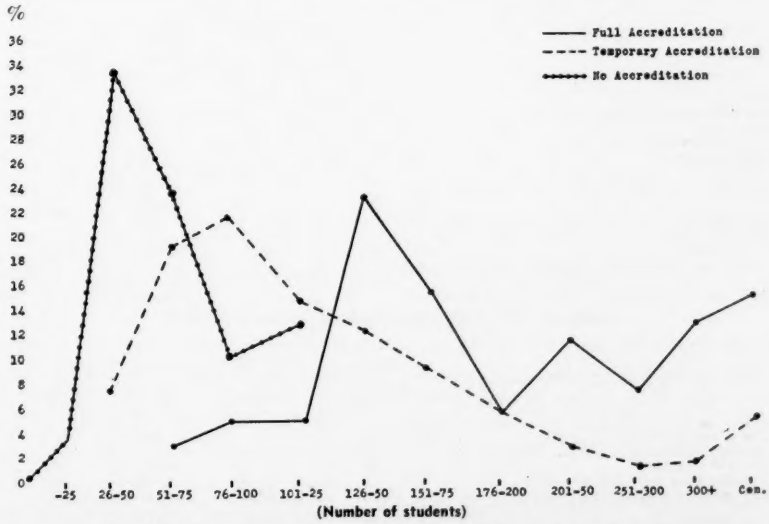
Degree Admissions

A total of 1,152 students were admitted to 40 basic degree programs in 1953 including six programs in schools which report students enrolled in a diploma program as well. The average admission to degree programs was 29 students per school. In schools offering the degree program only, the average was 30 students; in the six diploma-degree schools, the average admission to degree programs was 24 students.

In 50 per cent of the cases, total admissions to degree programs were in groups of 25 or less students. All of the non-accredited degree programs were in this category as compared with 33.3 per cent of the temporary accredited schools and 19.9 per cent of the fully accredited schools. Four schools admitted more than 50 students—three of these schools are fully accredited and one has temporary accreditation. Seven schools admitted 10 or less students, while the largest number of students admitted in one school is 85 students. Religious admitted to these programs total 56, reported by 20 schools. Twenty-three Negroes were admitted in 11 schools.

Enrollment

Of the 34 degree programs with students enrolled in all four years, 28 are in institutions offering degree programs only and, in these schools, the average enrollment is 99 students. In six institutions offering both diploma and degree programs, the average degree enrollment is 67 students. Nearly



Graph 1. Size of non-collegiate schools according to accredited status.

one-fourth of all degree programs have a total student enrollment of 25 to 50 students (eight schools). Programs serving over 100 students number 13, including two with 212 to 217 students and 11 programs with between 100 and 159 students.

Enrollment in the 37 degree programs from which information was received is 94.3 per cent Catholic. Catholic population ranges from 71 and 74 per cent in two schools to two schools with 100 per cent Catholic enrollment. One school reports 26 religious enrolled; in all, 144 religious are enrolled in the basic degree program in 25 schools and 52 Negroes are enrolled in 16 schools. Only three men students are reported, one in each of three schools.

Degree Graduates

Students were graduated from 35 degree programs but the number of graduates was only 504 with individual schools reporting from three to 43 students completing the basic degree program in 1953. In 40 per cent of the schools, 10 or less students were graduated; 12 schools graduated between 11 to 20 students; and seven schools graduated 20 or more students. Included in the graduates were 32 religious (14 schools), four Negroes (four schools) and two men (one school).

IB. Basic Nurse Education

Canada

Nearly half of all provincially approved schools of nursing in Canada exist under Catholic auspices. The 80 Catholic schools identified in this Directory are conducted by 34 religious orders and one lay Catholic group. In the Province of Quebec, 87 per cent of the approved schools are under Catholic auspices. In two provinces, Saskatchewan and New Brunswick, Catholic schools comprise 50 per cent of the total. In each of the remaining seven provinces, about one-third of the schools are Catholic.

In 1953 there were 7,657 students enrolled in 80 Catholic schools of nursing in Canada. One of these schools is a college diploma program with 88 students enrolled; the remainder are hospital schools. Religious students are enrolled in schools of nursing in all provinces except Newfoundland, with a total of 246 religious in 51 schools. The Province of Quebec, with 143 student religious, reports the largest number, while the Province of Alberta, with two student religious, has the smallest number enrolled. There are 17 Negro students in 10 schools in four provinces and seven men enrolled in five schools in British Columbia, Ontario, Quebec and Saskatchewan.

Data on enrollment in 1952 was incomplete for four provinces with a total of seven Canadian schools not reporting. Enrollment in 71 reporting schools in 1952 was 6,885 students as compared with 7,657 students in 80 schools in 1953. This represents an increase of 12.7 per cent in the number of schools reporting and an increase of 11.2 per cent in the number of students. Of the six provinces for which complete information is available in both years, five show a gain in enrollment. In numbers of students added, Ontario has the largest gain (109 students). Enrollment dropped in only one province and less than one per cent (British Columbia, 0.9 per cent). Table 7 shows the distribution of Catholic schools of nursing in Canada among the 10 provinces in 1953 and of students enrolled in these schools. In two provinces, Ontario and Quebec, are found 64.9 per cent of Catholic schools and 64.5 per cent of enrolled students.

Of the 80 schools, 76 have students enrolled in all three years of the diploma program. The size of these schools is shown in Table 8. There seems to be an increase in the number of schools with a student population of 50 or less, since 31.5 per cent of the schools are in the smallest size group in 1953, as compared with 25.4 per cent of the reporting schools in 1952 and 29.8 per cent in 1951. Four schools in this group have a total enrollment of 25 or less students. However, a larger percentage of schools and students are in the 151-200 and over 200 student group in 1953 than in either of the two previous years.

Admissions

One school admitted no students in 1953. In 79 schools, a total of 2,905 students were admitted, an increase

Table 7. Distribution of Catholic Schools of Nursing and Enrolled Students in Ten Provinces of Canada

Provinces	*1953*			
	Number of Schools	*Per Cent of Schools*	*Number of Students*	*Per Cent of Total Enrollment*

TOTAL	76	100.0	7,572	100.0

of 8.4 per cent over 1952 admissions in the 73 reporting schools. Eight of the 10 provinces admitted more students in 1953, but the percentage increase in two provinces would be influenced by four schools for which information was not available in 1952.

Nearly half of the schools admitted 25 or less students in 1953 (See Table 9), including 21 schools (26.6 per cent) admitting under 16 students in the year. This finding would help to explain the increase in the number of schools with total student population of 50 or less, reported above.

Graduates

There were 2,232 students completing the diploma program in 76 schools of nursing in 1953. Graduates included 58 religious, five Negroes and two men. One school in the Province of Alberta will graduate the first class in 1956. Three schools in the Province of Quebec had no students completing the program in 1953.

Clinical Facilities

A study of the bed capacity of the home hospital for the 79 hospital schools reveals little change in the distribution of schools in 1953 as compared with reports in the 1952 Directory. There has been a significant shift, however, in the distribution of enrolled students on the basis of the size of the home hospital. In 1951, 39 per cent of the students were enrolled in schools associated with hospitals of over 400 beds. In 1952, 39.9 per cent of the students were found in these schools. In 1953, there were 18 schools associated with hospitals of over 400 beds (the same number of schools was found in 1951) and the enrollment in these 18 schools was 44.1 per cent of all enrollments.

IIA. Practical Nurse Education

United States

Despite estimates that 15,000 practical nurses should be graduated annually, there were in 1953 only 282 schools of practical nursing approved by a state authority or by the National Association for Practical Nurse Education. Section II of this Directory identifies a total of 27 Catholic schools of practical nursing including two located in states where there is no provision for school approval. As of December 31, 1953 these schools reported an enrollment of 767 students, including 25 religious, eight men, and 133 Negroes.

The 27 schools of practical nursing are located in 17 states and in the territory of Puerto Rico, only three states reporting more than two schools: Colorado—three schools; Massachusetts—three schools; and Ohio—four schools. Of the 17 religious orders engaged in this field of nursing education, only three operate more than one school: Religious Sisters of Mercy—six schools; Sisters of Charity of Cincinnati—five schools; and Sisters of St. Joseph, O.S.F., South Bend, Indiana—two schools. None of the schools identified in this Directory were in existence prior to 1945 and half have been established since 1950, five in 1953. Six schools were established after a diploma program was discontinued. Six others are found in hospitals which also conduct a diploma program or participate in a diploma or degree program under the control of another institution. One school, located in a southern state, has an all Negro enrollment.

Clinical Facilities

The size of the hospital with which the practical nurse school is associated varies from 40 to 800 beds, with two central schools reported. Table 10 shows the distribution of schools and students according to the bed capacity of the home hospital. As shown in Table 11 all but five of the hospitals conducting practical nurse schools are approved by the Joint Commission on Accreditation of Hospitals.

Size of Schools

Since the recommended curriculum for practical nurse education is 12 months, there is little difference between the enrollment in practical nurse schools and the number of students admitted except in two schools which offer an 18-month program. Information about 1953 admissions is available for 25 schools with a total of 775 students reported. The majority of the schools accept students in two classes annually, with seven schools reporting one class admitted.

In schools with one admission date the size of classes admitted ranges from seven to 44 students and the average admission was 22 students. In the 18 schools with two admission dates, total admissions for the year range from 10 to 105 students with an average of 34 students. In these

Table 9. Distribution of Canadian Schools According to 1953 Admissions

Number of Students Admitted	*Number of Schools*	*Per Cent of Schools*	*Total Admissions*	*Per Cent of Total Admissions*
25 or less students	36	*45.6*	503	*17.3*
26– 50 students	24	*30.5*	871	*30.2*
51– 75 students	10	*12.7*	620	*21.3*
76–100 students	5	*6.3*	407	*13.9*
101 or more students	4	*4.9*	504	*17.3*
TOTAL	79	*100.0*	2,905	*100.0*

Table 10. Distribution of Schools of Practical Nursing in the United States According to Bed Capacity of Home Hospital

Size of Home Hospital	*Number of Schools*	*Per Cent of Schools*	*Number of Students*	*Per Cent of Students*
100 or less beds	9	*33.3*	169	*22.0*
101–200 beds	10	*37.1*	306	*39.9*
201–300 beds	3	*11.1*	112	*14.6*
301–400 beds	1	*3.7*	44	*5.7*
401 or more beds	2	*7.4*	78	*10.2*
Central schools	2	*7.4*	58	*7.6*
TOTAL	27	*100.0*	767	*100.0*

schools, however, the size of the spring class was from four students (three schools) to 40 students; the fall class, from six students to 65 students. For all classes admitted during the year, 25.6 per cent were groups of 10 or less, 45.5 per cent were from 11 to 20 students, 13.9 per cent from 21 to 30 students, 6.9 per cent from 31 to 40 students and 6.9 per cent were groups of 40 or more students.

There is little correlation between the size of the home hospital and the number of students admitted in one year. For example, one of the schools associated with a hospital of 50 or less beds admitted two classes—one of 14 and one of 16 students, or a total of 30 students for the year. This exceeds the number of students admitted in seven of the ten schools associated with hospitals of between 51 and 150 beds and exceeds three of the five schools associated with hospitals between 151 and 200 beds.

Of the 18 schools reporting February classes admitted, nine have had no withdrawals in an eight month period. Fourteen schools, including eight with two admission dates, reported enrollment figures equal to the number of students admitted for the year.

Little more than half of the students enrolled in 22 schools which provided information on this point are Catholic (59 per cent). The percentage in individual schools, however, ranged from 2.9 per cent Catholic enrollment in one school to two schools with an enrollment of 92 and 93 per cent Catholic students.

One or more affiliations are reported by 10 schools, six of which are associated with home hospitals of 100 beds or less. In 1953, 431 students were graduated from 20 Catholic schools of practical nursing; four schools will graduate their first class in 1954; no information was available for three schools. Graduates included 54 Negroes (11 schools), two men (two schools), and 13 religious (seven schools).

TOTAL	13	*100.0*	249	*100.0*

IIB. Practical Nurse Education

Canada

Relatively little is known about the practical nurse programs in Canada. Partial reports were received from 13 schools conducted by 12 different religious orders. Eight of these schools are located in the Province of Quebec, four in Ontario, and one in New Brunswick. A total of 203 students are enrolled. Two schools are associated with hospitals tentatively approved by the Joint Commission on the Accreditation of Hospitals.

Ten schools reported on length of programs. Of these, eight offer a curriculum of 18 months, one a curriculum of 12 months, and one a curriculum of nine months.

The number of students admitted and graduated is known for only seven schools. These schools report 114 students entering during 1953 in classes ranging from 10 to 26 students. Six of the schools admitted two classes during the year. A total of 65 students were graduated from the seven practical nurse schools reporting.

Table 12 shows the distribution of schools and of students according to the capacity of the home hospital. Four schools are associated with hospitals of 10 or less beds, six with hospitals of 101 to 200 beds, two with hospitals of 201 to 300 beds, and one school is associated with a hospital of over 300 beds.

III. Graduate Nurse Education

Catholic institutions offering programs for graduate nurses in 1953 numbered 45, four less than reported in 1952. Of these, 15 are colleges and universities which do not offer a state-accredited basic program in nursing. All of these institutions offer programs leading to a baccalaureate degree; 13 report R.N.'s enrolled in a master's degree program, but only six grant master's degrees in nursing or nursing education.

Information for this Directory was furnished by 42 of the 45 colleges and universities. Total enrollment in programs leading to a bachelor's degree was 3,762 students of which 973 are full-time (25.8 per cent) and 2,789 are part-time (74.2 per cent). Enrollment increased by 130 students over 1952 but the same ratio of full to part-time students is found. There are 297 religious enrolled in 26 schools; 86 Negroes in 13 schools; and 38 men enrolled.

In programs leading to a master's degree, 391 students are enrolled: 115 full-time (29.4 per cent) and 276 part-time (70.6 per cent). Enrollment increased by 159 students over 1952. Part-time students increased from 59 per cent to 70.6 per cent of the total enrollment.

Comparable national data is not available for 1953. However, *Facts About Nursing,* 1953, reports that in 1952 there were 94 institutions engaged in graduate nurse education in the United States with an enrollment of 11,077 students, 72 per cent part-time, and 1,923 baccalaureate degrees, 498 masters and three doctoral degrees were granted.

Catholic schools in 1952, reported in the 1953 Directory, represent 52 per cent of the United States programs and 39.6 per cent of the enrollment; 74 per cent of the graduate nurse students in Catholic schools were part-time; 727 baccalaureate degrees were granted (37.8 per cent of national), 51 masters degrees (10.2 per cent), and no doctoral degrees.

Baccalaureate degrees were granted to 657 R.N.'s in 1953 by 36 colleges, 9.2 per cent less graduates than 1952 (70 students); a total of 87 masters degrees were granted, 36 more than in 1952.

Both Table 13 and Table 14 show the effect of recent changes in graduate nurse programs which place specialization in the master's curricula. Enrollment in the generalized B.S.N. programs has increased from 62.2 per cent to 77.5 per cent of total, apparently at the expense of enrollment in all other programs. Graduates of B.S.N. programs have increased from 21.3 per cent to 44.7 per cent of total, with significant drop in the percentage of graduates coming from B.S. and B.S.N.E. programs.

Twenty-nine schools offer a curriculum leading to a single degree including: B.S.—six schools; B.S.N.—20 schools; and B.S.N.E.—three schools. The remaining 13 schools have students enrolled in curricula leading to two or more degrees including B.S.—three programs; B.S.N.—12 programs; B.S.N.E.—12 programs and B.S.P.H.N.—seven programs. The schools offering but one degree program report some of the smallest enrollments as well as the largest: 50 per cent have less than 20 students enrolled including both full and part-time students; 12 report 21-68 students enrolled; and only two schools have 100 or more students enrolled. Schools offering more than one degree include three with a total enrollment between 13 and 51

* Some college offer two or more programs.

students, but the remaining 10 schools range in size from 133 to 458 students. Table 15 shows the distribution of all baccalaureate programs according to total enrollment. Since 1952, there has been a slight decrease in the number of schools with 10 or less students enrolled.

There is wide variation, too, in the number of baccalaureate degrees granted by these schools during 1953. The five schools granting B.S. degrees report from two to 17 graduates; 23 schools report from one to 51 B.S.N. degrees granted, but over half of these schools graduated less than 10 students and only four had more than 25 graduates; 20 schools granted B.S.N.E degrees in numbers from one to 24, but 50 per cent had less than 10 graduates. Degrees in Public Health Nursing were granted by nine schools; five of these had less than 10 graduates and four schools between 10 and 18 graduates.

Masters Degree Programs

There are 327 students enrolled in six colleges offering masters degree programs in nursing or nursing education, 83.4 per cent of all students reported in masters degree programs. Seven additional colleges report a total of 64 graduate nurses enrolled in masters degree programs in education or other fields. In the masters programs, 29.4 per cent of all students are classified as full-time. Seven colleges report a total of 100 religious enrolled in these programs. A summary of enrollment in masters degree programs and degrees granted in 1953 is found in Table 16.

Table 15. Number of Graduate Nurse Students Enrolled in Baccalaureate Degree Programs

Total Graduate Nurses Enrolled	*Number of Schools*	*Number of Graduate Nurses Enrolled*
10 or less students	5	33

Part III

EDUCATION FOR HOSPITAL SERVICE

COURSES OFFERED IN THE HOSPITAL SPECIALTIES BY CATHOLIC UNIVERSITIES, COLLEGES AND HOSPITALS

Introduction

IN THE earlier issues of this Annual Directory, beginning in 1934, the compilers presented data on this subject. With the 1946 issue of the Directory, this feature was discontinued. In response to many requests for information concerning material of this special field, the compilers are reinstating this feature as a regular division of the Annual Directory.

For further information concerning a particular hospital offering courses in one or several of these specialties, the reader can refer to Part I of this Directory, Hospital and Health Services, in which (in Table II) are included for each hospital data respecting professional ratings, departmental facilities, educational relationships, type of service, capacity, officers, etc. For details concerning content and length of course in any one specialty, it will be necessary to write to the hospital, university, or college for catalogs, course outlines, etc.

Since the areas embraced in this section are subject to "approval" by particular professional groups, it is suggested that the inquirer consult Appendix B, Health Care Facts and Figures, Table H14, which lists all such "approval" agencies. In addition, it is suggested that the inquirer contact the particular agency interested in a special field regarding educational and professional requirements, i.e., medical records—American Association of Medical Record Librarians. Appendix B, Professional and Government Agencies of Canada and the United States having Hospital Interests is a compilation of all such agencies with addresses and other pertinent information.

Summary

The extent to which Catholic hospitals carry on educational programs may be realized from a review of the table appearing below. As many as 350 Catholic hospitals now conduct schools of nursing and over 200 of them have organized intern and resident medical programs in the United States; similarly for Canada, 77 Catholic hospitals operate schools of nursing and about 25 have approved intern and resident medical programs. In addition, Catholic hospitals and institutions of higher learning numbering 309, offer the following:

Specialty	*Number of Courses* United States	*Canada*
Medical Record Library Science	32	10
Medical Technology	203	24
Radiological Technology	207	25
Pharmacy	37	10
Dietetics	34	11
Physical Therapy Technology	14	6
Occupational Therapy Technology	6	1
Medical Social Service	9	3
Anesthesia (for Nurses)	35	2
Hospital Administration	17	3
Hospital Accounting	6	1
Medical Photography	8	6
Total Institutions	608	102

The frequency of courses in the table above reveals the influence of the Hospital Standardization Program of the American College of Surgeons. The highest frequency is for medical technology, 144, followed in rank by radiological technology with 85.

Arrangement

A review of the listings in Table II will yield only general information concerning the name and address of the institution. The particular courses offered by individual institutions are presented by means of symbols (numerals) appearing in italics to the right of the name of the institution.

This code of symbols embraces the following:

Symbol	*Hospital Specialty*
1	Medical Record Library Science
2	Medical Technology
3	Radiological Technology
4	Pharmacy
5	Dietetics
6	Physical Therapy Technology
7	Occupational Therapy Technology
8	Medical Social Service
9	Anesthesia (for Nurses)
10	Hospital Administration
11	Hospital Accounting
12	Medical Photography

Mystery "lotion B" turns out to be . . .

In a report on a year-long study* of "Skin Rashes during the Newborn Period", the author** discusses the effects of two lotions used on infants . . . Lotion A and Lotion B.

OF LOTION B . . . he writes: ". . . the particular *non-drying* effect of the one with a cholesterol-type base (Lotion B) . . . was demonstrated, and its routine use in the prevention and treatment of dermatoses in infants suggested".

The very effective "Lotion B" turns out to be . . . MENNEN BABY MAGIC SKIN CARE. *You* will find it as non-drying and helpful as did the author.

*Study conducted at The Hahnemann Medical College and Hospital of Philadelphia.

**Fischer, C. C. Clinical Study of Skin Rashes during the Newborn Period, Am. J. Dis. Child. 85: 688-693, 1953.

RELIGIOUS ORGANIZATIONS ENGAGED IN HOSPITAL AND NURSING EDUCATION ACTIVITIES

Part IV

PUBLISHED for the first time in 1937 in this Directory, this feature has been of inestimable value to many as a means of accurately identifying the many groups responsible for the conduct of the more than 2,000 (including nursing education programs) agencies of the Church active in this field. In 1949, there was included the added feature of the names and addresses of the hospitals and agencies operated by each religious group. While every effort is made to record all changes in organization of the almost 300 separate groups under Higher Superiors (i.e., Provincials and Generals) in Tables II and III, the compilers have not been able at all times to secure complete information on all.

To provide for Canada and the United States in the coding plan, Table II has been prepared to embrace only the United States and its Possessions while Table III is reserved for Canada and its Territories.

This feature changes with the publication of each annual edition of the Directory in order to incorporate newly opened hospitals under Catholic auspices and to record other changes. Invariably each year new groups of religious enter the hospital or nursing education field and these too must be provided for in Tables II and/or III.

Because the names of the various religious groups are in some instances lengthy or, in other cases, the same or similar to those of other religious groups also active in this field, the Editors have devised a code number system by which to identify each of the organizations. In developing this plan, it was necessary to distinguish between orders of men and women. This was accomplished by using as a prefix to the code number the letter "M" to designate each order of men. To distinguish between Canada and the United States, the letter "C" was employed as a prefix to each Canadian code number. For Newfoundland, the letter "N" was used as the prefix.

The sequence of the various orders and congregations here listed is alphabetical by a significant word in the title of each of the religious organizations.

When reference is made to the order, congregation, or organization owning or conducting an institution, the code number in parentheses, placed to the right of the name or address of the institution, designates this fact.

When a hospital conducts a school of nursing "s" is placed

usually at the end of the last line of the entry for the individual institution; for a college engaged in nursing education activities "ne" is placed after the last line of the entry; and for an agency conducting a program for practical nurses, the abbreviation "pn" is used similarly.

Detailed information concerning the hospitals, agencies and other institutions added in this year's edition may be found in the summaries. The names of institutions published previously but omitted from this year's Directory are also recorded in the summaries preceding the Directory Tables.

Groups	*Code Numbers*
United States	
Religious Orders of Men	M1-M8
Religious Orders of Women

University of Ottawa
School of Nursing
30 Stewart St.
Ottawa, Ontario, Canada (ne)

Appendix A

PROFESSIONAL AND GOVERNMENT AGENCIES IN HOSPITAL SERVICE

Introduction

WHILE the "care of the sick" is the primary purpose of general and special hospitals, the other responsibilities and objectives of these institutions must not be overlooked—they include education for the professions, health education for patients and the public, research, etc. Though owned by various groups, government or non-government, it might be well to point out, too, that the hospital is the "workshop" of the medical profession—wherein the "sick" receive medical care from the physician in accordance with professional and scientific standards developed and promulgated by many medical groups of a general or specialized character.

Educational activities by the hospital—especially on behalf of nurses—are governed by standards promulgated by outside agencies. Educational programs in which the hospital cooperates are likewise governed by set standards. In many areas, hospitals act as cooperating agencies, subject to the observance of professional standards in the care of patients, the education of students, etc.

Realizing how varied are the activities of the hospital and how extensive its professional and government relations must be, the Editors of this Annual Directory some years ago recognized how helpful to the administrator and her staff might be a listing of all such groups. Such a listing would include various groups having direct and indirect interests in general and specialized hospital services.

Since there are approximately 150 agencies for Canada and the United States, the following groupings were employed for classification purposes:

I. International and National Hospital Associations
II. National Medical Associations
III. Special Medical Groups
IV. International and National Nurses' Associations
V. Related Professional Societies Having Hospital Interests
VI. Professional and General Educational Agencies
VII. National Dental Associations
VIII. National Public Health and Welfare Groups
IX. Related General Organizations
X. Government Agencies

An index arranged alphabetically affords easy access to the listing of particular agencies concerning which the reader may be seeking information.

For each organization an attempt was made to present the following data: name, year of establishment, address of central office, addresses of other offices (if any), principal officers, councils or committees concerned with hospital service, publications—including those devoted to hospital services, standards, etc. For each journal, the following information is given if available—name, year of establishment, frequency of publication, and annual subscription fees.

In this connection, it might be well to refer the reader to Table H14 . . . in Appendix B Health Care Facts and Figures. This Table deals with "Approval Agencies for Hospital Services and for Professional Education Programs" — lists the special areas requiring "approvals" and the agencies entrusted with the enforcement of these "approval" programs.

APPENDIX A. VARIOUS PROFESSIONAL AND GOVERNMENT AGENCIES OF THE UNITED STATES AND CANADA HAVING HOSPITAL INTERESTS

I. INTERNATIONAL AND NATIONAL HOSPITAL ASSOCIATIONS

Inter-American Hospital Association
Pan-American Sanitary Bureau, Washington 8, D.C.

Officers
Guillermo Almenara, M.D., *President*
Federico Gomez, M.D., *Secretary*
Felix Lamela, *Executive Director*

International Hospital Federation
10 Old Jewry, London, E.C.2, England
Capt. J. E. Stone, *Honorary Secretary*

American Hospital Association (1899)
Central Office: 18 East Division Street, Chicago 10, Illinois
Washington Office: 1756 K Street, N.W., Washington 6, D. C.

Officers
Ritz E. Heerman, *President*
John N. Hatfield, *Treasurer*
Edwin L. Crosby, M.D., *Executive Director*

Publications
HOSPITALS (1927), Official Journal; Monthly; Annual Fee, $3.00
AMERICAN HOSPITAL DIRECTORY, Annual
Special Publications and Monographs are also available

American Protestant Hospital Association (1920)
Station A, Drawer 7, Evansville 11, Indiana

Officers
Lee S. Lampher, *President*
Albert G. Hahn, *Executive Secretary*

Publications
ASSOCIATION BULLETIN, Bi-monthly

Canadian Hospital Association (1931)
280 Bloor Street, Toronto (West) 5, Ontario, Canada

Officers
A. C. McGugan, M.D., *President*
A. L. Swanson, M.D., *Secretary*

Publications
CANADIAN HOSPITAL (1924), Official Journal, Monthly, Annual Fee $2.00
Special Bulletins and Committee Reports are also available.

Catholic Hospital Association of the United States and Canada (1915)
Central Office: 1438 South Grand Boulevard, St. Louis 4, Missouri
Canadian Office: Catholic Hospital Council of Canada, 1 Stewart St., Ottawa, Ontario
Rev. H. M. Legare, O.M.I., *Executive Director*
Washington Office: Bureau of Health and Hospitals, 1312 Massachusetts Avenue, N.W., Washington, D. C.
Msgr. D. A. McGowan, *Director*

Officers:[1]
*Rev. Francis P. Lively, Brooklyn, N.Y., *President*
Rev. John J. Flanagan, S.J., *Executive Director*
Mr. M. R. Kneifl, *Executive Secretary*

Publications
HOSPITAL PROGRESS (1920), Official Journal, Monthly, Annual Fee $3.00
DIRECTORY OF CATHOLIC HOSPITALS, Allied Agencies and Schools of Nursing of the United States and Canada. Annual
Also available are other publications concerning hospital administration, professional education, particularly nursing education, social welfare legislation and planning, public relations, spiritual care of patients, etc.

II. NATIONAL MEDICAL ASSOCIATIONS

Advisory Board of Medical Specialties (1933)
102-110 Second Avenue, S.W., Rochester, Minnesota
B. R. Kirklin, M.D., *Secretary-Treasurer*

CONSTITUENT BOARDS[2]

American Board of Pediatrics
American Board of Psychiatry and Neurology
American Board of Orthopedics and Surgery
American Board of Dermatology and Syphilology
American Board of Radiology
American Board of Urology
American Board of Obstetrics and Gynecology
American Board of Internal Medicine
American Board of Pathology
American Board of Opthalmology
American Board of Otolaryngology
American Board of Surgery
American Board of Anethesiology
American Board of Plastic Surgery
American Board of Neurological Surgery

American Medical Association,[3] (1847)
535 North Dearborn Street, Chicago 10, Illinois
George F. Lull, M.D., *Secretary*
Council on Medical Education and Hospitals[4]
Donald G. Anderson M.D.

Publications
THE JOURNAL of the AMERICAN MEDICAL ASSOCIATION (1883), weekly, Annual Fee $8.00
Hospital Service in the United States including the Registry of Hospitals, Annual
Medical Education in the United States and Canada, Annual
Other Journals, Monographs and Special Publications concerning medical practice, medical education, medical economics and related topics are available.

Canadian Medical Association[5] (1867)
135 S. Clair Ave., W., Toronto 5, Ontario
A. D. Kelly, M.D., *Secretary*

Publications
CANADIAN MEDICAL ASSOCIATION JOURNAL, Monthly, Annual Fee $6.00
Other Publications are also available.

National Medical Association (1895)
1108 Church Street, Norfolk, Virginia
John T. Givens, M.D., *Secretary*

Publications
JOURNAL of the NATIONAL MEDICAL ASSOCIATION (1908), Bi-monthly, Annual Fee $3.00

National Research Council (1916)
2101 Constitution Avenue, N.W., Washington 25, D. C.
Division of Medical Sciences

Publications
General and Special Reports are available.

National Research Council of Canada (1916)
Ottawa, Ontario, Canada

Publications
CANADIAN JOURNAL OF RESEARCH (1929), Monthly
Reports and Special Studies are also available.

Southern Medical Association (1906)
1020 Empire Building, Birmingham, Alabama
C. P. Loranz, *Executive Secretary*

Publications
SOUTHERN MEDICAL JOURNAL (1908), Monthly, Annual Fee $4.00
Special Reports are also available.

---

[1]For Organization data, see pages 10, 12, 15.
*Deceased.
[2]See J.A.M.A. 8/17/46, p. 1301.
[3]For full data concerning various organizational units, consult the JOURNAL OF AMERICAN MEDICAL ASSOCIATION.
[4]In addition to the program in Medical Education particularly in that section of it relating to the approval of Hospitals for Internships and Residencies in the Specialties, the Council also evaluates and publishes lists of Approved Schools for X-ray Technicians, Medical Record Librarians, Occupational Therapy Technicians, Physical Therapy Technicians and Clinical Laboratory Technicians.
[5]The Association carries on a program for the Approval of Hospitals for Internships. For other data, see CANADIAN MEDICAL ASSOCIATION JOURNAL.

III. SPECIAL MEDICAL GROUPS

American Academy of General Practice
406 West 34th Street, Kansas City 2, Missouri
Mac F. Cahal, *Executive Secretary*

Publication
GP (1949), Monthly, $10.00 Annual Subscription Fee

American Academy of Pediatrics (1930)
636 Church Street, Evanston, Illinois
C. G. Grulee, M.D., *Secretary*

Publications
JOURNAL of PEDIATRICS (1932), Monthly, Annual fee, $8.50
Other Publications are also available.

American Association of Obstetricians, Gynecologists and Abdominal Surgeons (1888)
418—11th Street, Huntington 1, West Virginia
J. R. Ross, M.D., *Secretary*

Publication
TRANSACTIONS (1888), Annual Fee, $5.00

American Association of Pathologists and Bacteriologists (1900)
2085 Adelbert Road, Cleveland 6, Ohio
T. T. Karsner, M.D., *Secretary*

Publication
AMERICAN JOURNAL of PATHOLOGY (1925), Bi-monthly, Annual Fee, $8.00

American Cancer Society (1913)
47 Beaver St., New York 4, New York
Mefford R. Runyon, *Executive Vice-President*

American College of Physicians (1915)
4200 Pine Street, Philadelphia 4, Pennsylvania
E. R. Loveland, *Executive Secretary*

Publications
ANNUAL of INTERNAL MEDICINE (1927), Monthly, Annual Fee, $7.00
Other Publications are also available.

American College of Surgeons (1913)
40 East Erie Street, Chicago 11, Illinois
Paul R. Hawley, M.D., *Director*
Hospital Standardization Program[6]

Publications
SURGERY, GYNECOLOGY and OBSTETRICS (1905), Monthly, Annual Fee, $12.00
BULLETIN of the AMERICAN COLLEGE of SURGEONS (1918), 5 times yearly
Report of the American College of Surgeons—Approved Lists, Hospitals, Graduate Training in Surgery, Cancer Clinics, Medical Services in Industry, Medical Motion Picture, Annual
Other Bulletins are also available.

American College of Radiology (1924)
20 North Michigan Avenue, Chicago 6, Illinois
Wm. C. Stronach, *Executive Secretary*

Publications
TRANSACTIONS OF ANNUAL MEETING

American Congress on Physical Therapy[7] (1922)
30 North Michigan Avenue, Chicago, Illinois
Marion G. Smith, B.S., *Acting Executive Secretary*

Publication
ARCHIVES OF PHYSICAL MEDICINE, Monthly, $5.00 (Formerly Archives of Physical Therapy)

American Congress of Physical Medicine
2 East 88th Street, New York 28, New York

Officers
Marion G. Smith, B.S., *Executive Secretary*

Publications
ARCHIVES OF PHYSICAL MEDICINE, Monthly, Annual Fee, $5.00 (Formerly Archives of Physical Therapy)

American Heart Association (1922)
1790 Broadway, New York 19, New York
Rome A. Betts, *Executive Director*

Publication
AMERICAN HEART JOURNAL (1925), Monthly, Annual Fee, $10.00

American Orthopaedic Association (1887)
Henry Ford Hospital, Detroit 2, Michigan

Publications
JOURNAL OF BONE AND JOINT SURGERY (1903) Quarterly, Annual Fee, $5.00
Other Publications are also available.

American Ophthalmological Society (1865)
303 Whitney Avenue, New Haven, Connecticut

Publication
TRANSACTIONS, Annual, Annual Fee, $10.00

American Psychiatric Association (1844)
9 Rockefeller Plaza, New York 20, New York
Austin M. Davies, *Executive Assistant*

Publications
AMERICAN JOURNAL OF PSYCHIATRY (1844), Bi-monthly, Annual Fee, $6.00
Special Reports are also available

American Society of Anethesiologists (1905)
188 W. Randolph St., Chicago
John H. Hunt, *Executive Secretary*

Publication
ANESTHESIOLOGY (1940), Bi-monthly, Annual Fee, $6.00

American Society of Clinical Pathologists[8] (1922)
1040 W. Michigan St., Indianapolis 7, Indiana
C. G. Culbertson, M.D., *Secretary*

Publication
AMERICAN JOURNAL OF CLINICAL PATHOLOGY (1930), Monthly, Annual Fee $6.00

American Trudeau Society (1905)
1790 Broadway, New York 19, New York
Medical Section of the National Tuberculosis Association
E. R. Long, M.D., *Executive Secretary*

Publication
AMERICAN REVIEW OF TUBERCULOSIS

American Urological Association
899 Madison Avenue, Memphis 3, Tennessee

Publication
JOURNAL OF UROLOGY (1817), Quarterly

Canadian Association of Pathologists
Herbert Reddy Memorial Hospital, Westmount, Quebec
M. B. MacKenzie, M.D., *Secretary*

Canadian Association of Radiologists
Montreal General Hospital, Montreal, Quebec, Canada
W. L. Ritchie, *Secretary*

Canadian Cancer Society
800 Bay Street, Toronto, Ontario, Canada
O. H. Warwick, M.D., *Executive Director*

Canadian Tuberculosis Association (1900)
304 Plaza Building, Ottawa, Ontario, Canada
G. J. Wherrett, M.D., *Executive Secretary*

Publications
CANADIAN TUBERCULOSIS BULLETIN (1922), Quarterly, Annual Fee, $1.00
Various Reports and Special literature are also available

College of American Pathologists (1946)
203 North Wabash Avenue, Chicago 1, Illinois
M. G. Westmoreland, M.D., *Executive Secretary*

Federation of Catholic Physicians' Guilds
1438 South Grand Blvd., St. Louis 4, Missouri
Msgr. Donald A. McGowan, *Moderator*

Publications
THE LINACRE QUARTERLY (1932), Annual Fee, $2.00

National Tuberculosis Association (1904)
1790 Broadway, New York 19, New York
James E. Perkins, M.D., *Managing Director*

Publications
AMERICAN REVIEW OF TUBERCULOSIS (1917), Twice yearly, Annual Fee, $8.00
Other Publications are available too.

Royal College of Physicians and Surgeons
150 Metcalfe Street, Ottawa, Ontario, Canada
John E. Plunkett, M. D., *Honorary Secretary*

Publication
ANNUAL HAND BOOK
Canada (1929)

---

[6]The Hospital Standardization Program of the American College of Surgeons has been transferred to the newly formed Joint Commission on Accreditation of Hospitals (Section IV of this Appendix). The Commission's program has been broadened to include medical education and medical care to be evaluated by representatives of the medical profession.

[7]A Registry for Physical Therapy Technicians is also maintained.

[8]The Society Conducts a Registry for Laboratory Technicians.

IV. INTERNATIONAL AND NATIONAL NURSES' ASSOCIATIONS

International Council of Nurses
19 Queensgate, London, S.W., 7, England
Daisy C. Bridges, *Executive Secretary*

Publication
THE INTERNATIONAL NURSING BULLETIN, Quarterly, Annual Fee, $1.00

American Association of Industrial Nurses
654 Madison Avenue, New York 21, New York
Mrs. G. L. Dundore, *Executive Secretary*

American Nurses Association[9] (1896)
2 Park Avenue, New York 16, New York
Miss Ella Best, R.N., *Executive Secretary*

Publications
AMERICAN JOURNAL OF NURSING (1900), Monthly, Annual Fee, $3.00
Other Publications are also available.

Canadian Nurses' Association
1411 Crescent Street, Montreal 25, Quebec, Canada
Gertrude M. Hall, R.N., *General Secretary*

Publications
CANADIAN NURSES JOURNAL, (1904), Monthly, Annual Fee, $2.00
Committee Reports are also available

National Council of Catholic Nurses
1312 Mass. Ave., N.W., Washington, D. C.
Anne V. Houck, R.N., *Executive Secretary*

Publication
THE CATHOLIC NURSE MAGAZINE (1943)

V. RELATED PROFESSIONAL SOCIETIES HAVING HOSPITAL INTERESTS

American Association of Medical Record Librarians[10] (1928)
510 N. Dearborn St., Chicago 10, Illinois
Martha M. Bailer, R.R.L., *Executive Secretary*

Publication
JOURNAL OF THE AMERICAN ASSOCIATION OF MEDICAL RECORD LIBRARIANS (1929), Quarterly, Annual Fee, $2.00

American Association of Medical Social Workers (1925)
1834 K St., NW., Washington 6, D. C.
Mary B. Moss, *Executive Secretary*

Publication
BULLETIN (1919), 8 issues per year, Annual Fee, $1.00

American Association of Nurse Anesthetists (1931)
116 So. Michigan Ave, Chicago 3, Illinois
Miss Florence A. McQuillen, *Executive Secretary*

Publication
JOURNAL OF THE AMERICAN ASSOCIATION OF NURSE ANESTHETISTS (1942), Quarterly, Formerly Quarterly Bulletin (1933)

American Association of Psychiatric Social Workers (1926)
1860 Broadway, New York 23, New York
Mrs. Anne W. Aldridge, *President*

Publication
NEWS LETTER (1932), Quarterly, Annual Fee, $1.00

American Association of Social Workers (1921)
One Park Ave., New York 16, New York
Joseph P. Anderson, *Executive Secretary*

Publication
THE COMPASS, Bi-monthly, Annual Fee, $1.00

American Society of Medical Technologists
4931 N.W. Glisan, Portland, Oregon
Mary Nix, *President*

Publication
THE AMERICAN JOURNAL OF MEDICAL TECHNOLOGY, Bi-monthly, Annual Fees, $4.00

American Dietetic Association[11] (1917)
620 North Michigan Avenue, Chicago 11, Illinois
Ruth E. Yakel, *Executive Secretary*

Publications
THE JOURNAL (1925), Monthly, Annual Fee, $3.00
Special Bulletins are also available

American Foundation for the Blind
15 W. 16th Street, New York 11, New York
M. Robert Barnett, *Executive Director*

American Occupational Therapy Association[12] (1917)
33 West 42nd Street, New York 18, New York
Wilma L. West, *Executive Director*

Publications
OCCUPATIONAL THERAPY AND REHABILITATION (1922) Bi-monthly, Annual Fee, $5.00
THE OCCUPATIONAL THERAPY YEARBOOK, Annual

American Pharmaceutical Association[13] (1852)
2215 Constitution Avenue, N.W., Washington 7, D. C.
Robert P. Fischelis, *Secretary.*

Publications
JOURNAL (1912) Monthly, Annual Fee, $2.00
Other Publications are aso availalble.

American Physio Therapy Association (1921)
1790 Broadway, New York, New York
Mildred Elson, *Executive Secretary*

Publication
THE PHYSIO THERAPY REVIEW (1920), Bi-monthly, Annual Fee, $2.50

American Registry of Physical Therapy Technicians[15]
30 North Michigan Avenue, Chicago 2, Illinois
Marion G. Smith, *Registrar*

American Registry of X-ray Technicians[14]
2900 East Minnehaha Parkway, Minneapolis 6, Minnesota
Alfred B. Green, *Executive Secretary*

Publication
THE X-RAY TECHNICIAN serves as the official organ.

American Society of X-ray Technicians (1921)
16 Fourteenth Street, Fond du Lac, Wisconsin
Genevieve J. Eilert, *Executive Secretary*

Publication
THE X-RAY TECHNICIAN (1929), Bi-monthly, Annual Fee, $1.50

American Society of Hospital Pharmacists[16] (1942)
2215 Constitution Avenue, N.W., Washington, D. C.
Gloria F. Niemeyer, *Executive Secretary*

Publication
THE BULLETIN, Bi-monthly, $3.00

Canadian Association of Medical Record Librarians
Hamilton General Hospital, Hamilton, Ont.
Amy Burgess, *Secretary*

Canadian Association of Social Workers (1928)
18 Rideau Street, Ottawa, Ontario, Canada
Joy A. Maines, *Executive Secretary*

Publication
THE SOCIAL WORKER, 5 issues yearly, Annual Fee, $1.50

Canadian Association of Occupational Therapy (1926)
331 Bloor Street West, Toronto, Ontario
Miss Helen Levesconte, *Secretary*

Publications
CANADIAN JOURNAL OF OCCUPATIONAL THERAPY (1933), Annual Fee, $1.00

Canadian Conference of Social Work (1928)
245 Cooper Street, Ottawa, Ontario, Canada
G. S. Chandler, *Secretary*

---

[9]Nursing Education activities are carried on by the National League for Nursing.

[10]A Registry for Medical Record Librarians is maintained by this Association.

[11]An Educational program including the Approval of Hospitals for Dietetic Internships and further supervised training is also carried on.

[12]This Association Maintains a Registry for Occupational Therapy Technicians.

[13]Please refer to *American Society of Hospital Pharmacists.*

[14]This is an activity of the American Society of X-Ray Technicians.

Available from the American Hospital Association, 18 East Division Street, Chicago 10, Ill., or the Catholic Hospital Association, 1438 South Grand Blvd., St. Louis 4, Mo.

Protect your Linens from Loss
Aid Your Sorting and Discard System

APPLEGATE'S INKS AND MARKERS

For over 56 years Applegate has stood for Indelible Inks that are indelible and Hospital Marking systems. Give our indelible inks a trial and let them prove their superiority over all others.
Write for free booklet "The Applegate System."

APPLEGATE'S INDELIBLE INK

(Silver Base—Requiring heat to set) This Silver Base Ink Lasts Full Life of Goods. Will never fail when directions for its use are carefully followed. The action of heat on the silver in the mark causes a chemical change right in the fiber, photographing the mark into the goods so it cannot be removed.

An absolutely INDELIBLE mark can only be obtained by using APPLEGATE'S (silver) Indelible Ink. Sold in ¼-lb.; ½-lb. and 1-lb. cans. Any quantity of ink shipped same day order is received.

XANNO (Zanno) INDELIBLE INK

(No heat required to set) Lasts many washes longer than other no-heat inks, no thickening and no sediment in can hence no waste. Sold in pint, quart, gallon and 5-gallon containers. Any quantity of ink shipped same day order is received.

Xanno type Cleanser
Pint, Quart or Gallon

Xanno Indelible Ink *REMOVER*
½ Pint

Both of these inks can be used with PEN or LINEN MARKERS. They contain no acid or other substances that will injure metal, rubber or any cloth.

METAL MARKING DIES

Made in any size or style letter that will fit the large marking space, 2½" x 6½". Will mark both coarse and fine linens. Write for prices and full description.

APPLEGATE'S MARKERS

The only inexpensive marker that permits the operator to use both hands to hold the goods and mark them any place desired. Available in foot or hand power. Cost of dies extra. Send us your name and list of departments and let us send you a Sample Impression Slip showing size and style of letters and quote you without obligation on your part.

Automatic Hand Stamper

Ideal for the smaller hospital. Sturdily constructed of chrome metal. Write for information.

APPLEGATE CHEMICAL CO. **5630 HARPER AVE. CHICAGO 37, ILL.**

HEALTH CARE FACTS AND FIGURES

Introduction

WHEN this section was first presented in the 1949 Directory, the Editors endeavored to assemble from various sources data significant to the hospital administrator relating to hospital services, the physician, the nurse and professional education in these areas, all of which is of significance to the hospital administrator. Current information as well as data of previous years has been included in the Tables in Appendix B.

The material is classified as follows:

Concerning Hospitals;

Concerning Medical Education and Physicians; and

Concerning Nursing Education and Nurses.

Some of the facts are statistical, others informational: some relate to the availability of staff members, physical facilities. some financial and operating hospital data, educational facilities and enrollment figures, and other material, all having a bearing directly or indirectly in the administration of hospital services.

That the changes in hospital administration during the past ten years have been revolutionary, no one will deny. It is for this reason primarily that the Editors present these data in convenient form to enable the readers of HOSPITAL PROGRESS to study the trends in hospital utilization, in hospital facilities, in prepayment coverage, in student enrollment, etc. Presented, too, are some facts concerning the availability of professional staff members and certain nonprofessional workers—which may explain some of the personnel shortage problems.

Particularly significant are the statistics concerning inpatients: admission per thousand population; patient days of service also based on a per thousand population unit; average length of stay per patient; the increasing number of persons in the general population receiving care in general hospitals; and other related facts. With this material, administrators can measure the performance of their own hospitals in relation to other similar institutions and evaluate their efficiency.

Trends in hospital development both as to facilities and operations are clearly discernible. This is true, too, in the area of medical education in which is recorded the number of graduates in medicine. While the variation in graduates from year to year exceeds only three or four hundred, the

Appendix B

number of hospital patients has increased enormously on a comparative study.

The trend in nursing education, particularly as to graduates, affords ample evidence to explain the shortage of graduate nurses. Here again, the study of this factor in relation to increased number of in-patients makes crystal clear the need for study of plans for the preparation of auxiliary nursing service workers—more particularly, practical nurses.

Extraneous conditions affect our hospital staffs—the Korean War requires physicians and nurses; there are now more opportunities in industry and public health agencies for nurses than heretofore. Obtaining and retaining a minimum staff of registered nurses is oftentimes very difficult.

From time to time the Editors expect to add other material of significance in hospital management. For the present, it is hoped that this presentation may serve a useful purpose for the readers of HOSPITAL PROGRESS.

Specialized Services in HOSPITAL CONSTRUCTION EQUIPMENT OPERATION and MAINTENANCE NEEDS

HOSPITAL care is a highly specialized service. Nowhere is the demand for such a high degree of specialized training more evident than in the hospital, where every action is directed toward safeguarding the life of the patient.

The communities of Sisters and Brothers devoting their lives to the administration and technical phases of hospitals, the doctors applying their professional skill in these institutions, the nurses in the direct care of the sick, are typical examples of the specialized staff members required in the hospital care of the sick.

But the professional services of this staff would be wholly ineffective, or only partially so, without the physical means of carrying on their professional service. Here, in providing the necessary physical means, a high degree of specialization is also essential, involving as it does the designing of buildings, the proper equipping of these institutions, the production, and use of medical and surgical apparatus, as well as the equipment and materials necessary for operation and maintenance.

Not only is the hospital care of the sick a very highly specialized professional work, but this service must also be provided on a continuous basis, and frequently in the form of emergency service. Specialized service with continuity of supply, and their coordination in terms of medical and hospital personnel, equipment, and materials constitute the keynote of efficient hospitalization.

By dealing with and through responsible firms recognized as definite divisions of the hospital trade, the equipping of hospitals in the original installations and their annual operation and maintenance can obviously best be accomplished. These agencies, too, are specialized and be-

The Purchasing Guide

(Continued from page 307)

cause their interests are centered in serving the hospital field, fully understand the needs and requirements in every department of hospital activity; and on this basis, they are in a sound position to offer the technical service inherent in supplying hospital requirements.

Research and progress in medical science result in improved techniques, in the development of new products and more efficient processes, resulting in more effective methods in the care of the sick and the administration of the hospital. Manufacturers, through their own research departments, are continually studying and investigating the feasibility of new products while striving to improve current equipment always to meet the changing hospital needs and the increasing demands for service. Close contact with the hospital field and constant cooperation with hospital administrators, on the part of these agencies devoted to the hospital, are most essential if hospital services are to advance.

Supplying the physical requirements of the hospital, like providing hospital care of the sick, is a highly technical undertaking very vitally affecting the efficiency of hospital service. Continuity of service in securing equipment and supplies is also an essential feature. Marginal or submarginal distributors usually selling on a price basis and making little or no contribution to the general progress of hospitalization, are ordinarily not in a position to render in the same degree that measure of service oftentimes so urgently needed in the daily operation of the hospital.

Procurement officers of our hospitals are conscious of the importance of the supplier. The coordinated purchasing department in the individual hospital catalogs all sources of supply, conditions of delivery, quality and other terms. Awareness of service programs of manufacturers and suppliers for emergency repair and maintenance of the hospital's equipment is a paramount consideration to every purchasing agent. Price is certainly not the one criterion motivating the procurement officer in his program of supplying the hospital's needs. Continuity of supply, availability of reliable service for technical equipment, the supplier's record of performance to the hospital and the hospital field—these and other factors are the dominant considerations in the relations of the purchasing agent and the hospital supplier.

Those who make the purchases of supplies and equipment for public and private institutions have an important function to perform. Their first duty is to serve the institution that employs them and to exercise discrimination and care in the choice of the things they buy. These must be highly utili-

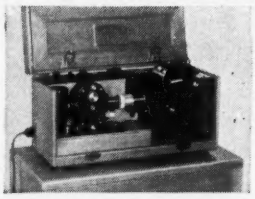
CAMBRIDGE

CARDIAC DIAGNOSTIC INSTRUMENTS

Cambridge Standard String Galvanometer Electrocardiographs are available in the SIMPLI-TROL Portable Model, the Mobile Model, and the Research Model, all of which may be arranged for heart sound and pulse recording.



"SIMPI-TROL" PORTABLE

Light in weight and simple to operate, without sacrifice of fundamental accuracy or completeness of function.

"SIMPLI-SCRIBE" DIRECT WRITER

A convenient supplementary electrocardiograph for screening, gross pathology, etc., for the Doctor or Hospital having a String Galvanometer Electrocardiograph available for checking purposes.

EDUCATIONAL CARDIOSCOPE

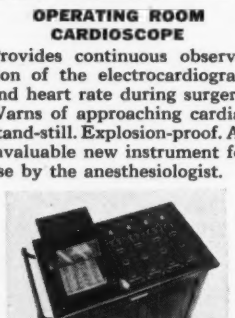
This instrument is used in a majority of the leading medical schools for teaching electrocardiography and ausculation by audio-visual demonstration. The electrocardiogram and other physiological phenomena—vectorcardiogram, EKY, BCG, intra-cardiac blood pressure—may be shown continuously on the large picture tube. Simultaneously the related heart sounds of the patient may be heard, through individual stethophones. A built-in tape recorder facilitates collection of a tape library of pathological heart sounds. These may be played back at any time for visual and audio demonstration in lieu of patients. Instructors and students alike declare that the Cambridge Educational Cardioscope has brought about a new era in the teaching of Cardiology.

OPERATING ROOM CARDIOSCOPE

Provides continuous observation of the electrocardiogram and heart rate during surgery. Warns of approaching cardiac stand-still. Explosion-proof. An invaluable new instrument for use by the anesthesiologist.

CAMBRIDGE MULTI-CHANNEL DIRECT WRITING RECORDER

(at left) The new Cambridge Multi-Channel Recorder consists of two, three or four direct-writing galvanometers together with appropriate amplifiers, power supply and control panels, mounted on a single mobile cabinet. Multi-Channel String Galvanometer Instruments also available.



PLETHYSMOGRAPH—Records variations in volume of extremities as determined by the state of fullness of the blood vessels.

ELECTROKYMOGRAPH—Produces a continuous record of heart border motion at chosen points along the cardiac silhouette.

BLOOD PRESSURE RECORDER—A portable instrument which continuously indicates and records blood pressure.

AMPLIFYING STETHOSCOPE—A pocket-size, light-weight instrument for auscultation of amplified heart sounds and murmers for normal and hard-of-hearing physicians.

RESEARCH pH METER—For biological and research work. Sensitive to .005 pH, readings reproducible to .01 pH.

The Purchasing Guide

(Concluded from page 309)

tarian—in brief, serve the purpose for which they are designed.

Quality and price usually tip the scales of a bargain. Sometimes individual preference and personal friendship become contributing factors. The further fact that the seller has been reliable, prompt and fair in his dealings may give him an inside lead on orders. But, after all, quality and price control.

Just now, competition is keener than ever. Here and there it degenerates into business rivalry. The local merchant demands a preference. Reasons for preferential treatment are eloquently set forth.

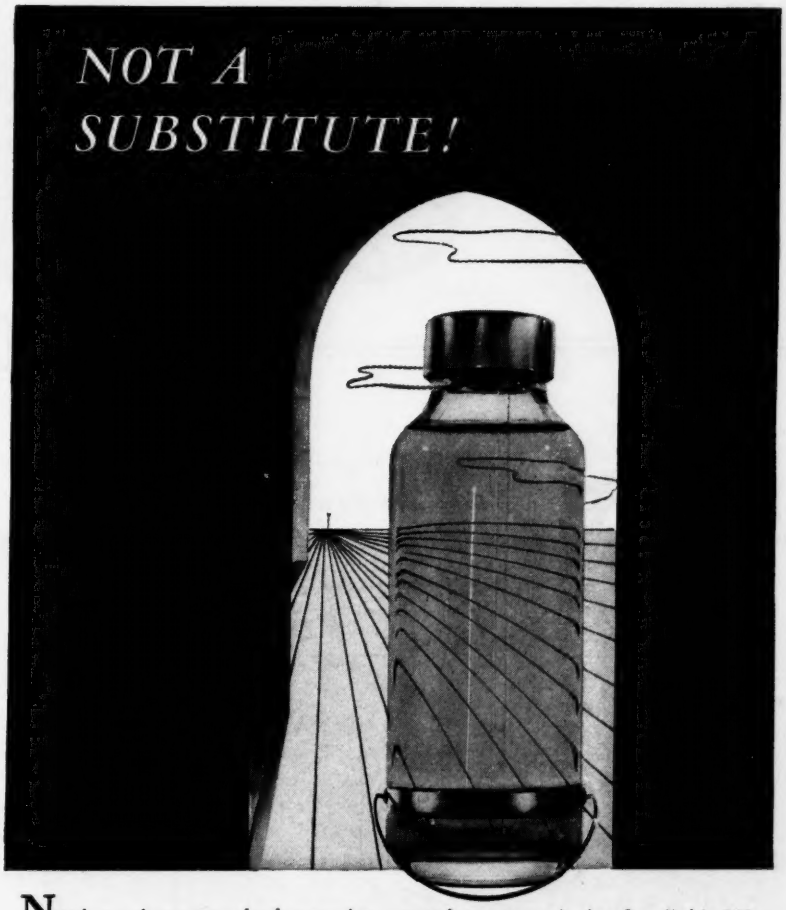
The facts are that where all other things are equal, preference may be given to the local merchant because he is the local merchant, to a friend because he is a friend, to a reputable house because it is a reputable house. But wherever there is competitive buying—and that applies to all public institutions—the quality and price factors must control.

Quality and price determine sales.

HOSPITAL PROGRESS, the Official Journal of The Catholic Hospital Association, through the advertising pages of the Directory of Catholic Hospitals, of the regular monthly issues, and through the annual convention exhibits, endeavors to promote the highest type of equipment and supply service to meet the requirements of Catholic hospitals. We, therefore, direct the attention of the Catholic hospital administrators to the established hospital trade as represented in the pages of the Buying Directory and Guide of this Directory issue, and of the regular issues of HOSPITAL PROGRESS. These firms, through their advertising in HOSPITAL PROGRESS, have expressed their interest in serving the Catholic hospital, and as a result merit your favorable consideration when considering the purchase of equipment and supplies.

In addition, the advertising of manufacturers and dealers on the following pages of this Directory, and in the monthly issues of HOSPITAL PROGRESS, will serve as a convenient source of information concerning equipment, supplies and special services covering your hospital requirements. Your request to these companies will bring immediate response; these firms are especially recommended for your favorable consideration in this important area of hospital administration.

The Index of Advertisers, which will be found on page 357 of this issue, lists all advertisers alphabetically including in each instance the home office address. These firms, through their advertising in HOSPITAL PROGRESS and their years of service in and to the hospital field have proved their right to your patronage when purchasing hospital equipment and supplies.



NOT just a plasma expander, but genuine blood plasma itself . . . offering not only speedy, natural blood volume expansion, but the plus value of its recovery-speeding homologous proteins and natural nutrients.

Not just an experimental liquid, but the time-proved product of human blood that restores and maintains osmotic pressure, replaces lost protein, and has saved thousands of lives every year for many years.

Hyland Liquid Plasma is ready to use without blood grouping, typing or crossmatching. Requires no refrigeration, preliminary warming or reconstitution. Supplied in 300 cc. liquid units . . . clear, citrated normal human plasma, *ready for immediate infusion.*

C.H.A. PROJECT

Office addition is dedicated

ON January 18, 1954, the formal dedication took place of the new addition to the Central Office of the Catholic Hospital Association. The "T"-shaped wing added 21 new offices to the Association's headquarters, nearly doubling the amount of available floor space. With the new addition, the Catholic Hospital Association enters upon a new era of expanded service to its member institutions—and service has always been the sole reason for the existence of the Association.

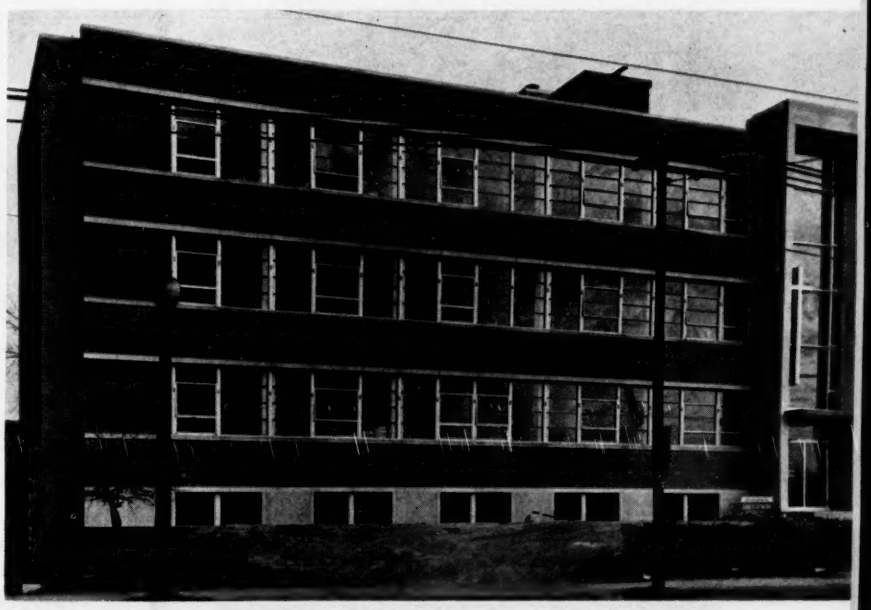
It all began one summer day in 1914. Father Moulinier of Marquette University in Milwaukee had concluded a retreat for the Sisters of St. Joseph when some of the Sisters approached him with a problem, one that has a familiar ring today: how to get interns for one of the hospitals conducted by the Sisters. The problem was a difficult one, then as now gradually the conversation drifted to a more general topic—where could the Sisters go for guidance in questions such as this? Father Moulinier came up with an answer to that one: Catholic hospitals should get together, he said. This meeting took place on the porch of a cottage on the hospital grounds, and in a real sense, that is where the Catholic Hospital Association was born.

A few months after, in April, 1915, a preliminary Catholic hospital meeting took place in Milwaukee, and in June came the first convention, during which the Association was formally organized, under the leadership of Father Moulinier. It was a difficult period for the entire health field—a time of impending change. The medical profession, under the leadership of the American College of Surgeons, was attempting to elevate standards of medical practice as well as medical education; the standardization program, which was part of this process, was to be launched shortly. On the other hand, hospitals were entering a new period of scientific care: X-ray and laboratory departments were just coming into their own. In a way, it was a transition period from the old to the new—from custodial care to the highly scientific and specialized hospital care as we know it today.

The hospital atmosphere, then, was somewhat confused, and the young Association found itself confronted with a task that would have daunted a much larger and older organization. But Father Moulinier was no ordinary man. To him, more than anyone else, belongs the credit for the truly remarkable strides made by Catholic hospitals in the years 1915-1928.

The story of those early years is an ever-inspiring one. Even a simple chronology is impressive. After the 1915 meeting, conventions were annual affairs—but they were only a small part of the activities of the small group that guided the work of the Association. Father Moulinier was one of the earliest champions of the hospital standardization program, and in that cause he wrote endless letters, gave speeches, traveled thousands of miles. The result of those efforts can be seen even today—the percentage of Catholic hospitals with A.C.S. approval is decidedly above that of hospitals as a whole.

In 1920 came another new venture: the foundation of HOSPITAL PROGRESS. Here was another undertaking begun largely on boundless faith and very little experience. To Father Moulinier, the new journal provided an ideal forum to drive home the lessons he considered so important—bet-



Front view of the Central Office of the Catholic Hospital Association, 1438 South Grand Blvd., St. Louis, Mo.

ter and more diagnostic facilities, more medical record libraries, better trained Sisters. These themes were to recur constantly in the early years of the journal.

Father Moulinier retired in 1928. His successor, of course, was Father Schwitalla — a choice in which the hand of Providence must have played a large part. Few men could have brought more outstanding gifts to the work of the ever-growing Association, and few could have mustered the enormous energy which he expended in furthering the work of the Catholic hospitals. This was another time of change and growth, in many directions. The Association's headquarters were moved to St. Louis in 1929, and in the years that followed numerous educational activities of the Association which continue to this day were originated. Just to mention a few events: in 1933 the first general institute in nursing education took place; in 1935 came the first general institute on hospital administration in Omaha; in 1937 the undergraduate curriculum in hospital administration got underway at St. Louis University. And much of this happened during a period when the nation's hospitals were suffering the effects of the worst depression the country had ever known!

Towards the end of the 30's came a development which was to result in the present over-all organization of the Catholic Hospital Association—the foundation of the Conference of Bishops' Representatives by Cardinal Stritch in 1939. The close ties between this Conference and our Association resulted in the development, in 1942, of the Administrative Board, with Bishop Karl J. Alter as Episcopal Chairman of the Board. The Association had always been guided in all its activities by the hierarchy; now this guidance was formalized, and the areas of activity spelled out. Soon a similar organization scheme was adopted in Canada, with the establishment of the Catholic Hospital Council of Canada in 1945.

After nearly 20 years of tireless activity, Father Schwitalla was forced to retire in 1947 due to ill health. The Association's work had assumed such proportions by this time that expansion and re-organization was imperative, and this took place in that same year. Father Flanagan became the first incumbent of a newly created position, that of Executive Director. Mr. H. R. Kneifl continued as Executive Secretary, a position he had held for many years, and the headquarters were moved from a few offices in the St. Louis University School of Medicine to a large, remodeled home on adjoining property. Today, the Catholic Hospital Association is the largest organization of its kind in the world.

Central Office Services

The new wing provides not only ample facilities for the present staff of 34, but makes possible enlargement in the scope of activities in coming years. Some of these new activities are already in the blueprint stage.

The following is a brief outline of present services. However, there are a number of activities which cannot be pinned down under concrete headings. For example, the Central Office re-

ceives frequent requests for consultation by letter, by wire, or by long distance telephone. These requests are acted upon as soon as possible, and they frequently may pertain to several of the regular areas of activities, or even to a number of them.

Professional Services

1. *Nursing Service.* This department was established in the past year to foster improvement in the organization and administration of this important service. Administrative policies and procedures, better organization, better professional care, all are within the province of this department. There is also a nursing service department page in HOSPITAL PROGRESS.

2. *Hospital Administration* aims to help member hospitals with professional and administrative problems. Sound policies, practical and down-to-earth directives are developed for various aspects of hospital administration. This department has the Administrative Forum column in HOSPITAL PROGRESS.

3. *Financial Management.* This service, assists members to achieve efficiency in the conduct of the hospital's business (accounting, credits and collections, purchasing, etc.). This department, established in 1953, has already conducted several meetings and institutes.

4. *Guilds and Auxiliaries.* This office now functions as information bureau in connection with organization and development, by-laws, publicity, and meetings for these special groups. Bi-monthly bulletin service and HOSPITAL PROGRESS department are media to share ideas.

5. *Public Relations.* Main purpose —to help hospitals develop better public relations in every way. Bulletins, meetings, consultation, HOSPITAL PROGRESS articles fall within province of activity.

6. *Nursing Education.* Rendered through the office of the secretary of the Conference of Catholic Schools of Nursing. Workshops, consultation, surveys, HOSPITAL PROGRESS department, statistical studies, are part of the activities.

Special Services

1. *Medical Ethics.* One of the most important services rendered by the Association; code of ethics, medico moral problems—in pamphlet form and in HOSPITAL PROGRESS department. Consultation whenever necessary, in person and by telephone. Service extends to discussion in meetings, institutes, etc.

2. *Legislation.* Executive Board, through Administrative Board, keeps members informed of legislative proposals. Periodic bulletins amplify this service.

3. *Education.* This area includes many fields, and many departments participate in this service.

A. Nursing Education has already been mentioned.

B. Hospital Administration—graduate study in this field has been provided by St. Louis University in cooperation with Central Office since 1948. Summer school programs are also offered every year by the university, and in close cooperation with the Association.

(Concluded from page 322)

C. *Specialized Professional Education.* The Association is actively encouraging higher standards and more uniformity in education for pharmacists, medical technologists, X-ray technicians and other special fields.

Meetings

1. *Annual Convention.* The Association's major annual affair and one of the most important events in the national hospital field. Convention expounds Association's policies, acts as a major forum for pronouncements, and is an important educational activity.

2. *Workshops and Institutes.* In the past five years, some 3400 religious and lay members of Catholic hospitals have been reached in 31 of these regional meetings in the fields of hospital administration, nursing education and nursing service, and hospital finance. They took place in all parts of the country.

3. *Special Sisterhood Meetings.* In many such meetings, the Central Office has furnished guidance, and major addresses have been made by the Association's officers.

Production Services

The Association's Central Office annually compiles, edits, and produces a large number of publications, both printed and mimeographed.

1. HOSPITAL PROGRESS, the official journal of the Association, now has an editorial staff of four, an advertising staff of four, all located in the Central Office.

2. *Linacre Quarterly.* The editorial offices of this publication, the circulation of which has jumped in recent years, are located at the Association's headquarters.

3. *Special Publications.* The 600 page administrative manual of St. Mary's Hospital in Rochester, N.Y., is one example of this type of publication. Numerous bulletins, brochures on medical ethics, nursing education, and hospital adminstration are published annually.

4. *Production, Circulation, Promotion.* This department is in charge of all such activities, plus the mimeographing and mailing room. The department was inaugurated January 1, 1953.

Central Office Library

An ever-increasing volume of reference materials and a large number of specialized publications are now housed in cramped quarters; the staff is inadequate. More service to the field is being blueprinted, partly along the lines of the annotated bibliographies which have been published for some years in the field of medical records.

Council and Committee Activities

Closely intertwined with various departments at the Central Office is the work of the Association's Councils and Committees, which have the general function of working out in detail the program laid down by the Executive Board. There are Councils on hospital administration, public relations, nursing service, financial administration, and guilds and auxiliaries. There are committees on hospital pharmacy practice, medical technology, X-ray technology, and medical record library practice. ☆

When you think of Sutures, think of –

DEKNATEL

Deknatel now makes a complete line of quality sutures for the surgical profession. Here's your check list:

☑ Deknatel Surgical Gut (Non-boilable) U.S.P. in plain, medium chromic and extra chromic.

☑ Deknatel Needled sutures (Non-traumatic) with Surgical Gut, Silk, Cotton, Nylon.

☑ Deknatel Sterile Readi-Cut Silk with COL-R-TIPS — "the color of the tip identifies the size." The tips keep the strands in perfect alignment.

☑ Deknatel Non-Absorbable Sutures (not sterilized) in Black and White Braided Silk, Black and White Twisted Cotton, Black Braided Nylon, all treated to be moisture and serum resistant.

☑ Deknatel Readi-Cut (not sterilized) in Black Braided Silk and White Twisted Cotton.

☑ Deknatel Readi-Wound Ligature Reels of Black Braided Silk and White Twisted Cotton.

For more detailed information write to J. A. Deknatel & Son Inc. — manufacturers of surgical sutures and operating room specialties — 96-20 222nd St., Queens Village 29, (L. I.) N. Y.

Flint, Mich., architects' reception room is brightly lighted yet free from glare.

Good lighting is vital to hospital efficiency, comfort, safety

Facts on Lighting

By CHARLES CHAMPLIN, II
Illumination Engineer
The Edwin F. Guth Company
St. Louis, Missouri

ILLUMINATION strongly influences efficiency, comfort, safety and aesthetics, and it deserves careful study by those who are primarily concerned with the technical work of the hospital. This article is written to assist in determining the proper lighting intensities and quality for the many hospital rooms, and to make specific recommendations of luminaire types in order that "good seeing" with utmost comfort be provided.

The eyes are supersensitive and directly or indirectly control a large percentage of our actions. The pupils of the eyes automatically react to all lightness and darkness. Under 1000, 1500 or 2500 foot candles of lighting intensity (as in the beam of the surgical lighting fixture) the pupils contract to a fraction of their normal size. As the eyes move away from the beam, the lighting intensity in other portions of the room being less bright, cause the pupils to expand to normal or even larger size, depending upon the surrounding brightness. The adjustment period of the pupils is unnerving to one's system and tends to reduce one's efficiency. When designing the lighting system, whether it be in the surgical room, the examination room or even in the private rooms and wards, effort should be made to reduce all brightness contrasts.

Private rooms and wards: More and more, individual wall brackets directly over each bed are being used for better lighting in wards and rooms. These individual brackets have two components of illumination, one switch turning on the downlight, which directs the light down upon the patient's bed. Good illumination for reading of magazines and newspapers from 25 to 30 foot candles is provided. Also, another switch turns on the upward component which may be used without the downlight component. This is nice, soft general illumination, highly recommended for the patient not able to read and sit up.

A variation of the wall bracket may include the so-called "bed and examination" lights which can be disconnected from the wall and held by a nurse while the doctor examines the

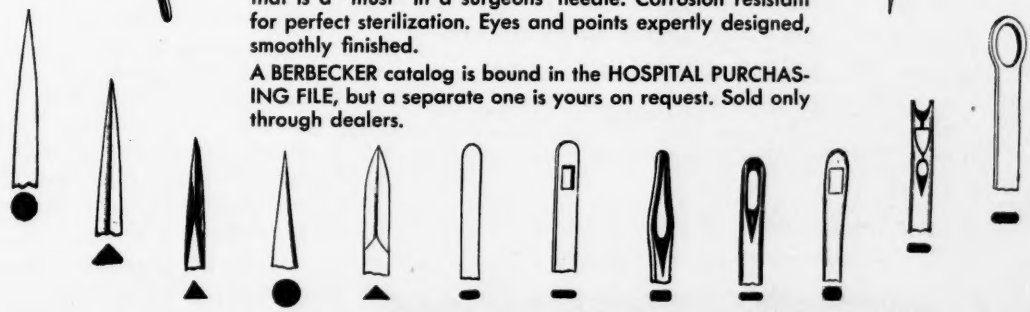
BERBECKER SURGEONS' NEEDLES

Made in England for the Surgeons and Hospitals of America

TYPES & SIZES FOR ALL SUTURING NEEDS

BERBECKER SURGEONS' NEEDLES are of the highest quality — uniform throughout the line, uniform throughout the years! This accounts for their long-time, national acceptance. Made of fine carbon steel, they have the lasting resiliency that is a "must" in a surgeons' needle. Corrosion resistant for perfect sterilization. Eyes and points expertly designed, smoothly finished.

A BERBECKER catalog is bound in the HOSPITAL PURCHASING FILE, but a separate one is yours on request. Sold only through dealers.



JULIUS BERBECKER & SONS, INC., 15 E. 26th ST., NEW YORK 10, N. Y.

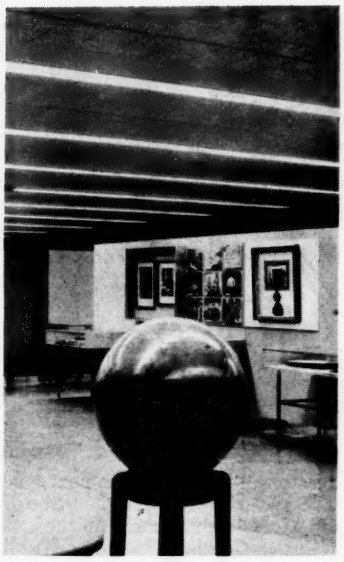
Lighting

(Continued from page 328)

patient. Also, the individual brackets may have receptacles in them for electrical devices such as bed-lamps, etc., and finally, a night-light is highly practical in some cases.

A properly designed wall bracket in the ward and room will usually provide all the light that is necessary. In cases of large wards where additional illumination is desired in the center of the room, totally indirect lighting luminaires are highly desirable. Usually incandescent lighting of low intensities will do this job adequately well for "no seeing" illumination.

Night-lights for wards and rooms: While the wall bracket or the overhead indirect luminaire serves for all seeing purposes, a night-light in the wall, about 18" above the floor, is a very practical tool for use in the rooms, and of course, along the corridors.



General Eisenhower Museum, Abilene, Kansas: high intensity lighting with excellent diffusion.

Lighting for the sunroom: The cheerful, sunny porch gives new hope to the convalescent, and comfort to the visiting relatives. For the darker days and for evening visiting hours, soft, restful lighting is important in the sun-room and the solarium. The lighting must be restful, serene and of quiet beauty. The design of the luminaire too, is a factor to gain this atmosphere. Indirect lighting is available in very beautiful designs to effect its purposes.

Corridor lighting: The corridor is an oft-forgotten area insofar as lighting is concerned. There should be sufficient illumination for intermittent reading of charts, etc., by the staff, and also enough illumination for general safety and convenience. Overhead outlets should be spaced to avoid light entering transoms and doors. Where large glass partitions separate corridors from wards, avoid direct type of illumination.

Provide five to eight foot candles of general illumination, and luminaires that have low-brightnesses and low contrast. They should be of the economical type of operation, as they burn nearly 24 hours a day. Night-lighting can be built right into the corridor luminaire.

Germicidal lamp units: Many hospitals over the past decade have installed the so-called germicidal lamp which emits the shorter, ultra-violet

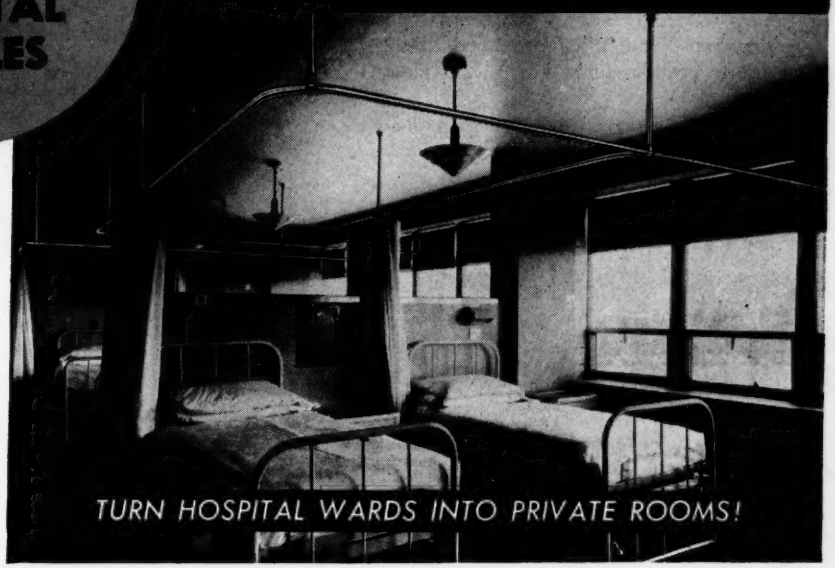
AMERICA'S GREATEST NAME IN HOSPITAL CUBICLES

CAPITAL CUBICLES



OUTSTANDING ADVANTAGES!

COMPLETE PRIVACY:
Installed in wards, semi-private, first aid, examination rooms; and in x-ray, hydrotherapy, dental, basal metabolism and other departments. Capital Cubicles provide maximum light and air, and enable nurses to render quicker medication and attention to the patient.

SMOOTH, EFFICIENT OPERATION:
Patented features of Capital Cubicles prevent hooks from catching or jamming, and assure quick, quiet, dependable operation.

EASY INSTALLATION:
Delivered complete with each cubicle and curtain numbered. Quickly installed with conventional carpenter's tools or, if desired we will install at nominal cost.

LOW COST:
The initial cost of Capital Cubicles are the lowest on the market. *There are no maintenance costs to consider!*

AVAILABLE IN:
BRASS • STAINLESS STEEL
LUSTROUS FINISH ALUMINUM

MODERN DESIGN:
Capital Cubicles are the last word in functional, streamlined beauty!

CURTAINS:
Capital Cubicle curtains are made of special closely-woven jean cloth, non-transparent and sanforized shrunk. In white and restful fast colors. Substantial rust-proof eyelets will not pull out or stain the cloth.

Lighting

(Continued from page 332)

wave lengths that kill air-carried bacteria. Most effective in the operating room, the nursery, and general waiting rooms.

Lighting in psychiatric wards and rooms: Here, safety in design is the number one consideration for lighting equipment. Wherever possible, units should be recessed into the ceiling, which is the most inaccesible place to reach. Also, recessed units have little or no projecting parts on which a patient can harm himself. All units should be provided with special keyhead screws so that they can be opened only with a special key.

Lighting for the entrance and office area: The modern hospital can be made more inviting and more pleasant by having modern, high intensity luminaires in the entrance hall and adjoining admittance rooms and administration offices. Good fluorescent luminaires, well shielded but designed to provide high intensities with comfort, are definitely recommended. A visitor to the hospital steps from the 10,000 foot candle intensity out-of-doors into the much dimmer entrance hall. Hence, the artificial illumination in the lobby should be of sufficient foot candles to help compensate for pupil adjustment during this procedure. Illuminate this area the same as fine stores are illuminated today. It is your show place, your show window, and visitors and patients alike readily sense the hospital's graciousness by cheerful, bright, comfortable illumination.

Proper illumination for the hospital is not unlike that applying to any other type building. Certain fundamental lighting concepts are the basis of the "science of seeing", and these concepts are universally accepted to assure top efficiency and comfort in all seeing-tasks.

Lighting for surgery: This specialized field of illumination has been most carefully studied by the surgeons themselves. Different types of surgical light provide for deep incisions, or simply surface illumination of high intensity, depending on the type of work in question. For instance, the grafting of skin would take a wide beam, and only 500 or maybe 1000 foot candles would be needed over a 16″ diameter beam. On the other hand, higher intensities of 2500 to 5000 foot candles are desired to distinguish objects in deep surgery.

For the general lighting in an operating room, relatively high foot candles should be effected. If we recall how the surgeon's eye reacts, moving from the intense surgical light beam to the general illumination in the room, it becomes evident that from 100 foot candles up to 200 foot candles is highly desirable for the general illumination in the operating room.

For minor surgery: Here less intense beam is required, and also less general over-all illumination than in the case of the major surgical room. Of course, the light should be glare-free and comfortable, yet should be of good over-all intensities for general examination as well as minor surgery.

General illumination for operating rooms: Either in the major surgical room or the minor surgical room, the

RUBBER FLOORING

Here are the pros of this type of flooring as presented by

By C. P. McFADDEN
Chairman, Rubber Flooring Division
The Rubber Manufacturers Association, Inc.

Light-colored sheet rubber flooring gives look of neat elegance to a waiting room in Primary Hospital, Salt Lake City.

HOSPITAL flooring, if it is to serve properly, must meet even more rigid specifications than flooring in many other types of buildings. Trouble-free performance over a long period of time, simple and economical maintenance, cleanliness, quietness, comfort, safety, and appearance are the criteria by which hospital flooring materials must be judged.

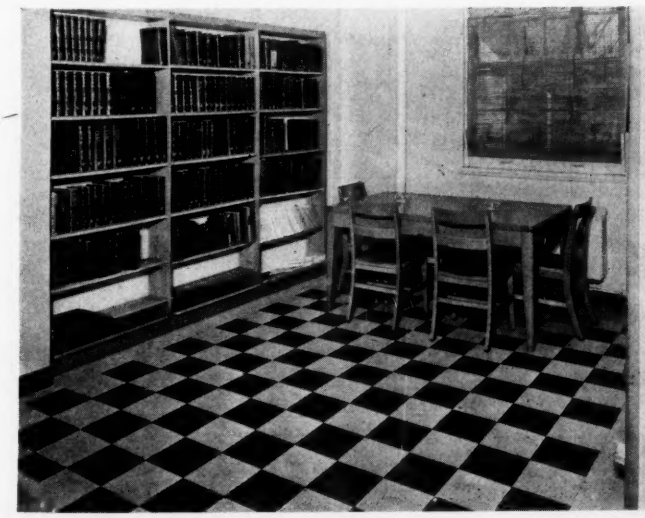
Cost of the material too often is a deciding factor, which it should not be except as the original cost is related to long-range performance of the material. Expensive maintenance and continual replacement can completely nullify initial economies.

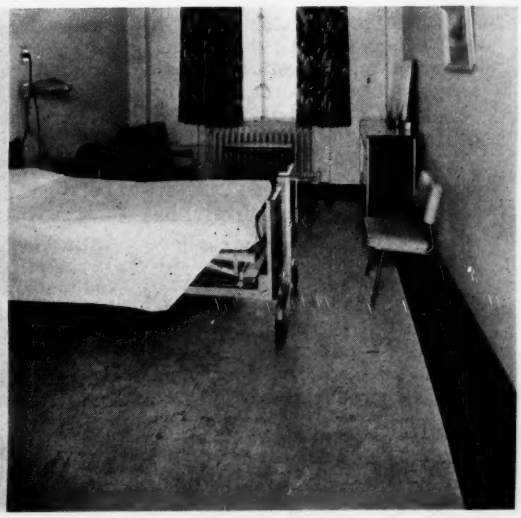
While many types of flooring give satisfaction in several different respects, the problem of the specifier of hospital flooring is to find the material with the greatest superiority on all counts. With these considerations in mind, rubber flooring has become a leading choice for hospital installations.

Rubber flooring is a flexible, long-wearing, smooth-surface material. It is made by mixing raw rubber, coloring materials and other ingredients into a homogeneous mass, which is then calendered, vulcanized, sanded to gage and cut to size.

It is available in roll goods and in squares, the most popular being 6″ x 6″ and 9″ x 9″, and also in oblongs and larger squares, matching or contrasting feature strips, border material, cove base, and stair treads. It comes in several different thicknesses—the most popular for hospital use being 1/8″ and 3/16″—and in dozens of colors and combinations for unlimited design possibilities.

As it is vulcanized and permanently





(L. to R.) Checkerboard pattern rubber tile floor helps give quiet atmosphere in library at Children's Hospital, Akron, Ohio. Light-colored but easy to keep clean is this rubber tile floor in patient's room in Graduate Hospital, Philadelphia, Pa.

set under controlled heat and pressure, it acquires a smooth gleaming surface which can be maintained indefinitely with proper care.

Proven Durability

Modern rubber flooring is one of the most durable materials known. Rubber floors installed in stores and buildings as long as 25 years ago are still in use and show no appreciable signs of wear. A "walking wheel" test by the National Bureau of Standards showed that after 24,000 cycles, the average depth of depression made by the walking wheel in the rubber tile was none in some cases and only 1/1000 of an inch in others, depending on the character of the sub-floor beneath the tile and the bonding agent used to keep the tile in place. When the walking wheel was surfaced with abrasive cloth, the average wear after 24,000 cycles was only 8/1000 of an inch. The general conclusion drawn from these tests stated that rubber tile was "durable even under severe service."

In another study, it was reported that after approximately 12,000,000 pairs of feet had walked on its surface, measurements of this section (of rubber flooring) with micrometer calipers failed to show any appreciable wearing down of the tile. Moreover, its appearance was just as fresh and new as the day it was originally laid.

These and similar observations clearly show the high resistance of rubber flooring to surface abrasion. In addition, there are other factors which contribute greatly to the durability feature of rubber flooring. For example, it does not contract or expand appreciably with temperature and humidity changes, hence is not inclined to loosen, curl, shrink or warp. It has great tensile strength, and does not crack, split or chip. Because it is a homogenous mixture, the color and design is permanent—it cannot scuff off or wear away.

Among resilient floor coverings, rubber is one of the least susceptible to indentation—even under extreme heat conditions. Rubber's natural resilience allows it to compress and then return to normal without any appreciable permanent "set".

Clean, Quiet, Safe

As a clean and sanitary material, rubber flooring is outstanding. It makes no dust or lint itself, and the dense, close-grained surface prohibits any embedding of dirt or seeping in of moist soil. Many stains wipe off with just a damp cloth; more severe spots respond to a light rubbing with fine steel wool. Grease, oil and strong alkalis are rubber solvents and can be injurious if allowed to remain on a rubber floor for a period of time, or if the floor is subjected to these materials repeatedly. However, except in a few cases (as in certain types of industrial installations), this type of spillage is not a problem.

Its high resistance to all types of damage makes rubber an inexpensive and easy floor to maintain. Replacement and repair are practically nonexistent. Routine care is uncomplicated and accomplished with a minimum of disturbance. It consists only of dust removal, occasional damp mopping, and buffing.

Noise reduction is of prime importance in a hospital. Foot traffic is heavy and, for that reason, a quiet floor can do much to minimize sound in corridors, wards, patients' rooms, dining rooms and offices. Rubber, being a natural sound deadener, is highly

(Continued on page 340)

Now, the "hands" have it better with WYANDOTTE!

Wyandotte has readied a new complete line of hand dishwashing products. The line meets every hand dishwashing need with the best performing, lowest "use-cost" products available!

Heading the list is "NEW" NEOSUDS*, a "superior" product that forms lavish suds . . . dissolves rapidly, rinses freely, has long solution life . . . makes glasses and dishes sparkling clear.

NEOSUDS is available in drums, as well as in handy new Dual-Pak cartons — three economical "control" packages per case. Dual-Pak insures FACTORY-FRESH products!

Other outstanding Wyandotte dishwashing products are "NEW," spray-dried FAME, a quality product; KALSO, a good sudsmaker in soft to medium hard water, especially for aluminum utensils; H-D-C*, a soap product, for heavy duty washing of pots, pans, utensils.

Yes, the hands have it better with Wyandotte. Call in your Wyandotte jobber. He can recommend the right product to help you have better, lower "use-cost" results. *Wyandotte Chemicals Corp., Wyandotte, Mich. Also Los Angeles 12, Calif.*

HOSPITAL SYSTEMS DIVISION—DEPARTMENT 100
CROZET, VIRGINIA

(Continued from page 338)
desirable for all types of floors throughout the hospital. Footsteps that would pound on many other types of flooring material are reduced to the lightest of sounds on rubber. Furthermore, rubber flooring has the ability to absorb a certain amount of sound and thus helps to tone down external room noises. It is easy to see why rubber flooring becomes important wherever acoustics is a problem.

There may be places where the beauty of a floor is paramount to all other requisites. But most floors are primarily utilitarian, and a sure measure of their practicality is the safety factor. As has been mentioned, rubber flooring has the advantages of not warping, shrinking, splintering or curling. Thus, there is nothing to trip or stumble over. Rubber is essentially non-slippery. It can be kept bright with no wax or, if a high shine is desired, a very thin coat of self-polishing wax may be applied. In either case, safe, non-skid footing is virtually assured.

One other angle of the safety question which should be mentioned here is fire safety. Rubber flooring is noncombustible and fire resistant. A burning cigarette or lighted match dropped on rubber flooring will simply burn itself out leaving only a slight stain on the surface—it will not burn into the rubber. The stain can be removed with a damp cloth or a light rub with fine steel wool—there is no permanent damage whatsoever.

Beauty Underfoot

With all these virtues, it would seem to be almost too much to expect that rubber flooring could be one of the most beautiful of floor coverings, but it is. In both rubber tile and sheet rubber flooring there is a wide range of beautifully marbleized colors which adapt themselves to any decorating scheme, Rubber flooring thus fits in perfectly with the recent trend toward the use of more color in hospital rooms.

Rubber flooring scores high on another point—wherever walking and standing are an important part of the worker's job. Being resilient, rubber flooring tends to cushion footsteps and reduce fatigue for those who walk on it. This feature is much appreciated by hospital personnel.

Easy Installation

Rubber flooring can be installed easily and speedily over any subfloor which is dry, smooth, and clean. To insure satisfaction, the rubber flooring manufacturer's specifications should be followed. No floor covering will perform to its best advantage if there is any shortcoming in the subfloor on which it is laid. Therefore, proper preparation of the subfloor is vital.

Subfloors may be ordinary tongue-and-groove boards, plywood or concrete. Rubber flooring may also be laid over other types of smooth floors, including stone, metal, marble, or terrazzo, as long as the material is smooth, clean and free of all paint, varnish, wax, grease, etc.

Rubber is one of the most satisfactory flooring materials for use over radiant heating installations. It is an effective heat conductor—which means fuel economy—and it is not damaged in any way by the temperature of the slab.

A recent development now makes it practical to install rubber tile over on-grade concrete subfloors, that is, concrete slabs in direct contact with

HERE ARE SOME POINTERS ON

How to Keep Motors Efficient

By ERNEST W. FAIR
Bristow, Oklahoma

ELECTRIC motors abound in numerous places in the modern hospital plant as they perform scores of different services. Their continued efficient operation is a must in good management.

The period we are entering into also calls for greater attention to care and maintenance of every electric motor. Even higher costs of hospital operation demand greater attention to prolonging equipment life and keeping maintenance costs to the very minimum.

Recognizing electric motor troubles, correcting them speedily, and giving maintenance attention to prevention of these troubles will greatly simplify our obtaining maximum performance and efficiency from every electric motor throughout the hospital.

In paragraphs to follow are the more frequent troubles, their causes and remedies, that develop in electric motors. The responsibilities for application of this information rests equally with management and with the individual using every piece of equipment.

Bearings that are too hot to touch or are smoking may indicate a dry bearing with insufficient oil or oil rings not working, a dirty bearing, or a tight bearing which calls for scraping the bearing and shaft or replacing the bearing. In the latter case they have generally worked out of their slots and should be replaced.

A bearing may also be binding if the shaft has "come out of true" or the bearing itself may be out of true due to too much strain on the pulley. Also, it may have been loosened by vibration. In the case of too much vibration the trouble can generally be corrected by tightening the set screws holding the bearing in its journal housing.

Warm bearings are generally caused by an overload on the motor through heat being transferred from the rotor or the stator of the motor. In such a case we should see that either the load is decreased or a larger motor used on this particular job.

Smoking windings or charred wedges over the coils mean the bearing is worn on one side. If this is discovered soon enough the bearings may be realigned or new wedges inserted to correct the trouble. If the condition is permitted to remain too long the coils will have to be replaced.

When Motor Does Not Start

When a motor fails to start a great many things may be at fault. The more prevalent causes are:

(a) The voltage is too low and thus there is unsufficient torque, which calls for an increase of the voltage.

(b) A short circuit, caused by rough handling, generally in the stator windings. The damaged coils may be replaced or the break repaired by jumping the damaged coil or coils.

(c) Too great a load. This calls for load reduction or the installation of a clutch between load and motor.

(d) Tight bearings causing friction. Bearing caps can be easily loosened and if the condition continues the bearings should then be scraped.

A failure to start where automatic controls are used is generally found in the controls themselves where the general cause is that the solenoid circuit is not functioning due to the battery circuit being open, the arms holding circuit-breaking contacts are not working properly, or the contacts are dirty or burned.

(Continued on page 353)

FIRE EMERGENCY PROGRAM

Revised policies of St. Paul's Hospital, Dallas, Texas improve system which passed fire test in 1951

ON October 24, 1951 fire broke out in St. Paul's Hospital, Dallas, causing considerable damage. But no lives were lost, and evaluation proceeded with such promptness and lack of confusion that all the patients had been removed to safe locations in a matter of one half hour. (See "Fire Strikes St. Paul's, Dallas," HOSPITAL PROGRESS, December, 1951, Pp. 360-62.)

The outstanding manner in which this emergency situation was handled received high praise at that time. According to hospital authorities, credit belonged to the thorough indoctrination and fire safety program which had been in existence for some time at the hospital. Recently, the hospital revised its fire safety regulations. Against a background of literally having been put to the fire test, we reprint the fire safety program of St. Paul's in the hope that other institutions will be able to use parts or all in establishing similar programs for the safety of their patients.

Policy and Theory

(See the standard operating procedure posted in your own department)

All employees are held responsible for knowing

1. Location of fire extinguishers in their department and how to use the different types (water, soda-acid, carbon-dioxide). Learn this now. The safety officer will demonstrate.
2. The departmental instructions for fire procedure in their own department.

The alarm code for an actual fire is announced four (4) times over the public address system. It is:

Emergency — operation zero followed by location.

The All Clear is operation zero—emergency ended.

(For drills the code is: Emergency—operation caution.)

Don't shout "Fire!"—Don't alarm patients — Reassure patients — Avoid panic above all.

Fear and panic can do more damage than fire and smoke.

Other things to remember:

1. Normal elevator traffic will be suspended. Elevators which are permitted to run, because of safe distance from fire, will be reserved for helpless patients (if complete evacuation is ordered), and also for surgery and delivery room patients.

2. Each division not involved directly in a fire should concentrate its wheelchairs and litters as close as possible to the scene of the fire.

3. Suffocation by smoke causes more deaths in fires than actual contact with flames. In severe smoke, put wet mask over nose and mouth and keep close to the floor.

4. Don't get fire-neurosis. But be on the alert. Your watchfulness may mean the saving of many lives, much hospital property, and your job.

Evacuation

Every employee should understand the theory behind the well considered plan for removal of patients from an unsafe area to a safe area during a fire. Evacuating patients by use of the stairways and fire escapes involves such difficulties and possibilities for serious harm that every effort should of course be made in fire prevention to the point where evacuation will rarely if ever be necessary. Hospital personnel should not think in terms of complete evacuation when such may not be necessary. Think first in terms of moving patients horizontally, that is to say, from an unsafe area to a safe area on the same floor, beyond the fire and smoke barrier doors between Main and Annex. Therefore, unless there were an announcement to the effect that the whole building was to be evacuated, you would not move patients after they had been brought to the safe area on their floor.

Remember that the number of patients being moved by bed must be held to a minimum in order that congestion may be avoided in the safe areas.

Only if order for complete evacuation is given by fire chief are patients to be moved from safe area on their floor. If complete evacuation is ordered, supervisor has responsibility of evacuating patients downward, if possible, after floor above has been evacuated.

Example

Nursing division: Standard operating procedures in case of fire. (First activities:)

Fire in Your Area

A. Notify the operator immediately, telling exact location of fire and what is burning. Use moderate tone of voice. Don't shout "Fire".

B. Remove from immediate danger any patients in close proximity to fire and smoke. Close windows and doors in fire area immediately.

C. Fight fire with fire extinguishers. Use wet blankets if necessary. If hospital fire brigade is delayed in arriv-

ing, use fire hose if necessary. Brigade will arrive.

Fire in Other Department

A. Upon hearing alarm code, station one person on telephone to transmit instructions.

B. Remain in department unless ordered to go elsewhere. Do not move patients until you have instructions to do so. (Each department has its own procedures in case of fire.)

Remain calm—fear and panic can do as much damage as fire and smoke —Don't alarm patients.

(Second activities:) Note: Division supervisors are responsible for seeing that the theory, procedure and duties outlined above and below are understood, carried out and known by all their staff including Specials.

Fire in Your Area or in Other Department

A. Supervisors

1. See that all corridor and room doors are closed (wet blankets under door to keep out smoke, if necessary).
2. Keep someone at telephone for instructions. If fire is in your department, line will keep open.
3. Keep list of patients convenient and see that all are accounted for.
4. Assign someone to keep the smoke barrier door between Main and Annex and Dallas in the swinging position to prevent communication of smoke and fire to safe areas. Extremely important. Keep stairway doors closed.
5. Possible exits should be checked at once, to be sure there will be free access in case of necessity.
6. Do not expect to use elevators if fire at all near the elevator shaft.
7. Request visitors to leave hospital at once, unless they volunteer to stay and carry out orders.
8. Direct removal of patients, when authorized. (See "Policy and Theory.")

B. Doctors, Nurses, Aides, Orderlies

1. Doctors report to their assigned areas and remain there for instructions.
2. Nursing personnel on duty report to their respective divisions and patients and remain there for instructions.
3. If necessary that patients know of the existence of fire, reassure patients that alarm has been turned in and that emergency plan is in operation.
4. Close all doors and windows. If at night lower shades and turn on lights.
5. If order for removal is received, care should be taken that all patients are accounted for.
6. Nursing personnel off duty report to former place of duty immediately. Sufficient clothing is all that is necessary.

to **accelerate**

healing

DESITIN® ointment

the pioneer external **cod liver oil** therapy

New impressive studies[1] again confirm the clinical value[2-4] of Desitin Ointment to protect, soothe, facilitate healthy granulation, and speed healing even in stubborn skin conditions often resistant to other therapy.

in **wounds • burns • ulcers** (decubitus / varicose / diabetic)

diaper rash • intertrigo

non-specific dermatoses • perianal dermatitis

Protective, soothing, healing, Desitin Ointment is a non-irritating, non-sensitizing blend of high grade Norwegian cod liver oil (with its unsaturated fatty acids and high potency vitamins A and D in proper ratio for maximum efficacy), zinc oxide, talcum, petrolatum, and lanolin. Desitin Ointment does not liquefy at body temperature and is not decomposed or washed away by secretions, exudate, urine or excrements. Dressings easily applied and painlessly removed. Tubes of 1 oz., 2 oz., 4 oz., and 1 lb. jars.

samples and reprint[1] on request

4. Turell, R.: New York St. J. M. 50:2282, 1950.

(Concluded from page 346)

7. Turn off at once any oxygen tanks in operation, electric pads, etc. If patient under oxygen is to be moved, move oxygen equipment with patient, if possible.

C. Maids and Porters: Report to supervisor or nurse in charge.

D. Evacuation Theory and Procedure (See "Policy and Theory").

Removal of patients, when authorized, is as follows:

(First) Those in most dangerous areas. (Second or Fourth) Helpless patients: use stretchers, if available; if not, roll in top covers and carry with help by grasping blanket under patient. If thought advisable, mattresses may be dragged along the floor. (Third) Wheelchair patients: wrap in blankets and wheel to safe area or to exits. (Fourth or Second) Walking patients: wrap in blankets and lead to exits, or simple directions to them may suffice. All life-sustaining equipment, such as oxygen tents and tanks, respiration equipment, etc., should be moved with the patient if at all possible.

Fire Prevention

Employees are reminded that a fire prevention program is mainly a program of good housekeeping combined with a careful alertness on the part of the employee to the ever-present possibility of fire, be it small or disastrous. The following rules must be accounted as policy. Be sure that you comply with them wherever you work.

1. In patients' rooms, personnel should be on the lookout for an overload on current in the room. An overheated wire may cause a serious fire. Two (2) lights on an another electrical device running at the same time is a normal safe load for the current in that room.
2. Remove from use immediately any electrical equipment in need of repair.
3. Lamps in patients' rooms are never to be covered with anything whatsoever.
4. See that bed lamps never come into contact with mattress, linens, patient's clothes, etc., on the bed.
3. Sedated, irrational, lethargic patients should not be permitted to smoke. A city ordinance assesses a fine against anyone setting fire to hospital property.
6. See that the rules for non-smoking in areas where oxygen or other gases are being used, are observed by everybody. Where safety cans for gaseous and volatile liquids are provided, see that they are always used and correctly used.
7. Never allow an accumulation of trash in any area where you may be working or supervising. A constant watch is to be kept on utility rooms, porters' quarters, etc., to see that refuse of no kind is left there any longer than is absolutely necessary.
8. It is a supervisor's or department head's duty to see that all regulations concerning fire prevention are carried out by departmental and floor personnel. This includes observation of rules by special duty nurses.

Do not relax your vigilance

TO TRANSLATE YOUR PURPOSE INTO REALITY

When the means to success in your selected purpose seem beyond your own resources, it is no more than good sense to seek experienced aid.

Our experience is the most extensive in fund-raising. It is Bureau dedication that its own business interests must be subordinate to the high causes and human values which are its privilege to further.

We invite your inquiry with no obligation.

the ground. By using a new chemically-set floor cement it is possible to maintain a tight bond between the concrete and the rubber tile, even in the presence of moisture which destroys ordinary flooring adhesives.

Sheet rubber flooring has also proved to be an excellent wainscoting material for hospital corridors and other wall areas which are subject to bumping and scraping. The material is sufficiently resilient to resist shock, it does not need to be painted and it can be easily and quickly cleaned.

Conductive rubber flooring is a highly specialized product for use in X-ray and operating rooms and other locations where static electricity presents a hazard. It must be installed by experts who are experienced in its application.

Rubber Floor Care

Rubber floors, when correctly maintained, will give satisfactory service in appearance, durability and economy for a long, long time. Proper care is easy and inexpensive.

A new rubber floor should not be cleaned for several days after it is installed. During the waiting period, it can be protected with heavy paper placed over it.

Thorough cleaning requires the removal of dust and loose dirt with a soft push broom or a vacuum cleaner, then washing with an approved cleaner* dissolved in cold water, and rinsing with clean cool water. Mops should be used damp, not sopping wet, to avoid flooding the floor. When the floor is dry, it should be buffed to restore the surface luster.

If a wax finish is desired, self-polishing water base wax* should be used, as paste and polishing waxes contain solvents which are injurious to rubber. After waxing, the floor should be buffed again.

Routine care consists of dust and loose dirt removal, damp mopping with clean, cold water when necessary, and frequent buffing.

The long-time use of rubber flooring in hospitals—as well as in other institutions, public buildings, stores, homes, trains and ships—all over the world is proof enough of its success. Its advantages are easy to see and understand. But as must inevitably happen in a building or renovating project, the shadow of the budget looms large over every discussion of materials specifications.

Because floors are so vital a part of any building and one of the most costly, they should be considered early in the plans. All too frequently, the question of flooring materials is left until the last and the choice of materials is limited by the amount of money remaining in the building fund.

Rubber is one of the more expensive flooring materials, especially among resilient floor coverings. However, a hospital floor is something that should not have to be replaced for the life of the building, and thus a greater initial expenditure is justified if performance results in long-range economy.

On this basis, rubber flooring should be rated as a "best buy" for any hospital whatever the size of its building budget. ☆

*A list of approved rubber flooring cleaners and waxes is contained in a folder on *Approved Maintenance Methods for Rubber Floors,* available free upon request from the Rubber Flooring Division, The Rubber Manufacturers Association, Inc., 444 Madison Ave., New York 22, N.Y.

Lighting

(Concluded from page 334)

general illumination should be in balance with the intensities from the surgical lights themselves. This can be effected by very high general intensities from the so-called "Louverall" ceiling, or from recessed troffers, or from the fluorescent indirect lighting system. Fluorescent has been best accepted for the high intensities required in surgical rooms because of the relatively higher foot candles possible with the least amount of heat produced.

It must be remembered that illumination from skylights is not dependable, as even sunny days are not consistent. They afford too much brightness, whereas on dark days, winter days and emergency night times, there is not enough light. The logical answer therefore, is good, artificial general lighting, balanced to minimize contrast sensitivity and peripheral vision distraction. General artificial lighting will also facilitate the necessary preparations and routine activities outside of the immediate operating field, and create comfortable surrounding brightness.

Sterilizing and scrub-rooms: The rooms adjoining operating rooms should have a general lighting system similar to that in the operating room itself. In the first place, the very names of these rooms imply utter cleanliness, hence bright, comfortable illumination enhances this feeling of cleanliness. Lighting intensities of 30 to 35 foot candles are recommended.

Surgeons' rest room: Here a soft, subdued, lighting effect is suggested with only 10 to 15 foot candles intensity. The indirect system, either fluorescent or incandescent, with total absence of glare, enables the surgeon to relax, have his cigarette and change his clothes.

Lighting the X-ray department: In the X-ray room, 15 to 20 foot candles of general illumination is all that is required. The quality should be very good, however, to eliminate all direct and reflected glare. The lighting equipment should not interfere with the X-ray apparatus in the high frequency areas. Hence, wall brackets, either fluorescent or incandescent, are suggested.

Laboratory lighting: Good quality of lighting between 30 to 35 foot candles should be provided on the laboratory tables. Lighting must be well diffused to enable quick, strainless seeing of vials, tubes, etc. Avoid shadows from the lighting system. Light source should be out of the worker's normal field of view. Lighting must be pleasant to compensate for the substantial seeing work involved. Light must be cool so as to be of no discomfort to the workers. Recommendation number one would be the use of fluorescent, either indirect or recessed troffer.

Physical therapy department: This department may consist of treatment cubicles extending off the large area, which is used for office space, exercising, etc. There are no strenuous seeing tasks involved, but patients may be treated for long periods, and they lie or sit in awkward positions, so the lighting should be comfortable. This suggests totally indirect luminaires with nominal intensities of only 15 to 20 foot candles. Luminaires should be installed in each cubicle as well as the general area. ☆

EXPERIENCE COUNTS
IN
FUND RAISING

A good hospital administrator must have experience. In fund raising too, the campaign director with experience can make up the difference between success and failure.

That is why CUMERFORD campaign directors are men with fund raising know-how and proven records. Their experiene on similar campaigns is your assurance of the best direction.

Consult CUMERFORD before you plan a hospital campaign. There is no obligation.

Motor Maintenance

(Continued from page 342)

Insufficient Motor Speed

Lagging motor speed is the result of insufficient torque caused by the rotor field in the circuit, due to the discharge switch being in the wrong position. In this case the circuit between the exciter and the motor field windings should be opened. The trouble also may be caused by the motor load being too great.

Buzzing sounds in the motor are generally caused by a short circuited coil or group, an open circuit or a ground. The first named is generally due to mechanical injury or to broken down insulation, due to over-heating, which calls for installation of a new coil or jumping the injured coil as a temporary expedient. Where it is caused by ground trouble we should remove the ground as soon as possible and reinsulate.

Low growling sounds are caused by the rotor being out of the stator magnetic center, which in turn means that the motor itself either is not level or the shaft collars have shifted and there is thus too great end play on the shaft.

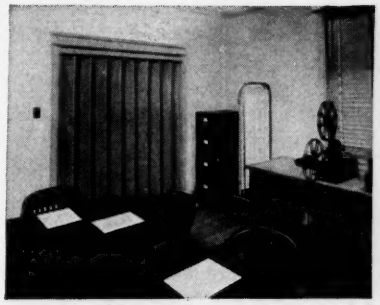
When the motor starts and runs, but heats up while the stator is cool, the rotor bars are loose or grounded because of abnormal currents in the rotor. The set screws holding the rotor bars to the short-circuiting rings should be tightened and soldered or welded and then the grounds removed.

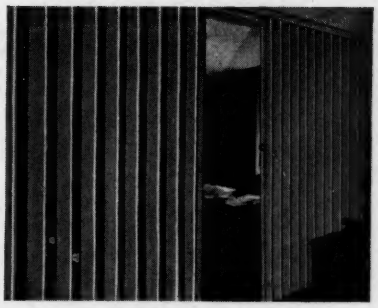
Half speed running on a wound rotor motor is caused by broken connections between the windings and the collector ring, or one brush is not touching and an open circuit in the rotor connections results. The break can be repaired or the worn brush spring replaced easily.

Causes of failure to start, in addition to those mentioned above, can be easily detected by first examining the fuses, then the relays, checking the starter carefully, inspecting the air gap and removing the belt pulley to find out if there is an overload.

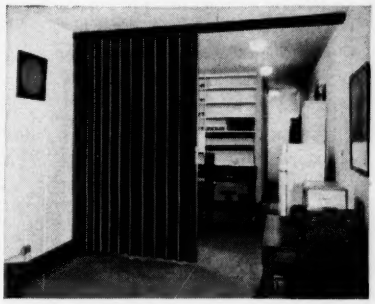
Dampness May Cause Trouble

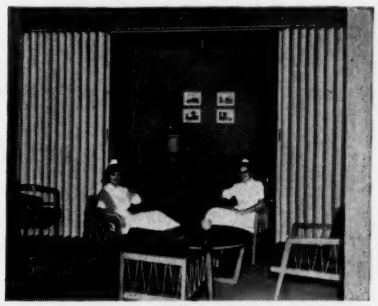
Explosions sometimes occur in windings while a motor is running hot. These are due to dampness which





MAKE EVERY FOOT OF FLOOR SPACE PAY ITS WAY!





● Your hospital is probably overcrowded—most are! Yet with construction costs so high you must do the most with what you have.

And that's where FOLDOOR fits into your plans.

FOLDOOR, the *quality* fabric-covered folding door, lets you put every foot of floor space to active use. As a movable wall it divides a large room into two or more semi-private rooms, separates one group from another, isolates patients in a ward. Many hospitals use FOLDOOR to create large closets, wardrooms, or waiting rooms—without costly construction or extensive remodeling!

As a door, FOLDOOR saves at least 7 square feet in each opening! It provides more room for equipment and eliminates possible injury from swinging doors.

FOLDOOR comes in a wide range of harmonizing colors, in two types of vinyl-coated fabrics—smooth or cloth-like texture. For further information phone your nearby FOLDOOR installing distributor or write direct.

- Attractive cornice included at no extra cost
- Rugged steel frame takes punishment—lasts and lasts
- Vinyl-coated fabrics are washable, durable and fire-resistant
- Smooth, silent operation

causes circulating currents between the coils and between any coil and the ground and thus creates a temporary ground or short circuit. The procedure here calls for baking the motor until all dampness is gone and then brushing it with a good insulating varnish. Sometimes it will be found that the coils have been punctured and need replacement.

Failure to start with the starter handle in starting position and a humming sound is a frequent trouble because the motor is trying to run single phase, an air gap is displaced or there is an open circuit in the stator windings.

When the motor is trying to run single phase it is generally because one fuse is blown or one overload relay is out of order. This can be easily handled by adjustment of the relay or replacement of the fuse. In the second named trouble the bearing is out of true and should be shimmed or replaced with a new bearing if it is possible to do so.

An open circuit in the stator windings is caused either by a short circuit which has punctured a coil, or by rough handling. Sometimes when a motor has been repaired and replaced it will seem to run light, with an unusual sound with intervals of speed changes. Generally this is because one coil in one phase has been reversed due to wrong connections when it was replaced or reconnected.

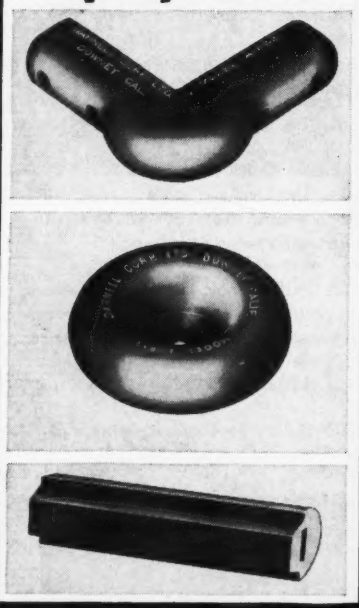
Burned insulation, brought about by one or more coils in the stator being too hot from a short circuit is due to mechanical injury or to broken down insulation. This calls for just one thing—replacement of the coil. However, if the new coil is not available, the motor may be used temporarily by jumping the injured coil.

Variable humming sounds in electric motors are usually caused by high resistance in the line (generally on long transmissions) or unstable speed of the prime mover on the alternator supplying the motor.

A great deal of electric motor troubles can be eliminated by making sure that the highest grade of oil is used in sleeve bearings and the best grade of grease on roller and ball bearings. It has been found that the average daily electric motor troubles in average installations result from either improper oiling or complete lack of maintenance attention to the motor involved. ☆

DARNELL NOW OFFERS A COMPLETE LINE OF

RUBBER BUMPERS *For All* HOSPITAL *Equipment*



These new angle, doughnut and strip type bumpers are made in a distinctive, non-marking neutral green color. They have high resiliency and a very tough abrasive quality. Walls, door facings and furniture will not be marred and beaten when you use these easily installed Darnell Rubber Bumpers.

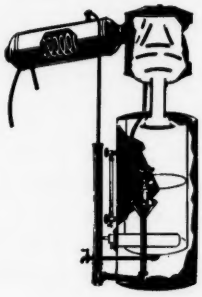
NO BACK SYPHONAGE OSMOTIC PRESSURE



NO IMPURITIES CAN ENTER THE NP WATER STILL (NON-PYROGENIC)

The outstanding feature of every NP Water Still (aside from dependably economical operation) is the fact that no impurities can enter. The resultant distillate is PURE, and suitable for the most exacting and critical needs. This is the result of careful engineering design, the use of the SINGLE COILED TUBE condenser, and the NP Impurity Discharger. The NP Water Still is the most advanced still on the market today.

Steam Heated Stills up to 250 gal. per hour. Electrically heated type, up to 10 gal. per hour. Gas Heated, up to 50 gal. per hour. Complete details and specifications promptly available.

Diack for Dependability

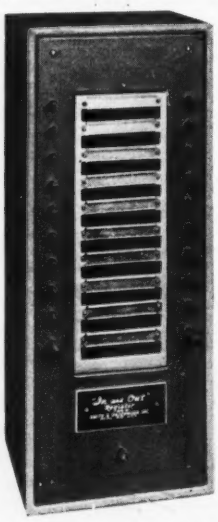
NEW!
"IN and OUT" REGISTER

Ideal for Hospitals and Clinics at central switchboards. Indicates presence or absence of doctors and key personnel. Also, indicates whether or not they are to be called (for instance a surgeon in the operating room). . . . New in principle: Passage of light from the one common source through plastic indicating tubes. Light emitted brilliantly from visible tube ends.

Note These Advantages—

1. No installation problem. Simply plug into any 110 V wall circuit.
2. No maintenance problem. Unit has one fluorescent light, compared to 20 bulbs in competitive units. We even affix a spare bulb to inside back of instrument.
3. Five (5) year guarantee against defective parts.
4. U. L. Approved.
5. Attractive two-tone green, gray, blue, or cream-colored exteriors.

SIZE: Ten names, performing two functions—same machine, 20 names if used only to indicate presence or absence.



Lowest priced register of type on market—Write today for information.

Diack Controls
SINCE 1909

By Far the Most Popular Sterilizer Control

A Standard for 43 Years!

HOW THE DIACK WORKS:

When you wrap your dressings include a Diack Control at the center of each pack. Load the sterilizer and insert one or two Diacks well down between the packs. Then autoclave.

When the charge has been run examine the Diacks placed among the packs. If melted send the load to surgery or store. In surgery when the packs are opened nurse should give final check to complete steam penetration of packs by examining Diack Controls previously placed at the centers of the packs. A melted Diack is your assurance of clean, safe dressings.

Use Diacks in sterilizing rubber goods and liquids at 250°.

PRICES:

1 Box (100 Controls)	$3.90
5 Boxes (100 Controls)	3.70 ea.
10 Boxes (100 Controls)	3.50 ea.
50 boxes (100 Controls)	3.30 ea.

INFORM CONTROLS

an aid in Control of Epidemic Infant Diarrhoea

If you are following the recommended technique calling for terminal heating of formula at 230° for 10 minutes please recall that 250° (not 230°) and 30 minutes (not 10 minutes) is used in general sterilization.

Therefore, when you use only 230° for just 10 minutes you must be sure that this minimum condition is fully achieved inside the formula—we repeat—inside the formula!

Actually, several minutes of the 10 minute exposure are taken to heat the milk to 230° and only during the remaining few minutes is the liquid held at this temperature. The full 230° time cycle is a variable depending upon several factors, viz., efficiency of autoclave, size of load, steam head in lines, viscosity of formula, etc.

However — there is now available a means of checking all these factors — of making sure your formula is safe —

"every plunger fits every barrel"

B-D MULTIFIT® *Syringes*

You can cut syringe costs at least 40% with B-D MULTIFIT Syringes. In one recent study of five hospitals with a combined bed capacity of 1774 patients, use of B-D MULTIFIT Syringes reduced syringe costs an average of 55%!

HERE'S HOW B-D **MULTIFIT** SYRINGES MAKE SUCH SAVINGS POSSIBLE:

Lower RATE of Replacement
—the clear glass barrel virtually eliminates loss from friction and erosion.

Lower COST of Replacement
—in case of breakage, you lose only the broken part—the unbroken part remains in use.

B-D MULTIFIT Syringes provide *time* savings, too—ease and speed of assembly cut handling time, free personnel for other tasks.

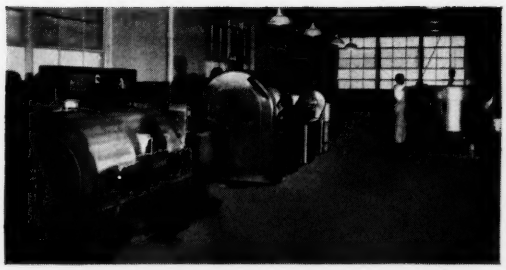
Laundry Planning Service Helps You

- **Cut Labor Costs**
- **Improve Quality**
- **Maintain Ample Clean Linens**

Hospitals throughout the Country depend upon American for help in planning laundries with smooth work flow, lower labor costs, and high quality work. They know that American's expert Planning Service gives them equipment most practical for the job at hand . . . equipment that is easy to install and maintain, simple to operate, and designed for many years of rugged performance.

American's Planning Service—based on the experience of over 86 years—is available without charge or obligation to your Institution. And our service goes far beyond the supervised installation itself. Our completely staffed, coast-to-coast organization offers you responsible follow-up and a willingness to serve you at any time.

We'd welcome the opportunity to talk over *your* problems. Just say the word.



American installation at 147-bed St. Joseph Hospital, Burbank, Cal., improved service, reduced laundry work week one day with 11 less operators.

American-planned laundry department at 110-bed St. Francis Hospital, Greenville, S.C., was planned to provide anticipated capacity for future growth.

New 150-bed Our Lady of Peace Hospital, Louisville, Ky., included a completely American-equipped laundry in the initial planning.

400-bed St. Mary's Hospital, St. Louis, Mo., handles complete linen needs for itself and a new children's home with this American-planned laundry.

Simmons' Pictura adds the modern touch at Chicago Memorial

The 100-Room Chicago Memorial, Chicago's oldest private hospital, has been modernized completely with Simmons equipment. Shown here is one of the newly redecorated rooms equipped with Simmons "Pictura" furniture in Slate Gray with Pale Mist. Decorating and furnishing hospital rooms with an eye to color, warmth and attractive styling does away with the cold institutional atmosphere of yesterday, helps speed patients' recovery. Yet nothing could be more practical or easier to maintain than this sturdy, fireproof steel furniture, with its durable, baked-on Simfast finish.

FURNITURE IN ABOVE ROOM:

BEDS—H-846-3-L-171, semi-panel style with all-purpose features and Deckert Multi-position Spring. (See pages 2, 3 and 5 for details.)

DRESSER—F-155-2-BF, provides ample space for clothing and extra linen. Top drawer has center partition. Self-banded Zalmite Top.
Top.....19 x 38 inches Height.....32 inches

BEDSIDE CABINET—F-455-BF, with self-banded Zalmite Top.
Top.....19 x 16 inches Height.....34½ inches

CHAIR—F-742. Upholstered seat and back.
Height.....34 inches Seat.....18 x 15 inches
Floor Area.....18 x 22 inches

CHAIR—F-763. Inner-spring cushions, removable for cleaning. Plastic Arm Rests.
Height.....39 inches Seat.....20 x 30 inches
Floor Area.....23 x 36 inches

FOOT STOOL—F-909-R. Steel legs offset to prevent tipping. Non-slip rubber top and feet.
Height.....9 inches Top.....12 x 16 inches
Base.....13 x 18 inches

OVERBED TABLE—F-885-F, double hinged top permits use from either side of bed.
Minimum Height.....30 inches
Maximum Height .....45 inches

"PICTURA" — BY SIMMONS

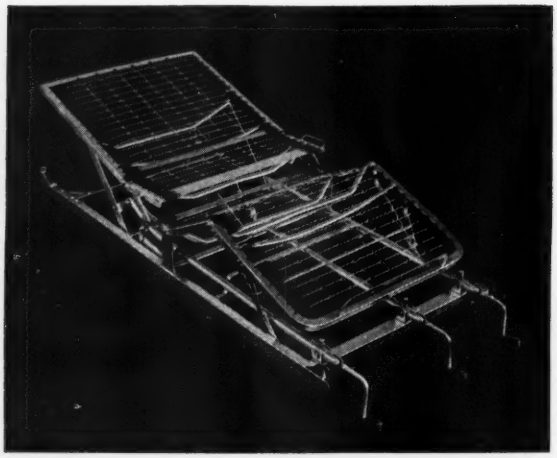
An entirely new concept in steel furniture, blending attractive color and contemporary styling into smooth unbroken lines that mean easy maintenance. "Pictura" does away with protruding pulls. Self-banded Zalmite tops in harmonizing colors are burn, scratch and mar resistant.

VAN-D-DRESSER F-155-26. A space-saving vanity, desk and dresser combination in modern "Pictura" styling.
Top.....21 x 49½ inches Height.....30½ inches

Write for Catalog No. 27 showing Simmons complete line of hospital equipment.

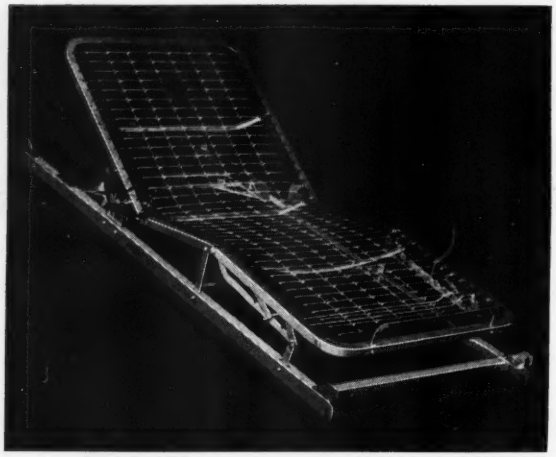
METAL FURNITURE AND SLEEP EQUIPMENT FOR EVERY HOSPITAL NEED

Three SIMMONS Quality



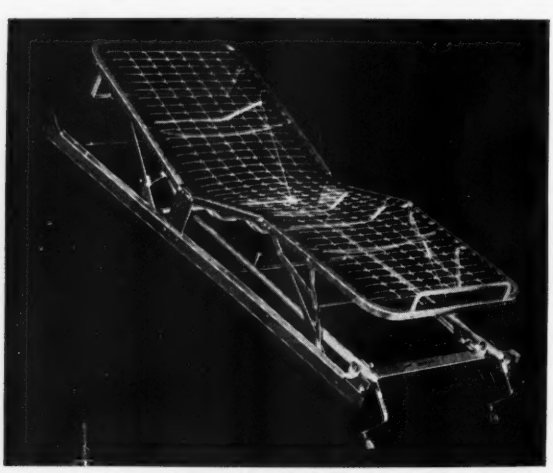
SIMMONS Improved Deckert Multi-position Spring—L-171

Here is the most versatile hospital spring in use today. Operating smoothly with three cranks, it differs from all other similar models because a free-moving center wing section permits adjustment to a wider range of spring positions. Thus, this 4-section spring permits placing the heaviest patients in many more positions for treatment and bedpan service than any other spring. The Improved Deckert Multi-position Spring may be used on most Simmons bed ends. (See Selection Chart—page 5.)



SIMMONS Side-Adjusting Spring—L-190

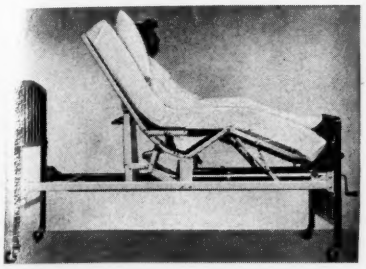
Simmons Side-adjusting Spring was designed to help take a part of the work load off the shoulders of nurses and other hospital staff members. It permits convalescent and other non-critical patients to help themselves change posture for reading, eating, and other routines. The spring, however, can be locked by the nurse in Fowler, shock, hyperextension and other positions. All operations, either by patient or nurse, are done with lever mounted at bedside. The Side-adjusting spring may be used with all standard Simmons bed ends. (See Selection Chart—page 5.)



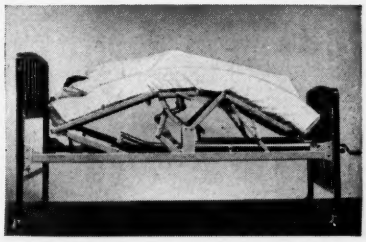
SIMMONS Improved Two-Crank Spring—L-148

Simmons Improved Two-Crank Spring offers many advantages not obtainable on old-fashioned two-crank models. The spring base has been redesigned to allow foot and head ends to drop below horizontal, thus permitting the spring to be adjusted to Trendelenburg, Fowler, hyperextension and other positions heretofore impossible on two-crank springs without the aid of blocks or elevating items. Now the head section can be lowered by cranking, thus eliminating lifting or straining. Spring fabric, frame and base are finished in aluminum. The Improved Two-Crank Spring may be used with most Simmons bed ends. (See Selection Chart—page 5.)

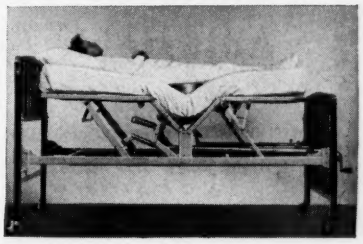
prings to Choose from



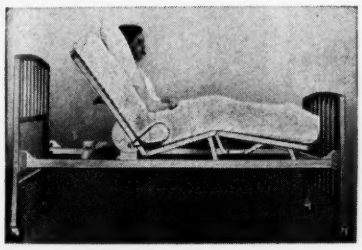
High sitting position. The Deckert Multi-position Spring provides an excellent cardiac sitting position. The center wing section permits a higher, firmer seat, which increases the elevation of the heart and lung areas in relation to the lower extremities. The position created is more comfortable because of the better distribution of the patient's weight, and the proper support given the spinal column.



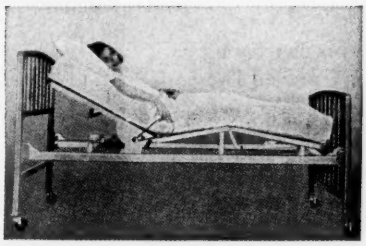
Reverse spinal and polio positions. This spring position is the same as for a complete range of hyperextension positions. With the patient placed prone, face down, this position is used in polio cases of muscular contraction of the spine, for rectal examination and surgery, and as an oral or nasal drainage position.



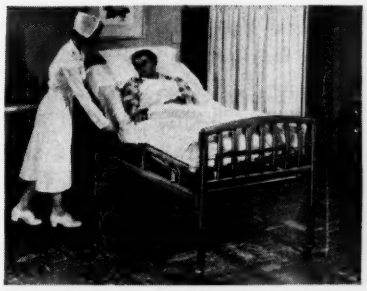
Bedpan positions. One nurse can easily take care of a completely helpless patient, even if he is unusually heavy, without lifting or straining, or disturbing the patient greatly. Patients can be put on the bedpan in sitting or horizontal positions, which is important in handling paralytic, comatose or cast patients.



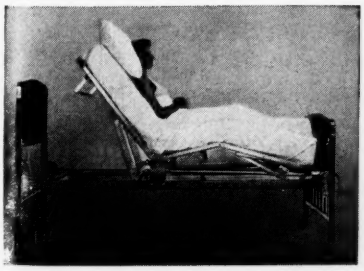
High sitting position. Convalescent patients who are permitted to do so, can adjust the Side-adjusting Spring to various positions without calling a nurse for assistance. Thus, the number of bell calls is reduced, saving the nurses' time and permitting them to devote their energies to more urgent jobs that require their knowledge and skill.



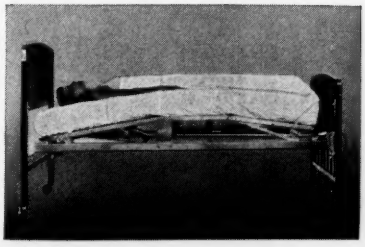
Reclining positions. From sitting to reclining post-operative positions requires little effort on the part of the patient—and none from the nurse. The patient simply pulls lightly on a handy lever, shifts her body weight slightly, and the spring responds gently. There is no danger of sudden, harmful spring movements.



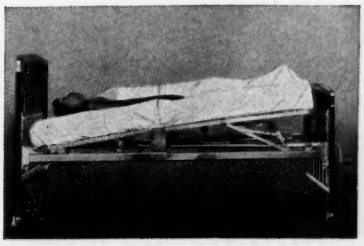
Nurse operation. While the Side-adjusting bed is ideal for convalescents, it nevertheless is a general purpose hospital bed spring. The nurse may place the spring in Trendelenburg, Fowler, shock, hyperextension and other positions with ease, locking the spring securely in the desired position.



Sitting positions. Because the foot sections of the improved two-crank spring can be dropped below the seating level, it is possible to place the patient in more comfortable sitting positions. By raising the head and knee sections still farther, the standard high sitting position can be obtained.



Hyperextension position. Because the new improved 2-crank spring permits lowering of both head and foot ends below the horizontal level, the hyperextension, Trendelenburg and Fowler positions are now obtainable—an advantage heretofore impossible on two-crank springs, without the aid of elevating items or blocks.



Exclusive Simmons feature makes it possible to lower the head section entirely by cranking, without lifting, straining or moving the patient. Again, once the patient is brought to the level position, Simmons ingenious head section stop makes it impossible for nurse or attendant to accidentally drop the head section below the horizontal level.

Simmons Vari-Hite* Adjustable Bed Ends

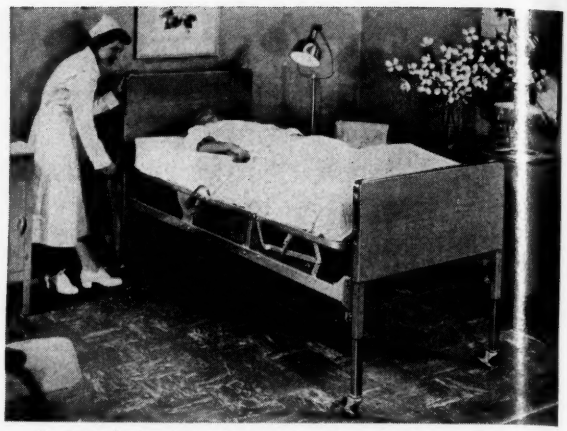
Now your beds can serve two purposes for better patient care

From standard hospital bed height (27 in.) to home bed height (18 in.) by a few turns of a crank—that's the big advantage Simmons Vari-Hite* bed ends offer!

Lowered to 18 inches, beds with Vari-Hite ends are safer. Patients face no unfamiliar height when getting out of bed. Eliminate need for footstools that may slip, tilt, and topple. Patients who are permitted to do so, can get out of bed without the aid of a nurse or attendant. Thus, patients gain confidence, and recovery is speeded. As a result, there is less demand for nurses' services with convalescents, and more opportunity to use their training to greater advantage.

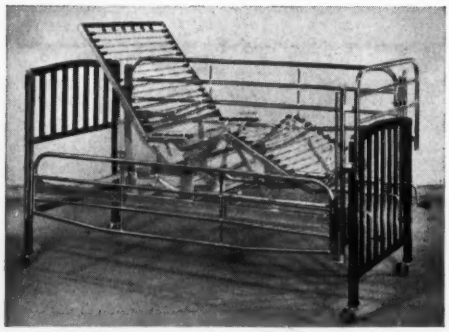
Vari-Hite ends fit Simmons Deckert Multi-position Spring, L-171; Side-adjusting Spring, L-190; and the Improved Two-Crank Spring, L-148. They are available in standard seven filler, and full panel styles. Both these styles are available with Simmons all-purpose features, which permit the use of a demountable Balkan Frame, safety sides and irrigation rods. (See Selection Chart—page 5.)

*Reg. Trade-Mark



Vari-Hite bed end in raised position. Top of spring is 27 inches (nursing height) from floor. Fowler or Trendelenburg positions may be obtained by adjusting ends by cranking to different heights. Bed illustrated, H-885-3-L-190.

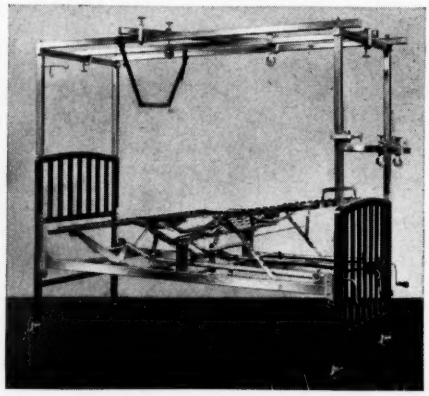
Vari-Hite bed ends lowered. Top of spring is now the normal home bed height, 18 inches from floor. Fears and tensions of incoming patients are relieved considerably, and recovery speeded perceptibly, when hospital beds are kept at this height. Bed illustrated, H-885-3-L-171. Safety Sides H-48.



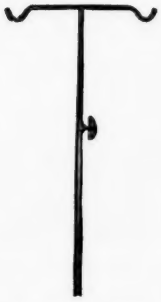
SIMMONS BED H-800-2-L-171 showing use of safety sides

The Simmons Bed shown here is made with special brackets for safety sides H-48, and End Guard Rail, H-85. Sides are 21½ inches high, and full bed length. Light, yet durable, a spring catch holds them securely in up position. All Simmons bed ends which show an order number suffix of -2, are built to accommodate these safety sides and ends.

SIMMONS All-Purpose Bed Ends and Equipment – Double Usefulness of any Bed



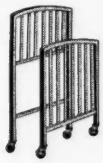
Shown here is a Simmons All-Purpose Bed, complete with demountable Balkan Frame, shaped fracture bar H-16E, and H-12M Irrigation hook. The spring is Simmons Deckert Multi-position, L-171. Simmons L-190 Side-adjusting Spring, and L-148 Improved 2-crank Spring also may be used with All-Purpose Bed Ends. All Simmons Bed Ends which offer All-Purpose features are designated by the suffix -3.



Irrigation Rod H-69. Also used on All-Purpose Bed Ends.

Use this illustrated guide when ordering SIMMONS bed ends

Simmons bed end numbers carry a distinguishing suffix—indicating that the bed end is available plain (-1); with brackets for safety sides (-2); or with all-purpose features (-3). For example, the number H-800-1 is the number for the standard plain bed end. H-800-2 is an end equipped with brackets for safety sides; and H-800-3 is the end with all-purpose features. Note the complete chart of Simmons bed end styles below:



H-800-1 Seven Filler style—1½" square

H-800-2 Same style, equipped with brackets for H-48 Safety Sides

H-800-3 Same style, equipped with brackets for Safety Sides and stainless steel baffle bars with sockets for demountable Balkan Frame.

H-803-1 Four Filler style—1.9" round tube, 3" casters

H-803-2 Not available

H-803-3 Not available

H-835-1 Five Filler style—1¾" Graceline tube

H-835-2 Not available (Use H-800-2)

H-835-3 Not available (Use H-800-3)

H-806-1 Not available

H-806-2 Seven Filler style—1½" square tube, equipped with brackets for Safety Sides, Eye Bed recommended with Deckert Spring L-171 only.

H-806-3 Not available

H-846-1 Semi-Panel style

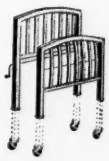
H-846-2 Same style, equipped with brackets for Safety Sides

H-846-3 Same style, equipped with brackets for Safety Sides and stainless steel baffle bars with sockets for demountable Balkan Frame.

H-815-1 Five Filler style—1½" square tube

H-815-2 Not available (Use H-800-2)

H-815-3 Not available (Use H-800-3)



H-880-1 Seven Filler style—1½" square tube Vari-Hite Bed End

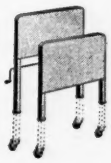
H-880-2 Same style, equipped with brackets for Safety Sides

H-880-3 Same style, equipped with brackets for Safety Sides and stainless steel baffle bars with sockets for demountable Balkan Frame.

H-817-1 Not available

H-817-2 Solid Panel style—equipped with brackets for Safety Sides

H-817-3 Same style, equipped with brackets for Safety Sides and stainless steel baffle bars with sockets for demountable Balkan Frame.



H-885-1 Solid Panel style—Vari-Hite Bed End

H-885-2 Same style, equipped with brackets for Safety Sides

H-885-3 Same style, equipped with brackets for Safety Sides and stainless steel baffle bars with sockets for demountable Balkan Frame.

F-885-F

Adjustable to 16 positions, one inch apart at light pressure of the hand. F-884-F—same as F-885-F except that it has porcelain enamel tray.

SIMMONS SINGLE PEDESTAL OVERBED TABLES

Available either with crank or hand grip adjusting mechanism. Brings you more features than any other overbed table. Big stainless steel tray and full width mirror, usable from either side, thanks to double hinged center section. This section may be raised for use by patients in high sitting position. Better balanced base and stronger post construction make these tables sturdier than ever.

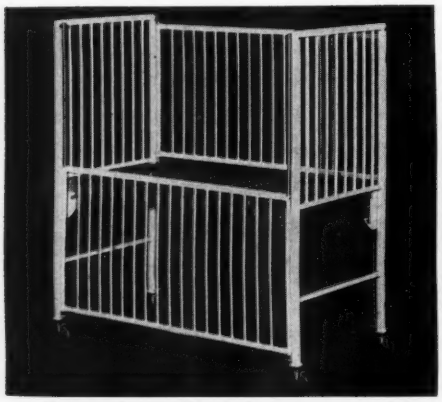
Top .....14½ x 31¼ inches

Adjustable Height, minimum.....30 inches

Adjustable Height, maximum.....45 inches

F-889-F

Crank Operated. Balanced base construction keeps table steady during cranking. F-888-F—same model with porcelain enamel tray.



SIMMONS HOSPITAL CRIB HC-209-1

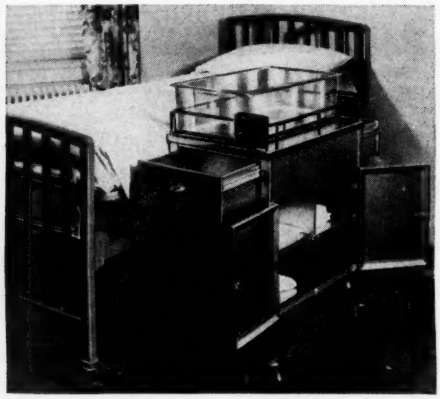
All steel construction. Sides are adjustable to six heights above fabric, and slide down to spring fabric height. Each side has two positive safety catches. Maximum opening between fillers—3 inches. Has chip-proof, washable finish.

Crib HC-209-1.....Size overall—26 x 42 inches

Crib HC-209-2.....Size overall—30 x 54 inches

Crib HC-209-3.....Size overall—36 x 60 inches

Crib HC-209-5.....Size overall—36 x 72 inches



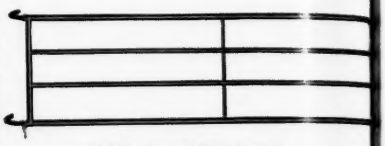
SIMMONS HC-271 ROOMING-IN BASSINET

This bassinet was designed to meet the demands of modern hospitals which advocate keeping infants with their mothers during post-obstetric convalescence. The base is a cabinet with drawers and enclosed shelves, in which all clothing and equipment used by the infant are kept. A steel frame holds the bassinet on top, and may be slid with ease over the mother's bed. Bassinet hooks to bed.

Dimensions:

Stand: Top, 19 x 30½ in; Overall height, 39¾ in.; Door Size, 12½ x 16⅞ in.; Drawer size, 6⅜ x 15⁷⁄₁₆ x 14 in.

Bassinet: Overall size, 30½ x 15½ x 10 in.



SAFETY SIDES H-99

No bolts to adjust. No tools needed for fastening. Is attached to bed end posts by self adjusting, spring-actuated hooks which are encased in protective rubber sheaths. *Height:* 19 in.; *Length* 69 in.

Maximum diameter of posts on which safety sides can be used.....2¼ in.

Maximum length of bed on which sides can be used.....87 in.

Minimum overall length of bed on which sides can be used.....81½ in.

IRRIGATION ROD H-68

Telescoping extension type, with two hooks. Closed length, 33½ in.; Open, 57½ in. Equipped with adjustable clamp for anchoring to hospital bed frames of the following sizes:

1¾ x 1¾ in.;
2 x 1½ in.;
2 x 1¾ in.;
2¼ x 1½ in.

BEDSIDE CABINET F-449-F

All-steel construction with square, tubular legs. Long-wearing Zalmite* top. Cabinet has adjustable shelf and socket for basin ring. Door with double wall construction is equipped with improved type hinges and spring catch lock. Rear of cabinet drilled to receive towel rod. Equipped with wood drawer guides and drawer stops. Metal rubber cushioned glides.

ALL DIMENSIONS ARE APPROXIMATE

*Zalmite is a high pressure decorative laminate which meets National Electrical Manufacturers Association specifications.

BEDSIDE CABINET—F-449-F

Shown with Drop Leaf, Attachment F-50-F

Top.....16 x 20 inches

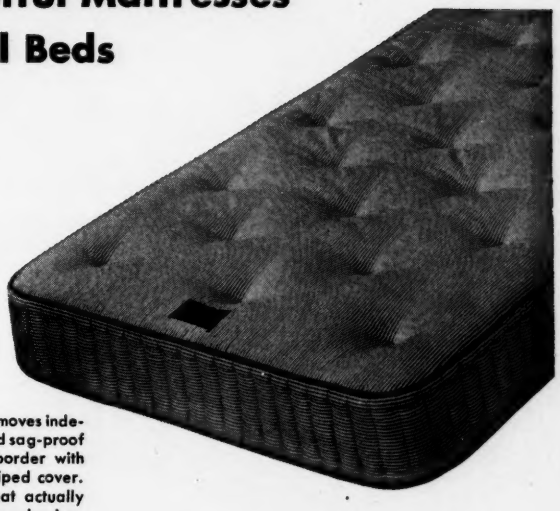
Height.....35 inches

DROP LEAF ATTACHMENT F-50-

Illustrated on Bedside Cabinet F-449-F

A convenient Drop Leaf, with Zalmite* top 16 x 24 inches. For use on Bedside Cabinet F-449 only. The "fifth" stationary leg attaches to right side of cabinet.

SIMMONS Firm, Restful Mattresses For Hospital Beds

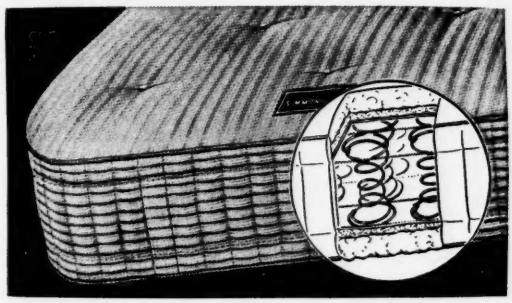


Beautyrest Mattresses, made especially for hospital use. Give patients the right kind of support at all times, without discomfort even during long periods of treatment or convalescence.

Beautyrest Mattresses are made to Simmons high standards of quality that assure hospitals many years of daily service with minimum expense for maintenance.

TO ORDER BEAUTYREST, specify mattress No. MS-2026.

features: (1) Separately pocketed coil springs; each coil moves independently. (2) Deep layers of firm, felted upholstery. (3) Patented sag-proof edge, with outer coil row attached separately. (4) Pre-built border with durable inner roll. (5) Long wearing standard 8 oz. woven striped cover. (6) Durable sheeting under and over coils. (7) Ventilators that actually "breathe" (two sturdy cloth handles on each side). (8) Sanitary French edge. (9) Flat button tufts.



SIMMONS HOSPITAL-BILT MATTRESS. Designed to specifications laid down by hospital authorities. Has improved 192-coil inner-spring construction, ***Three-Star Crushproof Border, with durable inner roll edge; spring construction covered by protective insulator and deep, firm layers of felted cotton linters; durable 8-oz. woven cover fabric—standard hospital specifications. *This mattress may be used with Multi-position Posture Springs.* Will give years of economical service. Order No. MB-197.

TRIPLE PANEL SCREEN F-587

The three sections are of continuous, seamless steel tubing, 1-inch square. Equipped with new, heavy triple-action hinges.

Standard equipment: Removable curtain rods; ball bearing, 2-inch casters; pressed steel sockets.

Approximate dimensions: Height 69½ in.; width of center panel, 31¾ in.; wing panels, 24 in.; rod length, center panel, 29¾ in.; wing panels, 22 in.; distance between top and bottom rods, 55 in.

SINGLE PANEL SCREEN F-585

(not shown) Made of continuous seamless steel tubing, 1-inch square. Comes equipped with removable curtain rods, ball bearing 2-inch casters, pressed steel sockets. *Approximate Dimensions:* Height, 69½ in.; width, 42 in.; length of rods, 40 in.; distance between top and bottom rods, 55 in. Curtains not furnished with above screens.

SOLID PANEL SCREEN F-553

A modern style. Made of sheet steel panel. Ball bearing 2-inch casters. Width, 43 in.; height, 66 in.

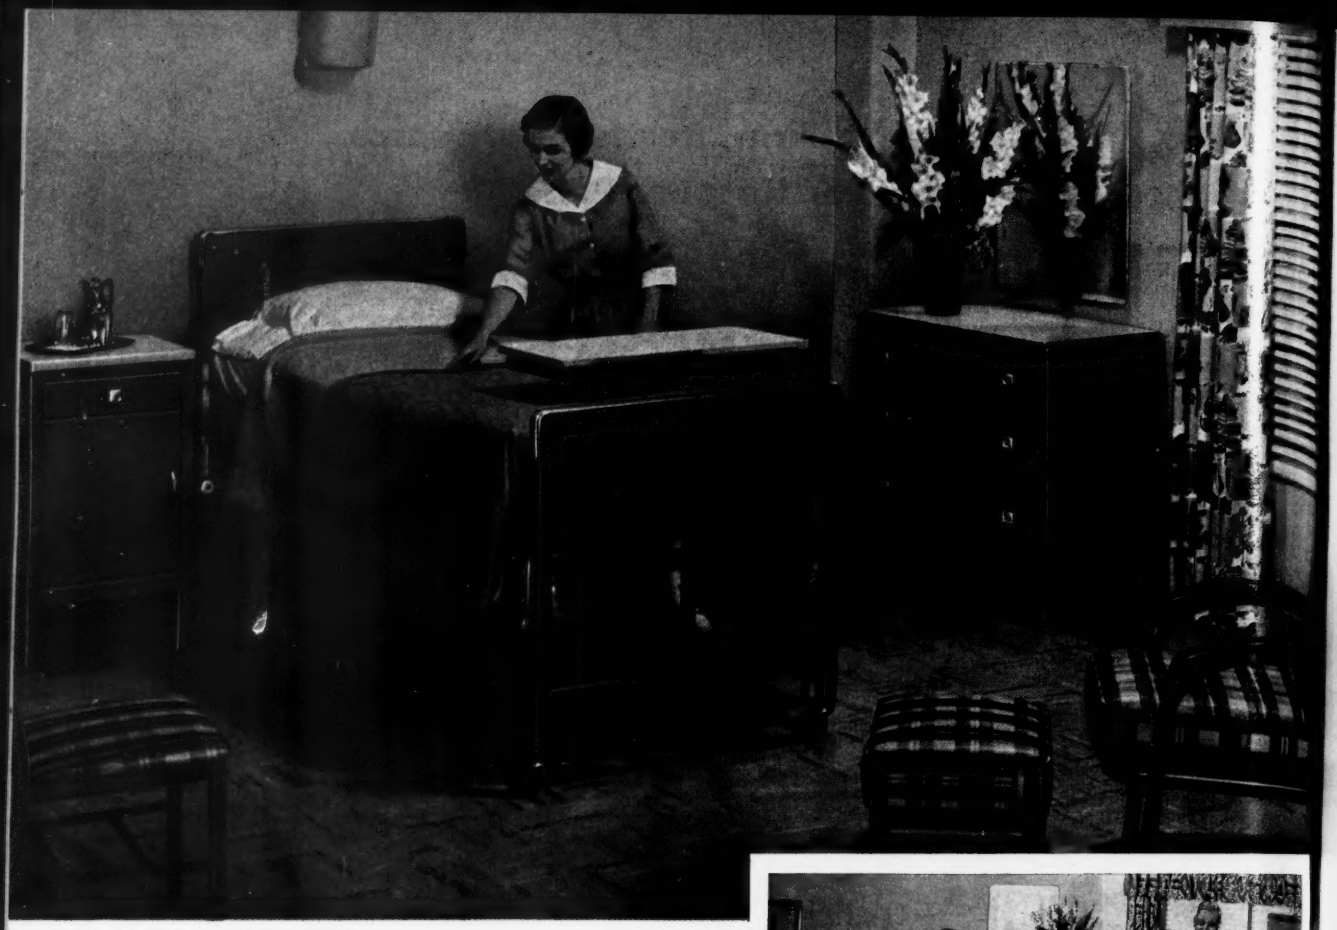
F-725 CHAIR

Tubular steel construction. Combines light weight with sturdiness. Steel cap glides. *Dimensions:* height, 35 in.; seat diameter, 15 in.; net weight, 10 pounds.

CHAIR F-732

Quality steel construction combined with low cost. Rear legs extend beyond rear of backrest to prevent marring wall.

Height .....34 inches
Seat .....18 x 15 inches
Floor space .....18 x 21¾ inches



SIMMONS HOSPITAL ROOM No. 83 IN DOVE GREEN

The room shown above is in use in the new 125-bed wing of St. Lukes Hospital, Kansas City, Missouri. It is decorated in quiet shades of pastel green, brown and rose, uses practical Simmons "152" Group Furniture with square drawer pulls; truly a room to meet all requirements of hospital administrators and patients alike.

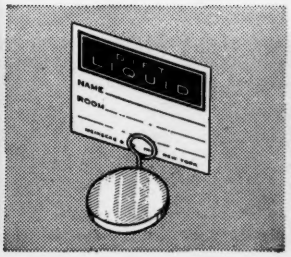
FLEX-STRAWS ARE THE CHOICE OF ECONOMY-WISE HOSPITALS

"VARICK" LOTION — The refreshing skin conditioner and massage lotion that far surpasses alcohol in therapeutic value.

MEDICINE CARD RACKS For orderly storage and use of Meinecke Colored Medicine Cards — a great time and space saver.

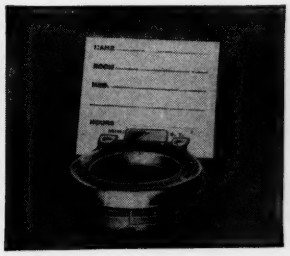


DIET CARDS and CARD HOLDERS provide easy identification since a different color is used for every type of diet.

STERILWRAPS— The revolutionary wrapping technique for sterile packs that saves time, saves space, and reduces costs.

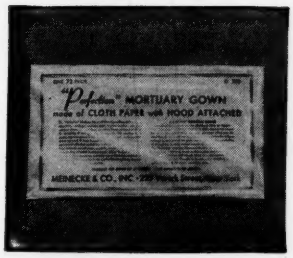
"HASSETT" SAFETY BELTS — Allow full freedom of movement, yet prevent mildly delirious patients from falling out of bed.

HAEMO - SOL —The original labor-saving no-scrub cleaner for laboratory glassware, surgical apparatus and surgical instruments.

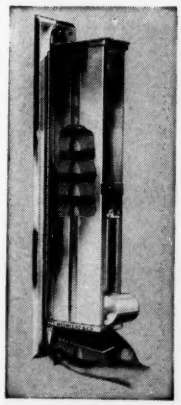


METAL MEDICINE GLASS COVERS—designed with spring clips for holding colored medicine cards, also used as pill trays.

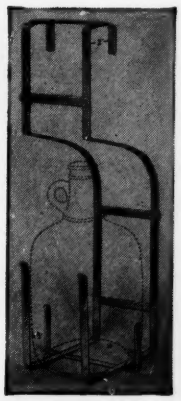
MEDICINE TRAY SETS — These are available in various sizes and styles to facilitate the proper dispensing of medicine.



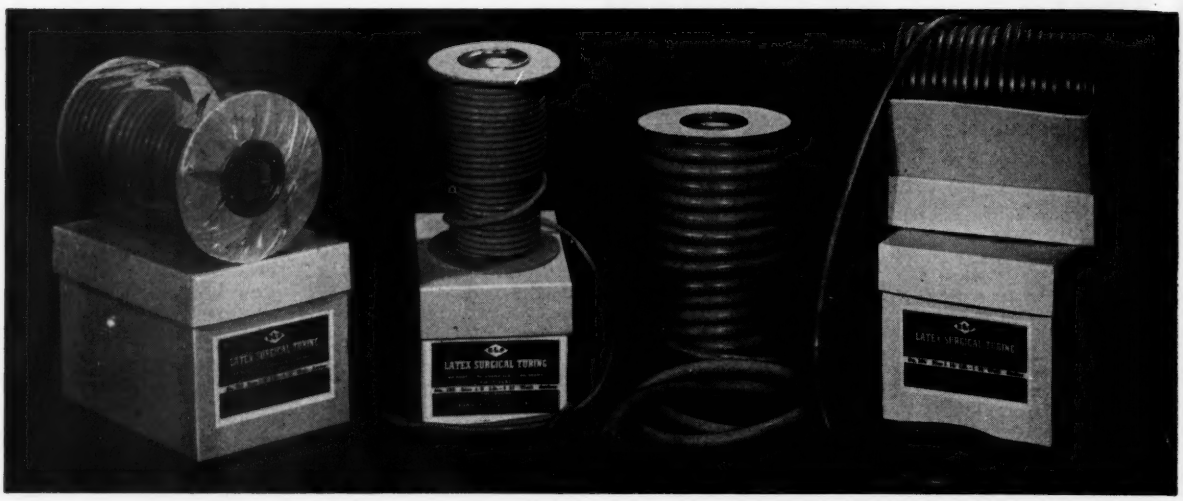
MORTUARY GOWNS — made of tough cloth paper with full hood attached.—"Perfection" gowns save linen, laundry work and labor.



"STERLING" BRUSH DISPENSER automatically dispenses hand brushes, at same time insuring maximum sterility.



"VARICK" — The drainage bottle rack that hooks on bed rail and holds standard 1-gallon bottle neatly under the bed.



Surgical Tubing You Can Depend On—

You can depend on RLP Pure Latex Surgical Tubing because:

It's Safe —

RLP Tubing is formed by a patented process in which no acids or minerals are used to coagulate the latex. Hence any ill effects which might result from such processes are eliminated.

It's Dependable —

This translucent, amber colored tubing is absolutely smooth both inside and out. This feature precludes the possibility of obstructions forming on uneven surfaces. There are no seams to burst because RLP Tubing has no seams.

It Has Long Life —

The Pure Rubber Latex of which RLP Tubing is made provides maximum resistance to storage and the effects of repeated usage and sterilizations.

What food inset arrangement DO YOU NEED?

One Conveyor Now Gives You a Wide Variety of Combinations for Your Selective Menus

● The top deck arrangements shown here are only a few of the many variations possible with the Blickman "Selective Menu" Food Conveyor. Eighteen square and rectangular insets are furnished in six different sizes. Variations in arrangement can be made to suit your specific needs simply by inserting the combination of insets you require. Your "selective menu" system can work smoothly and efficiently with this modern food conveyor. You can now offer your patients a great variety of meats, fish and vegetables, always kitchen-fresh and palatable. Two conventional round utensils provide for soup and broth. Two heated drawers provide for eight additional special diets. Blickman-Built food conveyors are made of enduring, sanitary stainless steel. It is the only standard truck made with a one-piece, crevice-free body and sanitary, seamless top deck construction. Consult us about your "selective menu" problems.

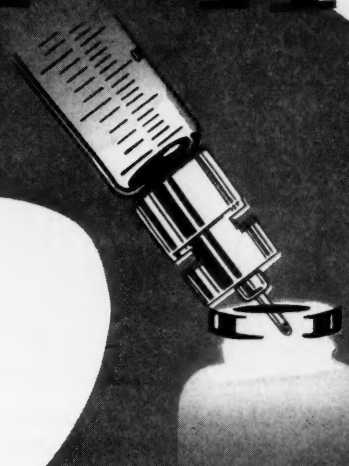
WHAT WAS THE

BIG IDEA

For years, Neanderthal Junior worked off his excess energy by drawing cartoons on cave walls. Then one day, quite by accident, he had a big idea! Why not use the limb of a tree to pry a boulder over the edge of a cliff?
The LEVER was a big idea.

WHAT'S THE BIG IDEA AT VIM?

Special *aspirating* syringe assures complete and positive aspiration with maximum ease.



the new

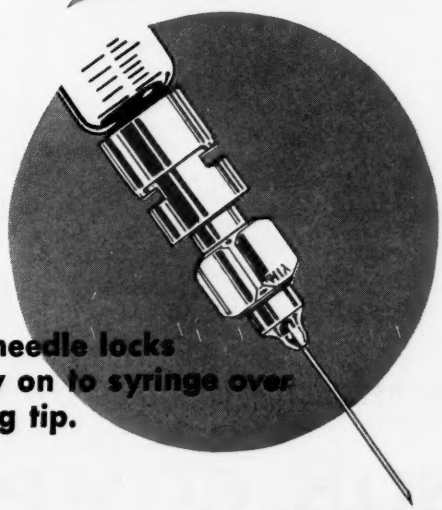
VIM *gabriel*

Trade Mark Reg. U.S. Pat. Off.

aspirating SYRINGE

Pat. No. 2626603

The short, large gauge aspirating tip easily penetrates toughest of vial stoppers, permitting easy withdrawal of the most viscous solution. Short tip just penetrates stopper, allowing withdrawal of entire contents without waste. Injecting needle never touches vial . . . contamination of contents virtually eliminated and needle life lengthened.



Injecting needle locks smoothly on to syringe over aspirating tip.

Designed to be used with VIM Stainless Steel and VIM Laminex hypodermic needles.

How PIONEER Surgical Gloves reduce hospital operating costs . . .

PIONEER Surgical gloves actually stand up under many extra sterilizations. Hospital conducted tests show no perceptible loss of strength after ten sterilizations—excellent condition after twenty is common. Made of finest quality virgin latex or neoprene, their higher strength (average 5000 lbs.) and greater elongation (850%) exceed Federal Specification ZZ-G-421-A.

Sheer but tough, these long-lasting gloves provide the extra comfort, finger-tip sensitivity and almost barehand dexterity doctors and nurses demand.

PIONEER'S exclusive Multi-Size Markings speed up, simplify glove sorting—save time and money.

PIONEER gloves are 100% inspected to assure complete protection to both doctor and patient.

ROLLPRUFs®

Exclusive flat-banded beadless wrists cling to surgeons' sleeves — no roll down to interrupt surgery. Flat-banding also reduces tearing.

No. RP-158 White latex

No. RP-168 Brown latex

Sizes: 6 to 9½

ROLLPRUF features also available in soft-textured *neoprene.* Neoprene is free of natural rubber allergen that sometimes causes dermatitis.

No. 75 LW Hospital Green neoprene

Sizes: 6½ to 9½

ROLLPRUF® *Rough* Surgical Gloves

have all Rollpruf features plus new non-slip rough textured grip areas on fingertips and palm. Safer, surer handling of instruments and moist tissue.

RP-169R Brown latex

Sizes: 6½ to 9

Regular Surgical Gloves

Finest quality latex, tissue thin but tough, with regular wrists.

No. 22 White latex

SQ-77 Brown latex

Sizes: 6 to 9½

U-35 Medical Utility Glove

New comfortable soft flock lined—no clammy feeling. Ideal for non-surgical hospital housekeeping and autopsy. Neoprene resists oils, acids, caustics, greases and detergents. Short curved fingers — roomy across palm and knuckles for working ease and comfort.

U-35 Gray neoprene, yellow flock lined

Small, medium, large

Obstetrical Gloves

Either hand style — any two gloves make a pair. Elbow length.

No. O-B White latex

Sizes: Medium (7, 7½), large (8, 8½).

Quixams

One glove (not a pair)

fits either hand. Short wrists permit easy donning for examinations, dressings, treatments.

White latex or green neoprene.

Small (6, 6½), Medium (7, 7½), Large (8, 8½)

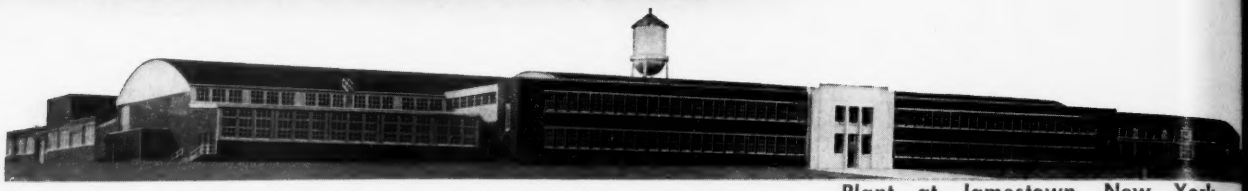
complete metal cabinet equipment for hospital use

EXCEL

EXCEL METAL CABINET COMPANY, INC., NEW YORK, N. Y.

EXCEL Metal Cabinet Company



Plant at Jamestown, New York. Largest in U.S.A. devoted exclusively to the manufacture of hospital cabinet equipment.

Excel Metal Cabinet Company has been producing superior metal hospital equipment casework for over twenty-five years. As the oldest specialist in this field, EXCEL has installed cabinet equipment in thousands of hospitals and institutions throughout the country. EXCEL manufactures the most complete line of hospital casework equipment available, including cabinets, work counters and special equipment.

EXCEL equipment is built to conform to the most rigid requirements of detail, design and construction to insure everlasting service under heavy hospital duty.

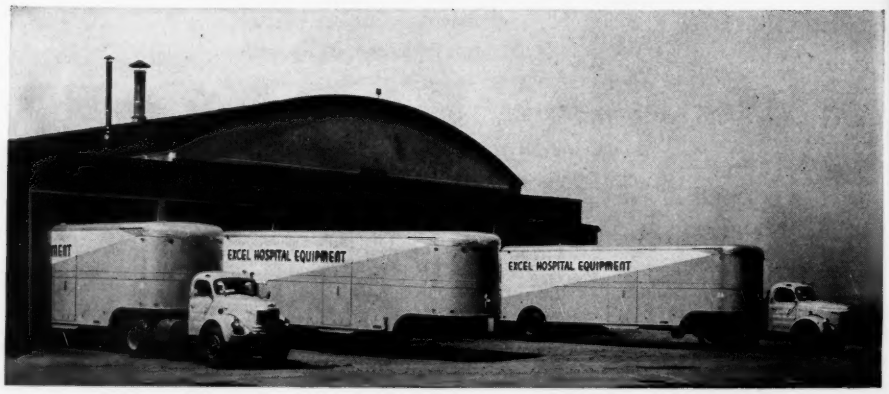
Leading architects specify EXCEL because of its ability to meet the highest standards of engineering, quality and installation.

On the facing page are listed a few of the prominent architects specializing in hospital construction, and their projects in which EXCEL equipment was installed. These architects are among the many who have found this equipment superior over a long period of years and who continue to approve EXCEL. This is proof of the quality, performance and satisfaction of EXCEL casework.

In addition to the established manufacturers of quality casework, the hospital casework industry today is comprised of cabinet manufacturers new in the field, and also those who have previously produced laboratory and kitchen grade cabinets. This results in a wide range of qualities being offered.

Built-in hospital casework is *permanent* equipment, and it is of the utmost importance that a quality grade of equipment be specified to assure a casework installation that will give maintenance-free service under years of heavy hospital duty.

An EXCEL installation is your guarantee of the best hospital casework available today.



Delivery of EXCEL equipment is made in our own fleet of trucks. This insures prompt delivery without damage.

All photographs shown in catalog are unretouched photos.

PROFESSIONAL
WASTE RECEIVERS
for
HOSPITALS, DOCTORS, DENTISTS, INSTITUTIONS, RESTAURANTS, SCHOOLS, THEATRES, REST ROOMS, FIRST AID STATIONS, BEAUTY PARLORS, OFFICE BUILDINGS

THERE IS A SANETTE FOR EVERY INDOOR WASTE DISPOSAL NEED

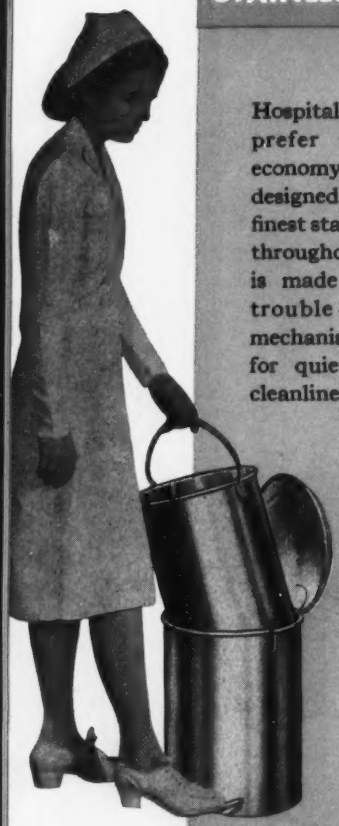
Sanette
PROFESSIONAL WASTE RECEIVERS

Model "H" Series . . . *Only Waste Receiver with a DUAL PURPOSE HANDLE*

Avoids contact with infectious waste

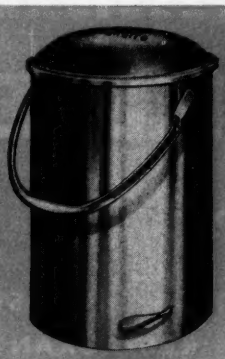
THE ONLY EXCLUSIVE PROFESSIONAL WASTE CAN

STAINLESS STEEL WASTE RECEIVERS

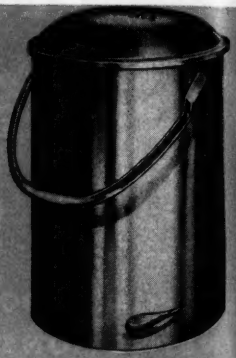


Hospitals and institutions prefer the long-range economy of this specially designed Sanette. Only the finest stainless steel is used throughout. Sterilization is made easy. And the trouble-free enclosed mechanism is unequaled for quiet operation and cleanliness.

MODEL H-12-AS
Stainless Steel Pail; Height 15" Dia. 10"; 12 qt. capacity.



MODEL H-16-AS
Stainless Steel Pail; Height 16¾" Dia. 11½" 16 qt. capacity.



MODEL H-20-AS
Stainless Steel Pail; Height 17½" Dia. 11½"; 20 qt. capacity.

Pail Handle is Always Outside . . . Away from Infectious Waste

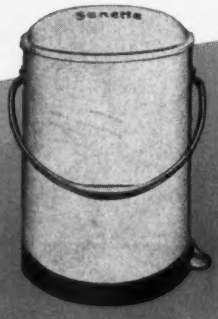
When the cover is closed, the entire receptacle can be moved about using the outside handle. This is the same handle that also removes the inner pail when the pedal is depressed and cover opens. Therefore, hands remain free from contamination at all times. This exclusive Sanette advantage is the greatest sanitary improvement ever made in waste receptacles.

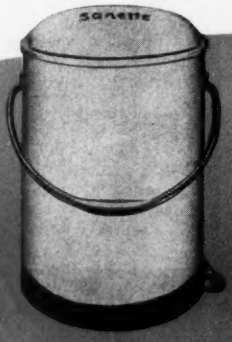
Step on pedal. Pail can be removed without contact with infectious waste.

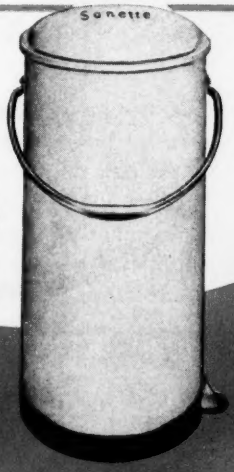
Cover closed . . . receptacle can be moved about with same handle.

Standard Finish WHITE ENAMEL

All with Hand-dipped Galvanized Pails







All Models available in beautiful Grained Walnut or Mahogany, silver lustre, cream white, ivory tan, neptune green, jade green, lakeside green or any special colors.

MODEL H-12
With Leakproof Hot-Dipped Galvanized Pail. Height 15"; Dia. 10"; 12 qt. capacity.

MODEL H-16
With Leakproof, Hot-Dipped Galvanized Pail, Height 16¾"; Dia. 11½"; 16 qt. capacity.

MODEL H-20
With Leakproof, Hot-Dipped Galvanized Pail. Height 17½"; Dia. 11½"; 20 qt. capacity.

MODEL H-28
With Leakproof Hot-Dipped Galvanized Pail. Height 24"; Dia. 11½"; 28 qt. capacity.

MODEL H-40
With Leakproof, Hot-Dipped Galvanized Pail. Height 28"; Dia. 11½"; 40 qt. capacity.

Stainless Steel Covers on All Models at Slight Additional Cost. Stainless Steel Pails available in Models H-12, H-16 and H-20 at slight additional cost.

Model "M" Series . . . *Introduces*

NEW PROFESSIONAL STYLING

In these fine deluxe models, the space-conserving utility of a modern cabinet-style design is presented for hospital, medical office, school, hotel and institutional use. Inside is a *round*, easy-to-clean pail. Lightest touch on recessed, rubber-coated foot pedal raises cushioned cover! Operates "quiet as a whisper". All moving parts are concealed in the dust-proof interior.

THE ONLY EXCLUSIVE PROFESSIONAL WASTE RECEIVER

STAINLESS STEEL WASTE RECEIVERS

ONE INVESTMENT, THAT'S ALL!

Continentalair M-4000

Fresh Air . . . Always Pure and Cool

Continentalair is the undisputed leader in iceless oxygen units because of its exclusive, one-piece cast aluminum cooling chamber which contains the patented Continental evaporator. This evaporator with its hundreds of tiny fins creates a 256 square-inch surface covered with a film of cool water which washes, filters and cools the air. All impurities absorbed by the film of water are continuously removed as the condensate empties into a stainless steel drip pan, effectively preventing cross infection. The quick action of the purified oxygen-mixed air through this remarkable new evaporator recirculates the canopy air 4 times each minute and can lower the temperature of the air in the canopy 25° in a room temperature of 90° — holds it within 1° of the control setting. High oxygen concentration is almost immediate.

Every part of the Continentalair M-4000 is designed and inspected for quality, top performance and trouble-free service. Costs only $695.00 (F.O.B. Cleveland) and includes three "zippered" transparent canopies and one 2-stage oxygen flow regulator.

Stock delivery — Visionair disposable canopies $5.80 each. Semi-permanent .003 or Permanent .005 heavyweight at slightly higher cost.

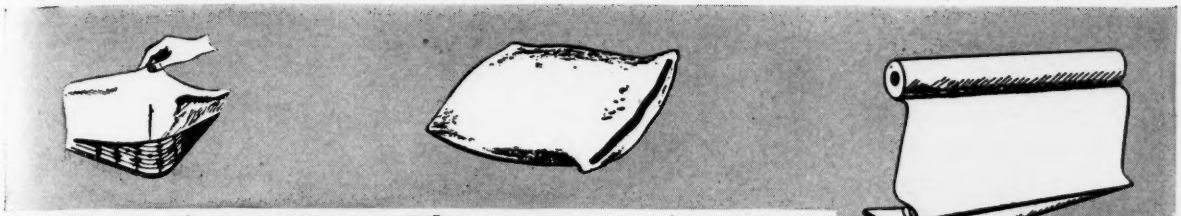
First in Hospital Service



Amazing New *Plasticon*

Always Stays Soft and Pliable

Plasticon Sheeting — This hospital sheeting never gets hard or brittle even after continuous boiling, sterilizing or autoclaving and is not affected by oil, water, grease, mild acids, brines or alkalies. It washes or wipes clean with ordinary soap and water. Thickness is 8 mill (.008). Price: 36" width only 90c per yd. 48" width: $1.15 per yd.

Pillow Protectors — The silky soft and rugged wearing qualities of Plasticon make it ideal for pillow protection. Made of .004 Plasticon with flap lock-in style PF 4..$13.80 per dozen, with jam-proof zipper PZ 4..$15.00 per dozen.

Plasticon Aprons—Order your supply of these rugged and boilable aprons that stay soft. Made of .004 Plasticon to outwear and outlast ordinary plastic aprons $15.00 per dozen.

Mattress Protectors — Protect expensive mattresses with Plasticon. Made of .008 Plasticon. Will fit standard size mattresses regardless of thickness. Easy to store — folds into compact package. Drop over style 1000 PD as shown, only $5.00 each. Contour 1005 PC $5.50 each. Cover-all style with zipper 1010 PZ $7.50 each.

Continental *Infantair* 1500M

4-Purpose Incubator—Oxygen Tent—Surgical Bed and Isolation Unit

New Perma-Vue hood is designed to make infant care *safer, easier* and *faster*. Has four entry ports for easier nursing care and a large removal port so contaminated articles can be removed without raising hood. Longer, higher bed permits unobstructed view of infant. Enough space for infants as old as six months. Nebulizer port permits increased humidity when needed — scale port provides opening for scale attachment so infant can be weighed without removing it from incubator.

Built-in ice container holds up to 10 lbs. of ice — rustless ice chute designed for easier, faster filling. Melted ice is removed quickly through dripless ice drain. Perma-Vue hood has adjustable air louvers, built in oxygen nipple and locks safely to any tilt position. Inside temperature and humidity gauges instantly readable. U. L. Approved electric controls — temperature holds to 1° of setting. Covered foam rubber mattress adjusts to Trendelenberg position for follow-up surgery or clinical work. Unit is completely portable and self-contained with locking brakes, nonconductive wheels and large storage compartment.

Price $390.00

CONTINENTAL HOSPITAL SERVICE, INC.

18624 Detroit Avenue • Cleveland 7, Ohio

Why hospitals prefer the National Class 31

Only National combines on one machine the four features so essential to hospital accounting:

1. Electric typewriter
2. Full, flexible amount keyboard
3. Full visibility of postings
4. Interchangeable posting control bars

ELECTRIC TYPEWRITER—National's fully electric typewriter makes the full description of each entry—so essential to hospital accounting—easy for the operator. Since the typewriter is an integral part of the National 31, all types of hospital accounting work can be completed on the same machine . . . without need for auxiliary equipment.

AMOUNT KEYBOARD—The fully flexible amount keyboard permits several digits of an amount to be indexed at one time. All depressed keys can be checked for accuracy, and corrected, before the amount is posted to the account.

VISIBILITY—Because both present and previous posting lines are always visible, balances and balance pick-ups can be printed at any desired position on the form, permitting each accounting record to be designed to meet the hospital's specific needs.

CONTROL BARS—Each machine can be equipped with as many Posting Control Bars as desired. Each bar is changed *in just seconds.* The 70 or more automatically controlled functions of the National 31 cut posting work to a minimum (reducing operator fatigue). What the machine does automatically, the operator cannot do wrong.

FREE— 127-page book, with 75 illustrations, "*A Complete Manual of Accounting Procedures for a General Hospital.*" Get your copy from your nearby National representative, or write to us at Dayton.

YOUR GUIDE TO BEAUTY and ECONOMY for HOSPITAL FLOORS and *Easier Housekeeping*

APPROVED HILLYARD PRODUCTS

All Hillyard finishing products for hospital floors are U/L approved anti-slip

4 SIMPLE STEPS	WOOD	Terrazzo Cement Magnesite	Marble • Slate Ceramic Quarry Tile	Asphalt • Rubber Linoleum
1. CLEANING	**All-purpose! SUPER SHINE-ALL No rinse! No scrub!** Faster wetting through 100% neutral chemical cleansing agents. Safer because it contains no alkalis or acids. Halves clean-up time of floors, walls, woodwork, equipment.			
2. SEALING	**WOOD PRIMER** for foundation sealing to provide smooth, easier-to-clean finished wood floor.	**ONEX-SEAL**—a combination seal and finish—prevents surface checking, efflorescence—provides a traffic-resistant beauty finish for hard-surfaced floors. ***NEW WHITE ONEX-SEAL** keeps white cement, marble, terrazzo, tile, *white*. No waxing. No yellowing. Adds light reflection to aid "seeing." (In cleaning use ONEXITE.)		**HIL-TEX**—seals off dirt-catching pores. Protects resilient floors against grease, moisture spillage.
3. FINISHING	**Self-Polishing SUPER HIL-BRITE WAX Slip-Resistant! Water Resistant!** One treatment will protect every floor in your hospital for months without re-waxing. Saves expensive strippings and re-waxings . . . saves 3 weeks work out of every month for your clean-up crew for other jobs . . . reduces material costs.			
4. MAINTAINING	**Safe! HIL-SWEEP DRESSING Not an emulsified oil!** Picks up dust—then completely evaporates. You can spray it or brush it on the floor. Won't load the mop. Has no flash point. Rags saturated with the solution will not burn. Safe on every floor, including asphalt. Gives you a dust-free floor with renewed lustre.

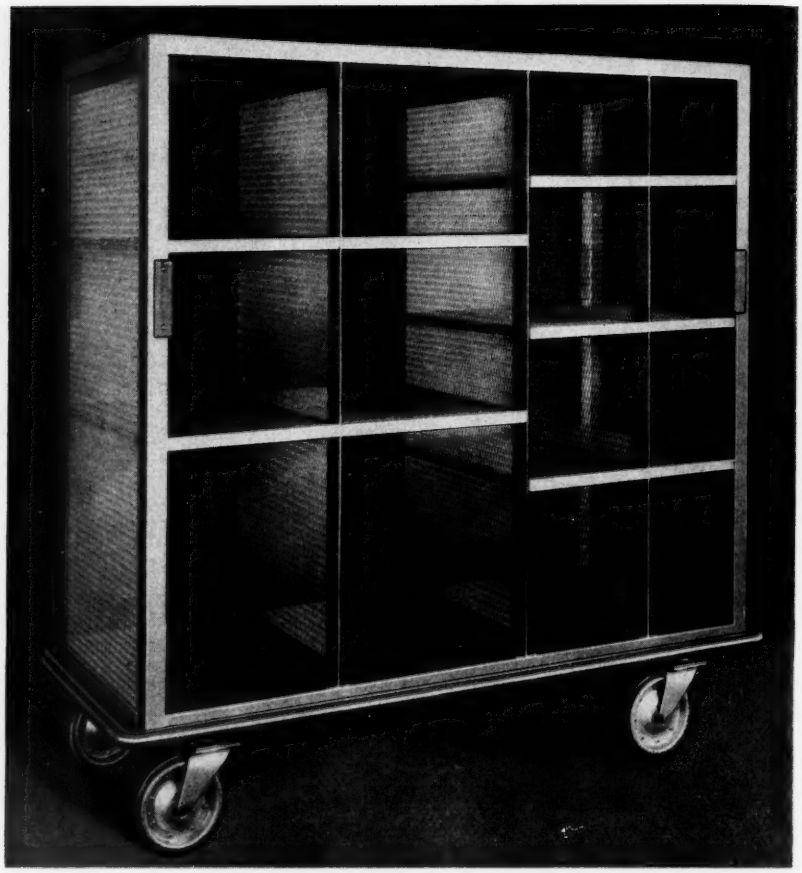
OF THESE

JARVIS & JARVIS

MODEL 1114

WARD LINEN TRUCKS

provide efficient and economic Clean Linen distribution at the UNIVERSITY of CHICAGO CLINICS



For the easy handling qualities so necessary to this large adjustable shelf servicer, we have provided it with 8" heavy duty double ball bearing swivel plate casters. The wheels are heavy duty cup and cone ball bearing steel disc type, with positive clincher grip tires of new live rubber. The tires are guaranteed not to creep or loosen in service, yet, when worn after years of service, can be easily replaced without the use of special tools. Both the caster swivel bearings and the wheel bearings are provided with fittings for pressure type lubrication.

The servicer illustrated was designed for transporting from the linen room to the patient floors all the linen and accessories necessary for servicing a minimum of twenty beds.

In the procedure set up at the University of Chicago Clinics, a pair of these trucks is assigned to each of fifteen linen stations. Each morning in the central linen room a truck for each station is loaded with the various items determined by the patient census on the floor or station concerned. The truck is then delivered to the station and placed in the linen room or closet, its companion truck from the previous day being then removed from the station and returned to the central linen room for next day's loading.

Since, to conserve necessary space, the linen closets are built of just sufficient size to accommodate one of these trucks pushed in sideways, four swivel casters are required. The Jarvis & Jarvis Magic-Swivelock device nevertheless permits these trucks to be delivered rapidly and easily down long corridors with the use of one attendant per truck.

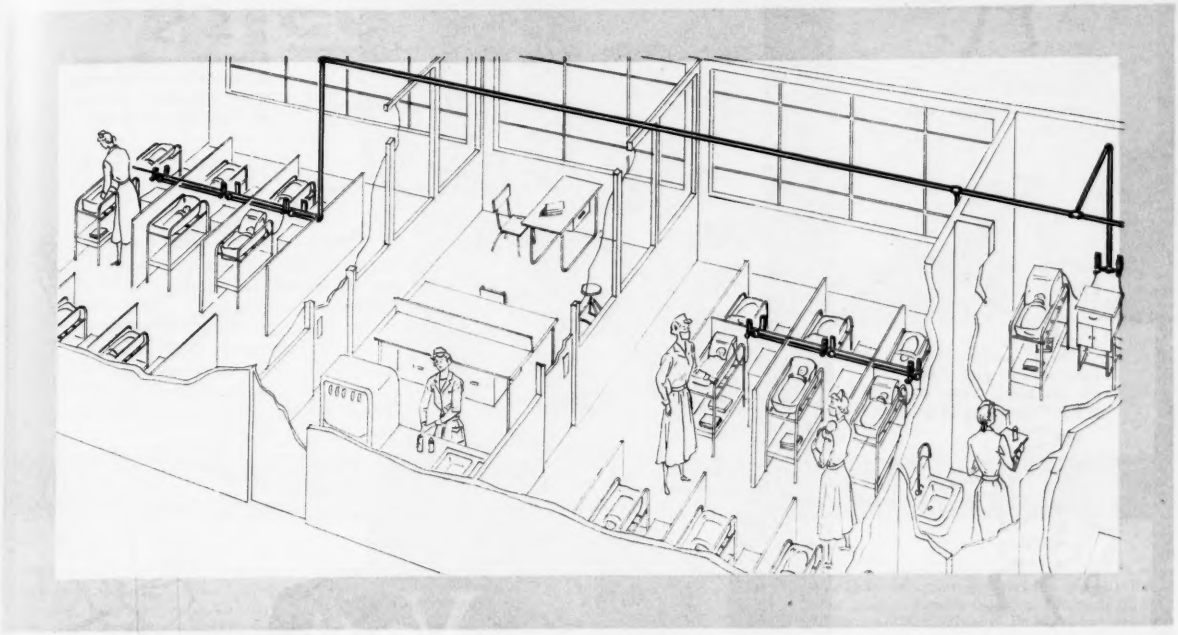
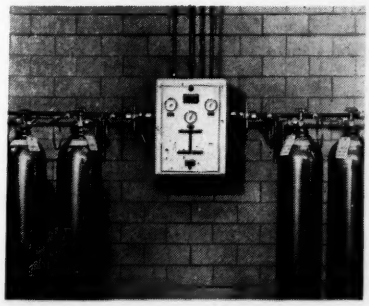
PALMER, MASSACHUSETTS

It may be more feasible than you think to install piped oxygen now in your hospital



As shown here, piping can be installed inconspicuously in existing hospitals. In this corridor pipes run along top of each wall—at juncture of wall and ceiling.



The new NCG "Even-Flow" automatic oxygen control unit is typical of the advanced engineering that NCG has applied to its complete line of oxygen equipment and apparatus for hospitals.

A survey by NCG engineers will give you facts and figures without cost or obligation

Many a hospital administrator has been agreeably surprised when a survey by NCG has shown how simply and economically an oxygen piping system can be installed in his hospital.

Why not get the facts about an oxygen piping system for *your* hospital? You can do it so easily. NCG will be glad to make a survey for you and give recommendations, plans and an estimate of costs—without expense or obligation to you.

You may be particularly interested in NCG's "progressive piping plan"—by which piping can be installed initially in one area, such as a nursery, and then extended step by step to other areas, as funds permit, until the hospital is completely piped.

Write NCG today and a representative will call to discuss an oxygen piping survey in your hospital.

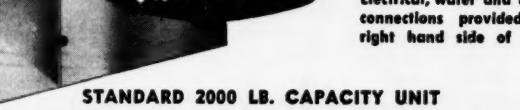
Here's inside information on the finest Ice making unit ever made

STANDARD 2000 LB. CAPACITY UNIT



CYLINDER TUBE-ICE CRUSHED TUBE-ICE

OPERATION OF THE MACHINE

1. Single toggle switch controls starting and stopping of unit. Ice discharges through base of freezer to patented ice sizing cutter.
2. A three-position selector switch provides automatic control of ice making unit to produce and store cylinder and crushed Tube-Ice consecutively (requiring two ice bin thermostats) or either type of ice exclusively.
3. Automatic blowdown in water pan maintains freshness and aids in reduction of concentrated solids.
4. An upper "scoop out" for small quantities of ice and a lower "shovel out" door are provided in storage bin.
5. Minimum of 3" Fiberglass insulation between storage bin walls. Bin has removable partition if but one type of ice is desired.
6. Copper or brass tubes used for freezer, condenser and refrigerant piping.
7. Tube-Ice Units are completely self-contained and conform to A.S.M.E. Code. Require only the addition of the refrigerant charge, and water and electrical connections.

ANTISEPTIC LIQUID SURGICAL SOAP

Germa-Medica®

WITH HEXACHLOROPHENE

Reduces bacteria... Shortens scrub-up

ACCEPTED COUNCIL ON PHARMACY AND CHEMISTRY AMERICAN MEDICAL ASSOCIATION

This unique Liquid Surgical Soap has earned its place in America's finest hospitals because it does a thorough job of preparing the surgeon's hands and the patient's skin for surgery. It reduces the time required for both techniques.

Surgeons and nurses prefer Germa-Medica with Hexachlorophene for their hands because it leaves the skin soft and feeling really clean.

EFFECTIVE IN 3:1 DILUTION

Germa-Medica with Hexachlorophene contains 2.5% hexachlorophene on the anhydrous soap basis, 1.0% total weight basis.

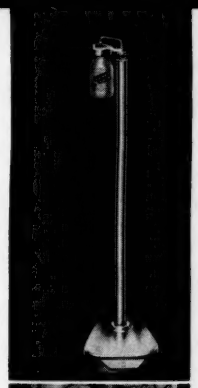
HUNTINGTON SURGICAL SOAPS, SANITATION SUPPLIES AND DISPENSERS

THE HUNTINGTON PORTABLE FOOT PEDAL DISPENSER is economical, trouble-free. Positive action. Won't clog. Easy to clean. All metal in contact with soap is non-corrosive, stainless steel. Single or twin types. Leased without charge to quantity users of our soaps.

OTHER HUNTINGTON SOAP DISPENSERS. A complete line of dispensers . . . all aseptically correct for hospital use . . . includes new plastic bottles, liquid or lather pump-type, pneumatic wall-type and gravity-feed systems.

INSTRU-SAN INSTRUMENT CLEANER is a time-saver for nurses. Simplifies instrument clean-up. Dissolves dried blood plasma, serum and other incrustations without scrubbing. Will not leave a film. Safe for use on glass, metal, rubber and plastics. Won't corrode instruments or dull edges.

FORMA-SAN INSTRUMENT GERMICIDE with Hexachlorophene is a powerful chemical solution for the thorough disinfection of instruments. Tested and proved effective against tubercle bacilli, spore formers and pathogens. Safe for use on rubber, metal, plastics, glass. Won't dull edges.



CABINET-SAN DEODORANT* in aerosol cans is a highly concentrated, easy to use deodorant which quickly removes obnoxious odors when sprayed in rooms, corridors, cabinets and on fabrics. Will not stain. Inexpensive, easy to use or store. Also available in wick-type dispensers or plastic atomizer bottles.

HUNTINGTON SELF-POLISHING WAXES are made with the best carnauba wax under strict laboratory control. All are heavy duty waxes and listed by U.L. Cosmolite Anti-Slip Wax includes amazing new colloidal silica. Weatherall has great resistance to water. Neo-Shine is concentrated to give longest wear. Conductive Wax to eliminate danger of static sparks is also available. We will gladly develop special waxes.

*Registered, Huntington Laboratories, Inc.

SAN-PHENO-X* has a phenol coefficient of 10, yet costs no more than ordinary germicides. Non-irritating to animate and inanimate objects. Pleasant odor. Readily soluble in water. Stable. Kills Mycobacterium Tuberculosis germs. Very low cost in use.

HEXACHLOROPHENE BABY-SAN LIQUID SOAP* helps prevent infections. Soothes baby's skin as it keeps the bacteria count low. Liquid castile made from imported olive oil. Also available without hexachlorophene. Huntington Baby Oil is soothing and aseptic.

FLOOR-SAN UNIVERSAL CLEANER* contains soap, detergent and emulsifier . . . works on any type of dirt! Suds in any water. May be used on any surface that's unharmed by water. Excellent for green soap stock-solution.

SPAL CONCENTRATE* is a powerful liquid detergent. Useful as an all-purpose cleaning compound . . . for walls, woodwork, floors and as a green soap stock-solution. Dissolves oily dirt, eliminates rinsing, makes cleaning easier. Suds quickly in any water . . . hard, soft, hot or cold.

KOREX GERMICIDAL CLEANER* is a general purpose, antiseptic cleaning compound. It contains fine soap, detergent and a new type of germicide. Phenol coefficient, 2. Kills communicable disease germs. Cleans, disinfects, deodorizes in one operation. Eliminates need for special cleaners.

BUG-BLAST INSECTICIDE in aerosol cans is sure death to moths, flies, fleas, mosquitoes, roaches and other flying and crawling insects. Dee-Rez, "Nic" Odorless, Done Died and Sol-U-Dee are effective in eliminating insects. Huntington Roach Spray and Nip-An-Tuck Roach Powder will put an end to the roach problem.

SILENT HUNTINGTON FLOOR MACHINES are made in three types. 16-inch brush size. Special quiet belt-driven model for hospital use. Will sand, scrub, steel wool and buff. Guaranteed.

SILENT HUNTINGTON VACUUM CLEANER is quiet, efficient, portable. For wet and dry pick up.

WILLIAMS

50 YEARS OF SERVICE

Cleaning Outside of Top Sash

REVERSIBLE WINDOW PROVIDES

1. **SAFETY**—All cleaning and reglazing done from the inside
2. **CLEANING**—40 to 50% less time with less expensive labor, returning your investment in three to five years
3. **VENTILATION**—Overhead in all kinds of weather
4. **REPLACING GLASS**—All reglazing done from inside without removing sash
5. **WEATHERTIGHT**—Can be completely weatherstripped like any ordinary window
6. **EASY OPERATION**—Windows slide on spring rollers which compensate for shrinking and swelling
7. **NON-RATTLING**—Rollers keep constant jamb to jamb contact

• Williams Reversible Windows can be turned so that the outside of the sash can be cleaned from inside of the building at floor level. This is what makes the Williams Window so popular. Plus the safety advantage, you will save forty to sixty per cent window cleaning time, with less expensive labor in keeping your windows clean. Female help can do this work. Another important feature is the overhead ventilation of the room, possible with the Williams Window.

Some Catholic Hospitals which are enjoying the above advantages. This is only a partial list of our many hospital installations. We now have on our books nearly 100 hospital contracts.

SHAMPAINE

Hospital Casework Keeps Things Running Smoothly

CUSTOM-BUILT casework by Shampaine assures continued and complete satisfaction because it is individually designed and manufactured to meet exacting plans and specifications.

Here is perfect fit, smooth operation and the gleaming, aseptic finish for which Shampaine has been noted for over a quarter century. Any combination of stainless steel or enameled steel may be obtained.

Our planning service department will gladly work with you and your architect in the development of special equipment to meet your needs. Your dealer will be glad to obtain this service for you.

SHAMPAINE CO. SAINT LOUIS MISSOURI

The Hausted Manufacturing Company Announces a New Sales Policy

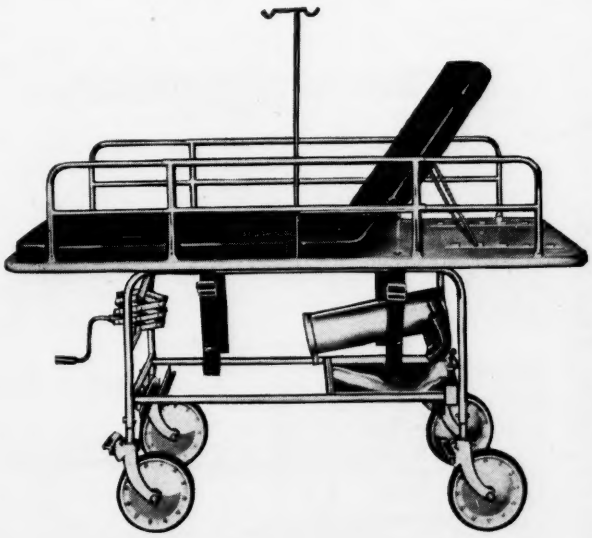
As a business grows, its methods of doing business must grow with it. We have reached a point in our own growth where we are making a change in our sales program that, we are convinced, will enable us to serve our customers better. We have decided, therefore, to adopt a policy of *direct factory to hospital selling.*

Our main interest in adopting this *direct-selling* sales policy is to give every hospital the maximum in service at a minimum in price.

The Hausted line of Wheel Stretchers have become the quality line in their field — ranging from the regular Standard Stretcher to the Multi-purpose O.B. and Examining Table and the One-Way and Two-Way Slide and Tilt Easy-Lifts. In addition to our high quality in materials and manufacturing methods we are vitally interested in the high quality of use that hospitals receive from our stretchers.

We have found that we can maintain these high standards of quality better and even add to them when we are in *direct contact* with our hospital customers. Therefore, *we will now sell and service our customers directly from our factory.* We know that this will result in real advantages to the hospitals now using our equipment and to the hospitals who will join these hundreds of others that have increased their wheel stretcher efficiency through the use of the Hausted equipment.

We urge you to contact us direct at our Medina, Ohio main office in regard to future purchases of the Hausted wheel stretchers. We can promise increased service and increased satisfaction through direct contact with our factory-trained sales personnel whose manufacturing know-how will result in maximum efficiency in your wheel stretcher use.



Compare and You'll Agree That Hausted Stretchers Give Maximum Efficiency

The entire Hausted line of multi-purpose stretchers are designed to give better patient-handling and to decrease personnel costs. One nurse does the job of many when you use Hausted stretchers. We invite your inquiries about the Standard Stretcher, O.B. and Examining Table, and Easy Lift Stretcher.

POSEY PATIENT SUPPORT

Patent Pending

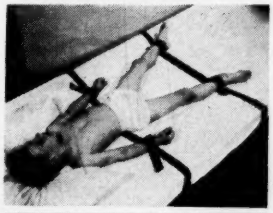
The Posey Patient Support was designed to fill a long-felt need. It is used on wheelchairs or conventional chairs. It is possible to get a bed-patient up into a chair with safety and with no fear of danger. Generously designed to accommodate practically all size patients and all types of chairs. Available in small, medium and large sizes in two models. Standard Model, Cat. No. PP-753, $5.85 each. Adjustable shoulder strap model, Cat. No. PP-154, $7.50 each.

THE POSEY SAFETY BELT

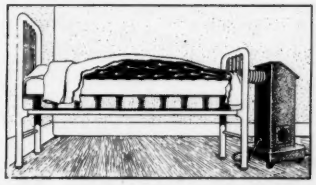
U. S. Patent No. 2,333,346

Prevents patients falling out of bed. Maximum freedom with safe restraint. Causes no mental fear or physical discomfort. Better than side boards, the Posey Safety Belt is so designed that it is under the patient and out of the way. Sizes: Small, Medium, Large. Cat. No. S-141, Price $6.00 each. Available extra heavy, riveted construction with key-lock buckles, Cat. No. P-453, $18.50 each.

POSEY WRIST OR ANKLE RESTRAINT



A friendly restraint designed for use on adults, children and babies. It allows some freedom of movement, causes little mental or physical discomfort, yet prevents falling or getting out of bed. Made in large, medium, small and infant sizes. Cat. No. P-450, Price $5.25 per pair, $10.50, per set. Posey Wrist or Ankle Restraint equipped with sponge rubber padding, add $.75 per pair.



The SWEETLAND BED WARMER and CAST DRIER

U. S. Patent No. 2,122,964

For treating patients by continuous flow of thermostatically controlled warm air. Warms bed for post-operative care in from 7 to 10 minutes. Warmer, when used with cast drying mats, will dry plaster casts in less than one-half time usually required. Ideal in treatment of burn cases. Bed Warmer price $295.00. Accessories: Adult Body Cast Drying Mat $37.50; Adult Leg Cast Drying Mat $27.50; Child Body Cast Drying Mat $35.00; Child Leg Cast Drying Mat $25.00.

POSEY BED CRADLE

Full width of bed. Simple, self-locking clamp to mattress holds Cradle in place. Leaves patient accessible. Light hooks on body size Cradle. Available in body or leg sizes. Price $6.75 each.

McDONALD RESTRAINT

A strong friendly restraint designed to prevent patients from getting or falling out of bed. Sizes: Small, Medium, Large. Cat. No. P-4147, Price $5.75 each. Available extra heavy riveted construction with key-lock buckles, Cat. No. P-353, Price $18.75 each.

Prices and specifications subject to change without notice. F.O.B. California.

"LESS WORK - EXCELLENT RESULTS - ACCURATE CONTROL with LILY cups" says M. ETHEL BROWN Chief Dietician New York Polyclinic Hospital

NEW YORK POLYCLINIC
MEDICAL SCHOOL AND HOSPITAL
341-353 WEST FIFTIETH STREET
NEW YORK 19, N.Y.
ORGANIZED 1881

June 2, 1953

OFFICE OF
A. A. JALLER
EXECUTIVE DIRECTOR

Lily-Tulip Cup Corporation
122 East 42nd Street
New York, New York

Gentlemen:

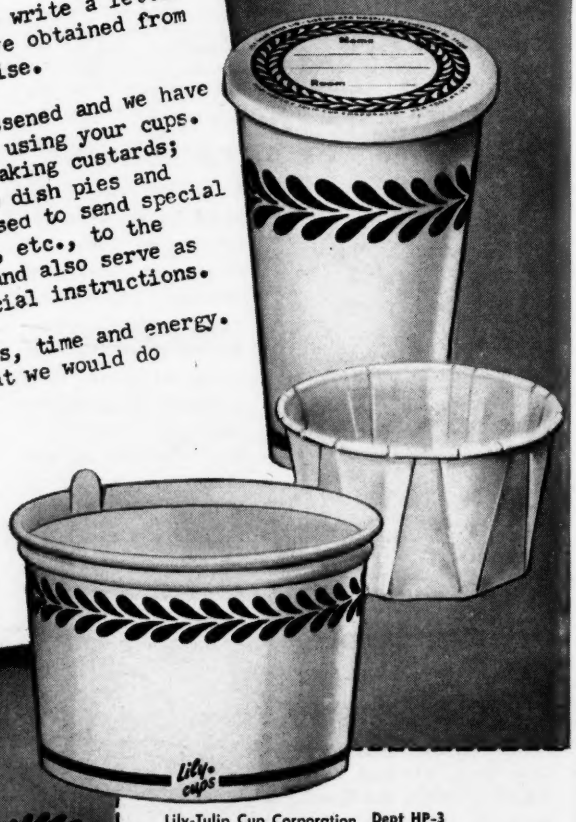
It is seldom that we can take time to write a letter such as this, but the excellent results we have obtained from using Lily Cups warrants an expression of praise.

Our work in the kitchen has been lessened and we have been able to get accurate portion control by using your cups. The 4 oz. cups we find very convenient for baking custards; also the 8 oz. are excellent for baking deep dish pies and casseroles. Your containers with lids are used to send special orders such as cottage cheese, fruit salads, etc., to the floor kitchens. The lids protect the food and also serve as handy markers for the patients name or special instructions.

They have saved us countless steps, time and energy. I can truthfully say I just don't know what we would do without them.

Very truly yours
M. Ethel Brown
M. Ethel Brown
Chief Dietitian
Polyclinic Hospital

Staff and patient feeding at the world famous New York Polyclinic Medical School and Hospital is a vital, difficult job that must be done quickly . . . efficiently . . . economically. Chief Dietician M. Ethel Brown tells why Lily® Cups and Containers make the job easier:



Could Lily do as much for your hospital? You can find out — without obligation — by simply filling in the coupon. We'll send full information and sample "Food Service" kit at once.

GOMCO®

PERFORMANCE—PROVED HOSPITAL EQUIPMENT

GOMCO EQUIPMENT

Explosion-Proof CABINET SUCTION-ETHER AND SUCTION UNITS

GOMCO No. 927 SUCTION-ETHER UNIT

For surgeries where the finest possible facilities for suction and anesthesia are desired, the choice is the beautiful No. 927, shown here. Its precision Gomco double pump provides the large reserve of capacity so desirable in busy hospitals. Suction and ether pressure are easily regulated to an exact degree. Gleaming chrome-plated brass fittings and all-steel baked enamel cabinet make for easy cleaning and long life. Large, noiseless rubber-tired casters and projecting rubber bumper. A unit quality-built through and through for a lifetime of absolute dependability and time-saving convenience.

GOMCO No. 928 SUCTION-ETHER UNIT

This unit has the same superb features as the 927 described above, with the exception of single pump construction. Near-silent performance, freedom from troubles, attractive appearance and ease of operation make these units among the most appreciated in hospitals throughout the world.

AEROVENT OVERFLOW PROTECTION,

an exclusive Gomco-developed valve, automatically prevents overfilling a suction bottle and damaging a pump of any unit described on this page.

All units on this page listed by Underwriters' Laboratories, Inc. and Canadian Standards Association for use in hazardous locations, Class 1, Group C.

GOMCO No. 929 SUCTION UNIT

Here is maximum-capacity, precision-regulated suction for the heaviest year-in, year-out demands in surgery and treatment room ! The 929 double-pump Suction Unit, you will note, has the same exterior beauty and convenience features as the 927 illustrated above. It also gives you the same sure overflow protection and explosion safety.

GOMCO No. 930 SUCTION UNIT

The 930 is another extremely valuable unit for any part of the hospital where suction treatment is required. Its single pump is typical of Gomco quality workmanship—assuring you permanently satisfying service. Its handsome cabinet and long-life fixtures are identical to those of the popular 929, illustrated.

All prices on request. Ask your dealer, or write:

GOMCO®

PERFORMANCE—PROVED HOSPITAL EQUIPMENT

A NEW GOMCO UNIT TO AID THE CHEST SURGEON

GOMCO No. 766 THERMOTIC THORACIC PUMP

A valuable new aid to post-operative treatment in cases of chest surgery, the No. 766 was designed to meet rigid requirements of chest surgeons. This silent and attention-free pump provides constant, very gentle suction for the chest cavity, which not only aids in the immediate re-compression of the lung components, but insures inflation as long as may be necessary. Suction is regulated between the safe limits of 0 to 25 cm. of water, to avoid hemorrhage; yet *volume* of suction is high enough to handle most cases of leakage.

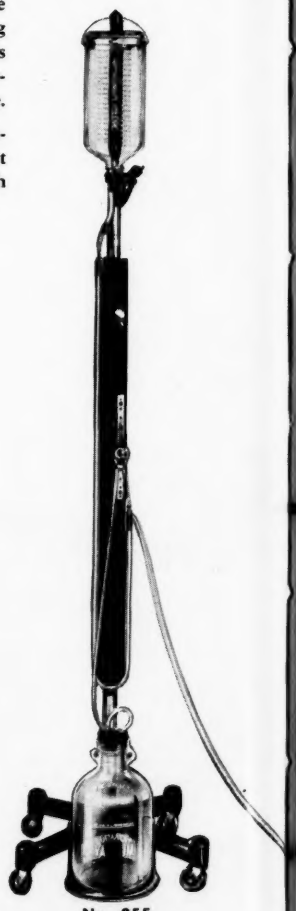
The 766 operates on the same principle as the long-accepted Gomco Thermotic Drainage Pumps (see page 3), except for a timing device to smooth out the suction for this specialized application. Here is a unit you can use with complete confidence !

No. 766
THERMOTIC
THORACIC PUMP
(Approx. 34" High)

For The Cystoscopic Room —

GOMCO No. 855 IMPROVED TIDAL IRRIGATOR AND CYSTOMETER

Designed for the urologist and neurosurgeon, the 855 performs a completely automatic and safe cycle of irrigation and drainage. The Doctor simply sets the Tidal Irrigator at the patient's symphysis pubis level, determines the bladder emptying pressure and sets the rate of flow of the irrigating liquid. The nurse has only to fill the reservoir and empty the receptacle. The Tidal Irrigator does the rest, by noiseless, positive gravity and siphon action. A complete, compact unit that is easy to set up, easy to operate and easy to clean.



No. 855
TIDAL
IRRIGATOR
(Approx. 72" High)

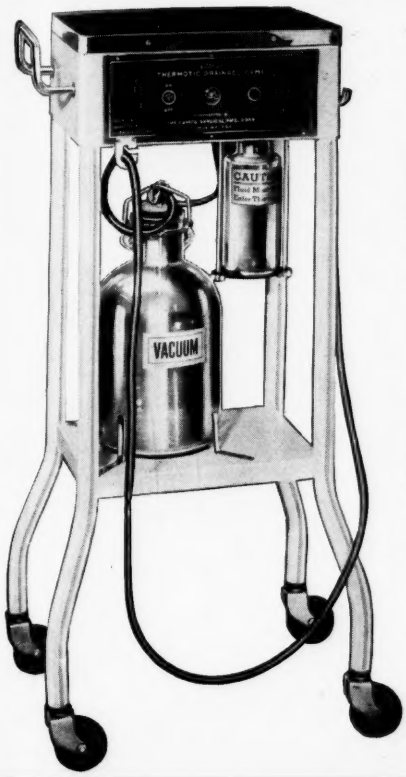
GOMCO®

PERFORMANCE—PROVED HOSPITAL EQUIPMENT

GOMCO EQUIPMENT

FOR MILD, AUTOMATIC POST-OPERATIVE SUCTION



GOMCO

THERMOTIC DRAINAGE PUMPS

Intermittent, Continuous Suction For:

- duodenal drainage
- gastric lavage
- fistula drainage
- abdominal decompression
- drainage following prostatectomy
- all continuous, mild drainage

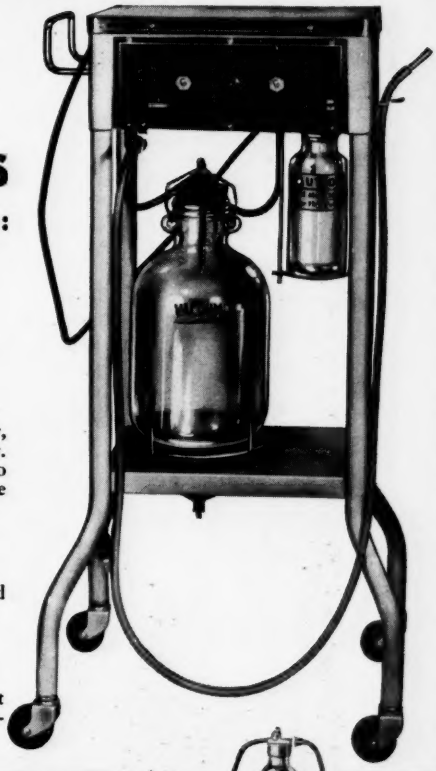
Suction is preset at 90 or 120 mm. of mercury, and will continue at that degree indefinitely. Pump is noiseless, non-mechanical and needs no attention. The gentle suction is ideal where delicate tissues must be protected.

No. 765 THERMOTIC DRAINAGE PUMP, (Shown on Left)

with all tubing, gallon suction bottle and overflow trap bottle as shown.

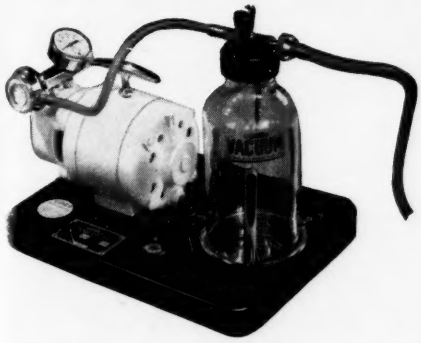
No. 765-A THERMOTIC DRAINAGE PUMP, (Shown on Right)

with all features of the 765 plus Aerovent Overflow Valve providing automatic overflow protection.



STRONG, CONTROLLED SUCTION

For Polio, Urological, Throat Cases, Dental Aspiration

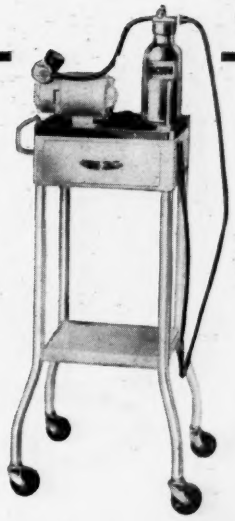


GOMCO No. 789 Portable ELECTRIC ASPIRATOR

Weighing only 18 pounds, this sturdy little aspirator gives instant, controlled suction from 0" to 20" of mercury whenever and wherever needed. Takes less than a square foot of table space.

GOMCO No. 790 Stand Mounted ASPIRATOR

Quality-built and dependable in the Gomco tradition, the 790 is extremely mobile on its non-tipping stand —ready to give 0" to 20" of suction in O.B., Polio Wards, Treatment Rooms or other needed places in your hospital. No institution should be without these time-tested units.



For prices and further details, call your Gomco dealer or write:

GOMCO SURGICAL MANUFACTURING CORP. • 838-H E. Ferry St., Buffalo 11, N. Y.

GOMCO®

PERFORMANCE—PROVED HOSPITAL EQUIPMENT

GOMCO EQUIPMENT

Explosion-Proof SUCTION and SUCTION-ETHER UNITS

For The Hospital, Office or Clinic

GOMCO No. 900 Stand-Mounted Suction and Ether Unit

This provides all the smoothly controlled suction and anesthesia facilities of more expensive cabinet models, and has the same powerful, whisper-quiet Gomco motor-and-pump unit. Explosion-proof and protected against suction overflow by the Gomco Safety Overflow Valve, the 900 is both safe and trouble-free for operating and treatment room use, year after year.

GOMCO No. 910 Explosion-Proof Portable Suction And Ether Unit

Here are complete anesthesia and suction facilities in a "package" taking little more than a square foot of table space! Widely used as an auxiliary floor unit in large hospitals for treatment such as spraying merthiolate and in conjunction with surgery; very popular with smaller hospitals as an all-around anesthesia and treatment unit.

GOMCO No. 901 Stand-Mounted Suction Unit

(not shown)

Equipped with the same mobile, non-tipping stand and lifetime Gomco rotary pump as the 900, shown at left, but with suction facilities only, this explosion-proof unit is equally popular with institutions where budget dictates a lower first cost. The Gomco Safety Overflow Valve prevents a flooded pump, should the gallon suction bottle become over-filled.

All units on this page listed by Underwriters' Laboratories, Inc. and Canadian Standards Association for use in hazardous locations, Class 1, Group C.

GOMCO No. 911 Explosion-Proof Portable Suction Unit

An ideally safe, compact unit for floor use wherever suction is required. Its powerful rotary pump can be counted on for instant service at any time. Operator has pinpoint control of suction, from 0" to 25" of mercury, by means of the convenient Gomco Regulator Valve and Precision Gauge. A sturdy, carefully built unit for many, many years of the heaviest duty.

EMERGENCY ELECTRICITY
for ALL ESSENTIAL
HOSPITAL SERVICES

5 and 10 K.W., A.C. 4 cylinder, water-cooled standard low-cost models

10 K.W. to 50 K.W. A.C. Fully housed models, 4 and 6-cylinder water-cooled engines

Here's full protection against failures of electric power . . . for hospitals large and small. Onan Standby Electric Plants assure lighting in corridors, wards, operating rooms and other locations, provide power for heating system, ventilators, elevators, X-ray machines, oxygen tents, and other vital machines operated by electricity.

With an Onan Emergency Standby Electric Plant, your hospital will have electric power at all times, for all essential requirements, safeguarding patients and personnel. These quick-starting dependable engine-generators, equipped with line transfer controls, automatically take over the electrical load *within seconds* after a mainline failure . . . . automatically stop when regular power is restored.

Onan Standby Plants are available in a range of sizes from 1,000 to 50,000 watts A.C. in all standard voltages. All models can be equipped to operate on gasoline or natural gas. Onan units meet the requirements of State Industrial Boards.

For reliable, low-cost standby protection, start plans for your Onan Standby installation today. Simply send details concerning your emergency electric power requirements to us, or write for hospital survey form No. SP2-1, and our experienced engineers will make recommendations promptly for your hospital, without cost or obligation.

A complete line of Onan Diesel Electric Plants ranging in size from 3,000 to 55,000 watts A.C. in standard voltages can also be supplied. Write for folder and detailed description.

FURNISHING • INTERIOR PLANNING COLOR & DECORATION FOR HOSPITALS

It is the function of this organization to plan harmoniously the patient and public areas of the hospital in relation to the furniture, furnishings, color and general decorative scheme; to work with the architect toward a pleasing and coordinated interior; to counsel with the administrator or governing board in these matters; to contract for and to supervise the entire furnishing and decorative job and to select from all available products those which best suit the individuality of the hospital. The fee for these services is ordinarily more than offset by price differentials allowed the contractor and the net cost is therefore less than the price the hospital would pay by independent purchasing. Although entirely optional, Hospital Furniture, Inc., can make available an exclusive furniture grouping of its own design, made by the leading contract manufacturer. We will be pleased to describe this service more fully upon request.

ARMSTRONG
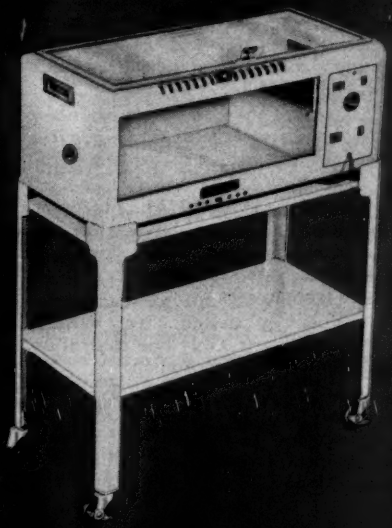
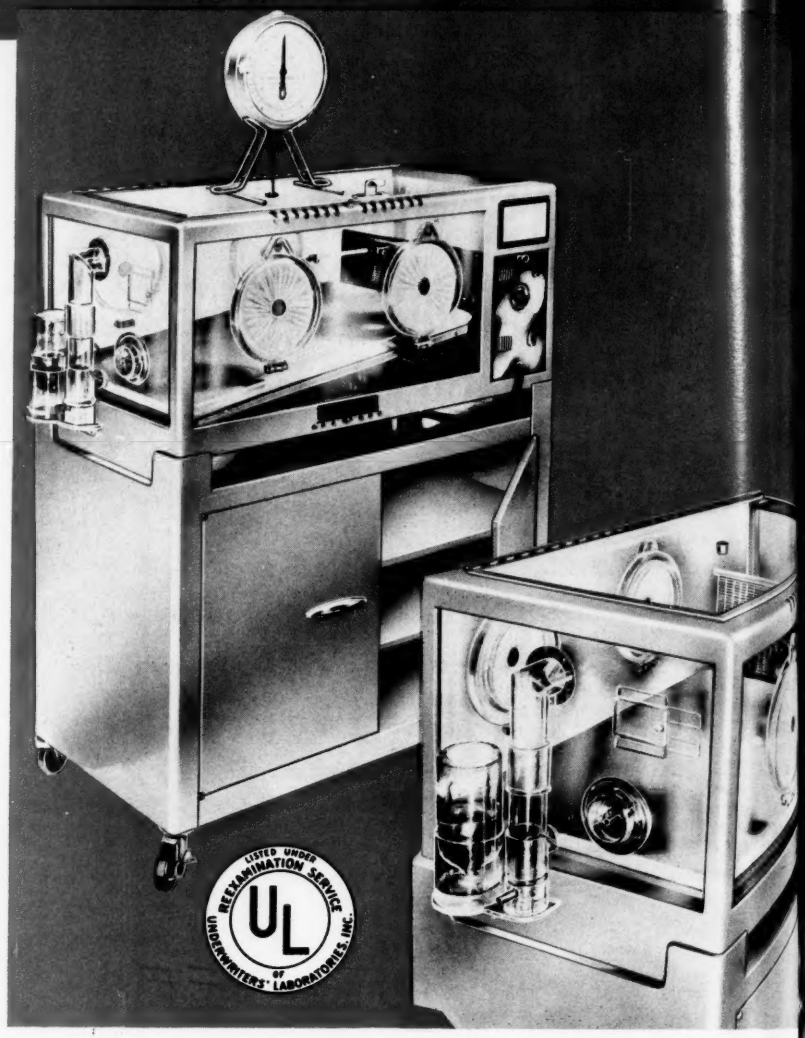
X-4
(Nursery-Type)
INCUBATOR



ight 1 3 The Gordon Armstrong Company, Inc. Printed in U. S. A.

Armstrong DeLuxe H-H Baby Incubator

(Hand-Hole Type) Mark III



1. Designed for the care of critical cases where more constant temperatures, more constant oxygen concentrations and high humidity or supersaturated atmospheres are important.

2. Sound in design. Based on over 20,000 Incubators' worth of experience and examined and reviewed before being placed in production by over 300 pediatricians and nursery supervisors.

3. Either HIGH or LOW Oxygen concentrations — as indicated.

4. Low in price following the Armstrong standards of simplicity of design. Produced in quantities to sell at a low price.

5. 4 Ports or Hand-Holes — 2 in front and 2 in back. Each equipped with a soft plastic guard or sleeve which automatically, and without mechanical controls, adjusts comfortably to the hand or arm.

6. Clear vision from all four sides and the top. The four sides are heavy ¼″ thick, transparent Plexiglas. The top is ¼″ thick 3-ply safety glass. All set in a rigid steel frame for strength.

7. New, self-purging, Nebulizer. Designed to provide supersaturated atmospheres with high oxygen concentrations and medication or liquid detergents, such as Alevaire. Atomizer can be cleaned, or purged, while in use, in five to ten seconds. Something new. Nebulizer may be used with or without heat.

8. A BIG Incubator — with a tilting bed and a 1″ Foam Rubber mattress — big enough for a 25″ or 26″ baby.

9. Emergency opening. Entire Top Lid of Incubator can be opened instantly and safely. May be opened with one hand, regardless of the tilting bed position.

10. Free service. The "heart" of the Incubator, the heating unit, is guaranteed service free for three years. Heating Units are standardized and interchangeable.

11. Source of heat is in a stainless steel tube, (same as used on an electric range) and this is then sealed in a stainless steel jacket.

12. The Armstrong H-H Incubator is mounted on a completely-enclosed 4-compartment mobile Cabinet. Four soft-rubber tread casters with foot brakes on the two front casters.

13. Simple in design. No motors; few moving parts. Only one control on the automatic Thermoswitch.

14. Finish. Steel parts of the Incubator are made of Galvannealed Steel — a tight-coated galvanized steel to protect against corrosion. Over this are two coats of baked silver lustre enamel and over the silver lustre enamel one coat of tough transparent baked-on lacquer — a beautiful finish and a tough finish.

15. Parenteral Fluid or Tube Feeding Slide. Slide opens and closes around one, two, or three tubes — or closes tight when not in use.

16. Oxygen Inlet. Rotating directional flow, inside cap. This inlet provides oxygen with or without the Nebulizer or may be used either with or without heat. Inside cap may be removed, exposing a nipple to which a tube and funnel may be attached where this technique is used. Inlet and the Nebulizer give complete flexibility for oxygen therapy.

17. Oxygen Tent. The independent oxygen inlet may be used with or without heat. It may be used with or without the Nebulizer. The Nebulizer may be used with or without heat. This combination provides an efficient Oxygen Tent for infants up to 25″ or 26″ without the cost or space requirements of extra equipment. It is all included in the one low price.

18. Low Price includes (1) the Big H-H Incubator, (2) 4-compartment mobile Cabinet, (3) self-purging Nebulizer, (4) normal humidity reservoir, (5) parenteral fluid slide, (6) directional flow oxygen inlet, (7) metal shielded F & C Thermometer, (8) adjustable tilting Bed, (9) 1″ Foam Rubber mattress, (10) emergency Top Lid of ¼″ 3-ply safety glass, (11) ¼″ clear Plexiglas ends and sides, (12) four simple Plexiglas covered hand-holes with Vinyl plastic sleeves, (13) four extra Vinyl plastic hand-hole sleeves, (14) two preshrunk, white bleached duck hammocks for weighing baby inside of Incubator.

19. The scales are available as an accessory because you may already have scales of this type and because one scale will serve for many Incubators.

Armstrong X-P *Explosion-Proof* Baby Incubator

For use in DELIVERY ROOM or SURGERY

● The basic principles involved in the Armstrong X-P (EXPLOSION-PROOF) Baby Incubator have been developed and tested by many years of actual hospital use. The Armstrong X-4 Baby Incubator was the first baby incubator ever to be tested and approved by Underwriters' Laboratories, Inc. The Armstrong X-P (EXPLOSION-PROOF) Baby Incubator is the first (EXPLOSION-PROOF) Baby Incubator ever to be produced and is the first to be tested and approved by Underwriters' Laboratories, Inc.

Bright RED SPOTS are the Mark of EXPLOSION-PROOF SAFETY

Every Armstrong X-P (EXPLOSION-PROOF) Baby Incubator is enameled silver-gray and has a bright red panel at the right front. Across the top front, directly under the Top Ventilator, is a bright red line (trade mark) 9" long by 5/8" wide. For safety's sake, by simply looking into the room, supervision can be sure when seeing a silver-gray Incubator with these two spots of bright red that an (EXPLOSION-PROOF) Baby Incubator is being used. These colors provide a quick check for safety.

EXPLOSION-PROOF HEATING UNIT

The Armstrong X-P (EXPLOSION-PROOF) Baby Incubator is equipped with a new type Heating Unit designed specifically for this incubator. The heating element is sealed into a seamless metal alloy tube. The heating element does not need to be changed and will last indefinitely, the same as the heating coils on the better electric ranges. This heating element, and the Thermoswitch, electrical wiring, control dial and pilot lights are then sealed into a heavy (EXPLOSION-PROOF) cast metal shell.

These new heating units are interchangeable. Should service ever be required, four bolts are easily removed, permitting the entire Heating Unit to slide out and a new one to be installed. Any maintenance engineer can make the change in five or ten minutes, and the Incubator is as good as new. (See section below on "Free Service".)

SAFE HEAT

Heat passes into the incubator by radiation—the heat from the heating element passes through the metal walls of the heating unit into the Incubator air and, at the same time, picks up the proper humidity. It then moves gently the length of the Incubator, covering the baby as a blanket. This is a safe, gentle heat covering all exposed parts of the baby and allowing the heat to be picked up by the baby through cutaneous absorption. Truly, it is a safe, gentle heat.

FREE SERVICE

These (EXPLOSION-PROOF) Heating Units are so rugged and dependable that, provided they are not abused or opened, we will service them free for a period of three years. Each Heating Unit is sealed with two copper rivets, stamped with the trade-mark "X-P". If these identifying rivets are intact, showing that the unit has not been tampered with or opened, the free service will apply. The free service does not apply, of course, to pilot lights or the service cord. This 3-year free service applies only to the (EXPLOSION-PROOF) Heating Unit. See complete formal warranty packed in each Incubator.

OPERATING COST

The Model 22 X-P Incubator, when in full operation, consumes about 162 watts. Therefore, the cost of operation will be about the same as burning one 150 watt lamp. The unit is built to operate only on Alternating Current.

MOBILE

The complete X-P (EXPLOSION-PROOF) Incubator and Stand weigh 72 pounds. The Stand has four corner guards to hold the Incubator safely in place and is equipped with four ball-bearing swivel casters with quiet, soft rubber treads. When used in the Delivery Room or Surgery, the complete Incubator and Stand may be easily rolled to the Nursery without handling or removing the baby.

In the Delivery Room, Surgery, or any other hazardous area, use only the X-P (EXPLOSION-PROOF) Incubator—a silver-gray baby incubator with the red line under the top ventilator and the red panel at the right. Look for the red panel and the red line.

Armstrong X-4 Baby *Nursery Type* Incubator

MODEL 500

For use in the HOSPITAL NURSERY

● More than 19,000 in use constitutes assurance of the efficiency and dependability of the Armstrong X-4 Baby Incubator. This Incubator is designed to supply constant, automatically-controlled heat and increased humidity for both premature and full term babies; for the administration of oxygen to either premature or full term babies; as an ambulance for the transportation of babies; for the administration of oxygen at a high humidity; and for the incubation of a full term baby.

SAFE HEAT

All heat is by radiation. Because of protective screens and solid metal shielding, neither the baby nor the nurse can come in contact with the heating element. The heat source is one 150 watt standard Mazda lamp. This lamp is enclosed in a gas-tight metal tube. This heating tube and the complete operating mechanism is then sealed in a housing which makes it a safe heat source for oxygen. No special lamps to buy.

PORTABLE

The complete X-4 Incubator weighs less than 50 pounds. It is only 32″ long, 15″ wide and 13¾″ high. Because of this light weight and compact design it can be picked up and carried anywhere at any time. Large and sturdy enough for day after day hospital use yet small enough to ride on the seat of an automobile beside the driver or nurse.

NIGHT LIGHT

Over the Control Dial there is a small night-light slit that permits a beam of light to fall directly on the Control Dial. The room may be completely dark yet the nurse can read or reset the Control Dial without turning on the room lights.

COST OF OPERATION

All heat and light is furnished by one 150 watt standard Mazda lamp and one small 6 watt pilot light. The cost of operation is low — practically the same as one 150 watt lamp.

ARMSTRONG X-4 STAND

The Armstrong X-4 Stand was designed exactly to fit the X-4 Incubator. It provides a safe, low-cost, easy-rolling table for hospital use. The Incubator rests securely on the top shelf, and the four corner guards hold it securely in place. To use the Incubator as a portable unit, simply lift it off the Stand. The distance from the floor to the top of the Incubator is 42″ — a comfortable working height. The stand is made entirely of steel. All joints and connections are electrically welded. The surface is protected by two coats of baked white enamel. There are four ball-bearing swivel casters with quiet SOFT RUBBER treads. Two of the Casters have foot-controlled brake locks. The legs are smoothly rounded for easy cleaning.

The Armstrong X-4 Baby Incubator, Model 500, is all white and is readily distinguishable from the EXPLOSION-PROOF Incubator.

1,814 hospitals which originally ordered 3,176 X-4 Incubators have since ordered 9,920 more.

Have You Ordered Yours Yet?

THE NEW HERB-MUELLER UNIT

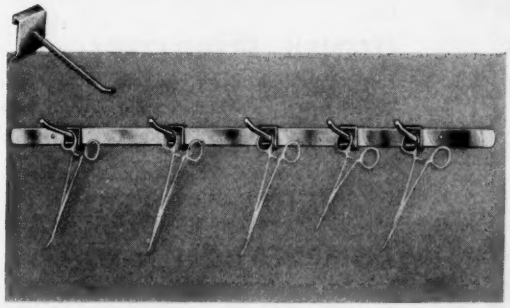
With The Automatic Recirculating Oil System

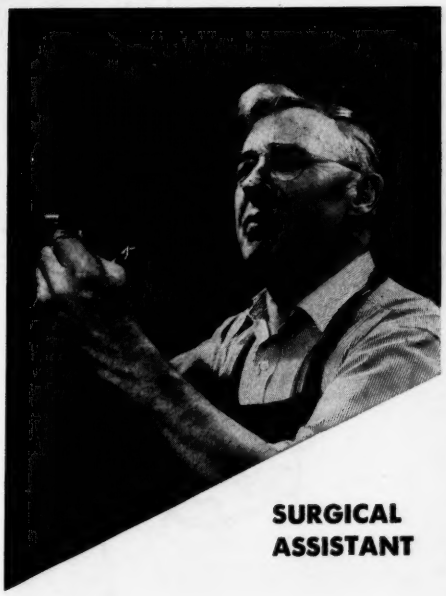
Everything about this new Heavy-Duty Herb-Mueller Ether-Vapor-Vacuum Unit is designed to facilitate proper anesthetization and dependable surgical suction with an absolute minimum of attention and servicing care. Explosion-proof, controlled by a single panel at a handy level, it provides an even, uninterrupted flow of controlled ether vapor, simultaneously maintaining a constant vacuum (to 25 inches Hg.). Special GE explosion-proof motor and integral twin pumps operate at full capacity at comparatively slow speed . . . a long-life unit, vibration-free, cool, quiet . . . so quiet the cabinet doesn't require sound insulating! And, of course, the exclusive new Mueller Recirculating Oil System eliminates usual service problems . . . there's no constant checking, no frequent oiling to remember . . . oil need be changed only two or three times a year, depending on frequency of use. Pumps are kept at top efficiency, and there's no oil drip or spray in cabinet or pressure lines. The Herb-Mueller Unit is fully approved by Underwriters' Laboratories, suitable for use in hospital operating rooms. And still most reasonably priced. Write for complete details today.

Brand New ADJUSTA-RAK

Adapts Itself to Your Instrument Storage Problems

Made To Fit Any of Your Cabinets, Wall Cabinets or Walls





SURGICAL ASSISTANT

Easily mounted in any of your instrument, storage, or wall cabinets—or on any wall—*Adjusta-Rak* is just the thing for handy, time-saving sorting and storage of surgical instruments. A great space-saver, too! Non-Slip *Adjusta-Rak* hangers are simply hooked on—lifted off—spaced as needed—on the rigid steel bar mount. Their complete flexibility of spacing makes *Adjusta-Rak* perfectly adaptable to almost any type of instruments. We'll supply your *Adjusta-Raks* in any lengths you specify, built to fit your needs, at remarkable small cost. Standard equipment includes bar, mounting bolts, washers, nuts, and 3 hangers per foot of length. Extra hangers are available, and inexpensive. Write for complete details today.

This man is responsible for putting into your surgeons' hands dependable instruments for the surgery they do—and *he knows how to do it!* Our seasoned instrument makers know how to fashion fine instruments—know what is needed and expected from an instrument—know how to give it to you, in new instruments or repairs. This is why Mueller instruments are preferred instruments the world around.

The efficiency and compactness of AETNA MODEL PF Water Stills have secured their widespread acceptance by hospitals, laboratories and pharmaceutical manufacturers requiring pyrogen-free distillate of utmost purity for intravenous solutions and plasma work. Models from 1/2-500 gallons per hour. Storage Tanks and Full Automatic Controls. Double and Triple distilling Systems. Purity meters, Conductivity Diverters and Recorders.

PRESSURE STERILIZERS, MONEL CONSTRUCTION:

Jacketed type for continuous sterilization and efficient handling of dry loads. Single Wall Type for the sterilization of solutions, serums, media, and other laboratory work. Ease of operation assured by automatic controls. Exposed and recessed mounted. Recording Thermometers, Loading Cars and Transfer Carriage.

INSTRUMENT STERILIZERS:

Sturdily constructed and designed according to the strictest sanitary codes. Automatic controls regulate rate of boiling and eliminate excessive steam formation.

UTENSIL STERILIZERS:

Dependable sterilizer used in utility rooms. Designed to withstand years of constant use. Lift raises and lowers cover quietly and efficiently.

WATER STERILIZERS:

Provide effective sterilization at desired temperature. Filtering device eliminates impurities prior to sterilization process. Automatic controls assure safe, dependable performance.

COMBINATION MODELS:

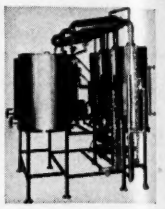
Custom built to satisfy individual hospital and laboratory requirements.

RECTANGULAR STERILIZERS, STEEL AND NICKEL CLAD:

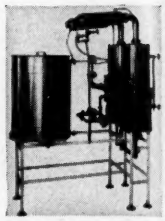
For bulk sterilization of dressings and mattresses, 24" x 36" x 48" and up.

STERILMATIC CONTROL:

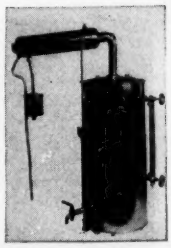
For completely automatic control of sterilizing cycle.



Triple Distilling System.

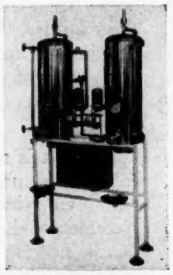


Steam Heated Double Distilling System with Storage Tank.

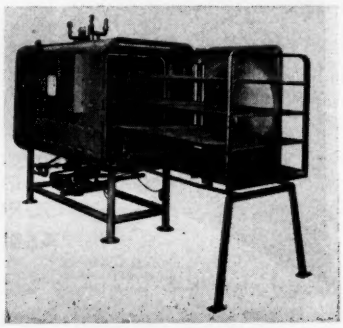


5 Gallon Per Hour Still—Steam Heated.

Utensil Sterilizer.



Electrically Heated Water Sterilizer.



Rectangular Bulk Sterilizer.

Complete Catalog, available upon request, contains comprehensive and detailed specification data covering sterilizers, water stills and hospital equipment. Fully illustrated.

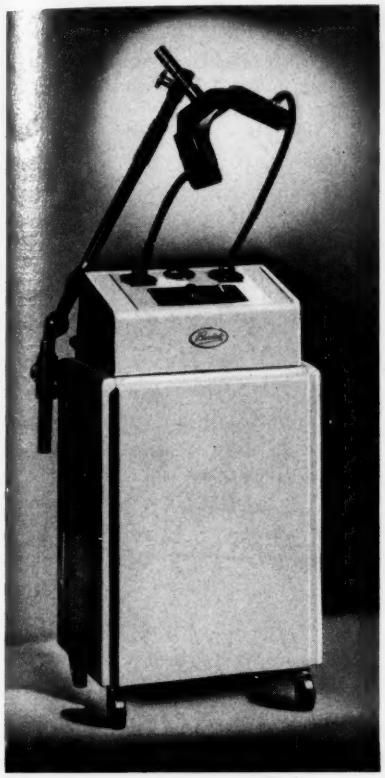
Second & Spring Sts., Everett 49, Mass.

PHYSICAL MEDICINE EQUIPMENT



SHORT WAVE DIATHERMY

Operating on an assigned channel, centered at 27.120 megacycles (11 meter wave length), the MF-49 Universal Diathermy is designed for use with all types of diathermy electrodes; including Contour Applicator (illustrated here), Air - Spaced Electrodes, Induction Cable, and Cuffs as well as for minor electrosurgery.

Frequency remains stable under all operating conditions and produces ample diathermy output with small power consumption. With a minimum of conveniently placed controls, operation is simple. Timer automatically turns off power at the end of treatment.

Cabinet is constructed of highest grade furniture steel, and unit is mounted on large rubber tired casters. Standard finish of ivory and brown. White and walnut special finishes are also available. Storage space for accessories is provided in a rear compartment.

ACCEPTED AND APPROVED:

Effectiveness . . . Accepted by the Council on Physical Medicine and Rehabilitation of the American Medical Association.

Non-Interference . . . Approved by the Federal Communications Commission; harmonic radiations are suppressed well below F.C.C. requirements. Also approved by the Canadian Department of Transport under their Listing No. 33.

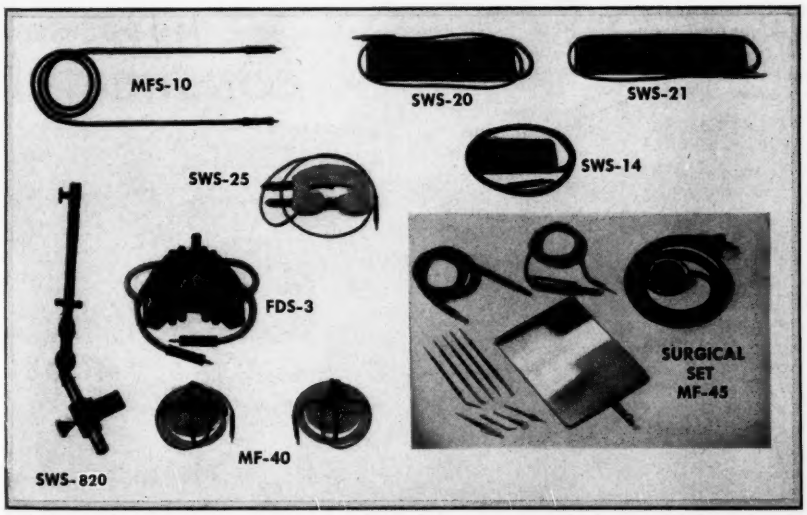
Safety . . . Inspected and listed as approved by the Underwriters' Laboratories, Inc.

F.C.C. Approval D 507

CANADIAN Dept. Transport Listed No. 33

MF-49 DIATHERMY ACCESSORIES

These are accessories which may be used with the Burdick MF-49 Diathermy, illustrated above. A wise selection of these diathermy accessories will increase the usefulness of the equipment.



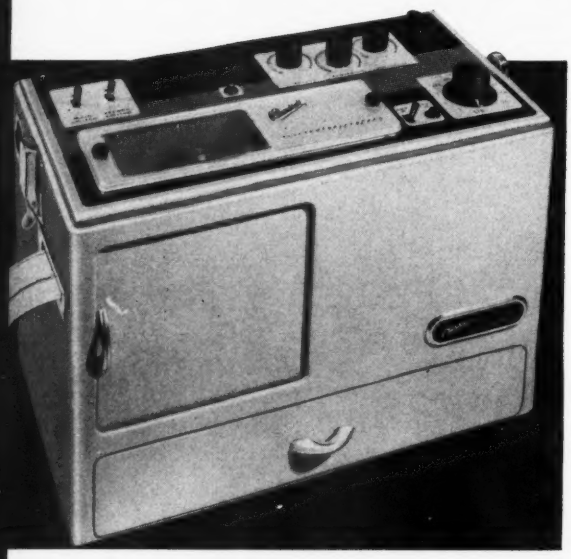
MFS-10	Inductance Cable
SWS-25	Sinus Electrode
SWS-820	Adjustable Arm
FDS-3	Contour Applicator
MF-40	Air-Spaced Electrodes
SWS-14	3x7 Pad Electrode
SWS-20	4x13½ Cuff Electrode
SWS-21	4x16 Cuff Electrode
MF-45	Surgical Accessory Set

Burdick

THE BURDICK CORPORATION

MILTON, WISCONSIN

PHYSICAL MEDICINE EQUIPMENT



ELECTROCARDIOGRAPH

The Burdick EK-2 Direct-Recording Electrocardiograph produces an immediate, accurate and permanent cardiogram. A heated stylus writing directly on heat-sensitive paper eliminates the need for processing or use of chemicals.

Lead Selector switch has eleven positions — including "Standardize", three standard limb leads, chest leads, "V" Wilson lead and Goldberger leads.

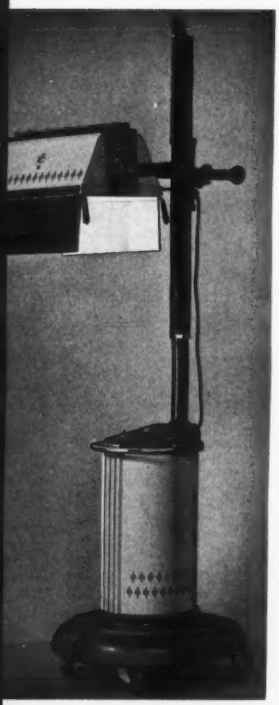
Controls are arranged for utmost convenience; amplifier switch de-activates the stylus when in "off" position; continuous time marker with independent motor; automatic lead marking for first three leads and push button marking for other leads; permanent Weston Cell for calibration; light weight durable aluminum cabinet; roomy drawer for accessories.

Standard accessories include four limb electrodes with straps, one vacuum chest electrode, tube of paste, roll recording paper, patient cable, line cord, and plastic cover.

Choice of ivory, white or walnut finishes.

MODEL EK-2

ULTRAVIOLET



Rich in therapeutic ultraviolet radiation, the "Professional Special" offers quality and convenience to your Physical Medicine Department.

Quality Features

Wide spectrum . . . Radiates the full hot quartz mercury arc spectrum; rich in both bactericidal and antirachitic rays.

Full Length Body Irradiation . . . Provides even distribution of ultraviolet energy over an area approximately 2 x 6 feet.

High Intensity . . . Produces a first degree erythema on the average patient in 30 seconds at a skin distance of 30 inches.

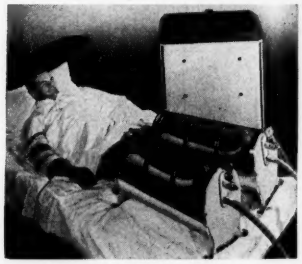
Flexibility . . . Starts automatically, no tilting. Operates in any position. Local or general irradiation. Counter-balanced stand. Ball bearing adjustments both vertically and horizontally.

MODEL QA-450-N

VASCULAR APPARATUS

The SP-1 is designed for application of alternating suction and pressure to the limbs through use of a pressure "boot" in the treatment of peripheral vascular conditions.

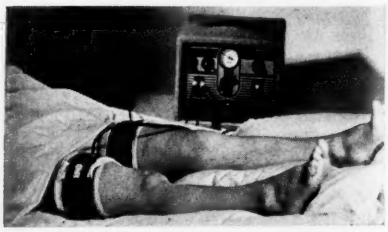
Adaptable to either the Landis-Gibbon or Hermann - Reid technics.



MODEL SP-1

RHYTHMIC CONSTRICTOR

The RC-2 applies intermittent venous occlusion in the treatment of peripheral vascular conditions. Periods of constriction and release are timed separately, permitting any desired combination.



MODEL RC - 2

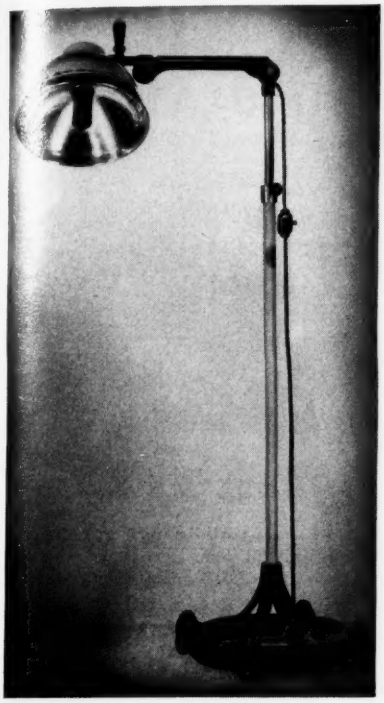
Portable, the unit weighs but 20 pounds complete.

Burdick

THE BURDICK CORPORATION

MILTON, WISCONSIN

PHYSICAL MEDICINE EQUIPMENT



ZOALITE INFRA-RED

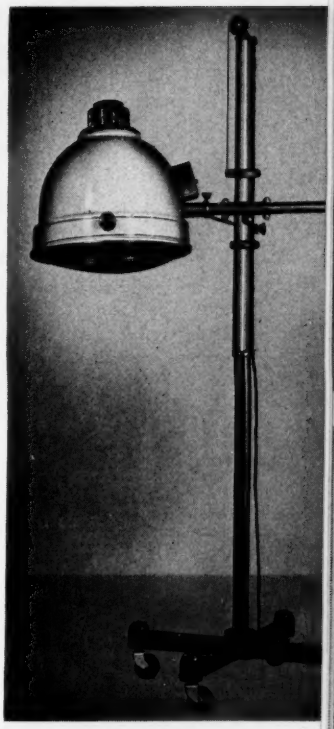
Here are two models of the famous Burdick Zoalite line. To the right is the large Z-30 Model which is the ideal lamp for the Physical Medicine Department. The Z-12 intermediate model is easily portable and well suited for bedside use.

Note These Important Features

Z-30 . . . 1000 watt, non-metallic infra-red element; 16 inch double walled hood with Alzak reflector; ball bearing counter-balanced stand with adjustable arm provides vertical adjustment from 35 to 65 inches and horizontal over a radius of 25 inches; quadlegged base with 3 inch rubber ball-bearing casters. (1000 watt bulb optional in place of element if preferred).

Z-12 . . . 600 watt non-metallic element; 12 inch double walled aluminum reflector; telescoping stand provides vertical adjustment; swivel joint on extension arm permits positioning of lamp at any desired angle; low gravity base with ball-bearing casters.

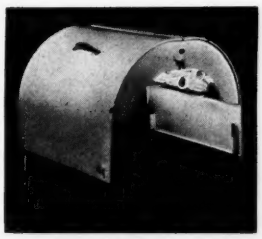
MODEL Z-12 **MODEL Z-30**



HEAT BAKER

Radiant heat applications to all parts of the body. Size: 18 inches in length, adjustable width and height. Eight 60-watt bulbs controlled by a three-circuit switch.

All steel double wall construction.



MODEL "I"

McLELLAN SUCTION UNIT

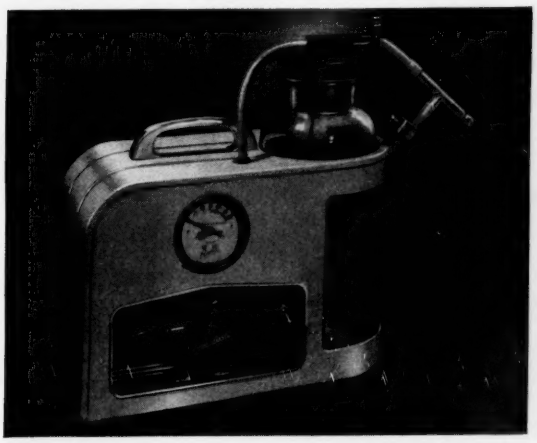
Bedside drainage is simplified with the McLellan Suction Unit, which can be used in routine postoperative care or the many indications for gastric or intestinal drainage.

Note These Features:

Powered by a slow-speed induction motor, the McLellan Unit can be operated continuously without overheating.

Weighing only eleven pounds, it can be taken to the bedside and placed on a small table or floor; ready for use as soon as the tube is in place. Unit measures 12 x 5 x 12 inches.

Capacity 0-150 mm. of mercury; silent in operation; overflow protection; pressure gauge; pressure lock; light metal carrying case.



MODEL SA-1

CONVULSIVE THERAPY

For shock treatments, a Burdick constructed Gilson unit. With a single dial control, this unit operates simply and delivers a constant current.

The only variable is the time factor.

Weighing only 25 pounds complete, the unit is compact and easily portable.

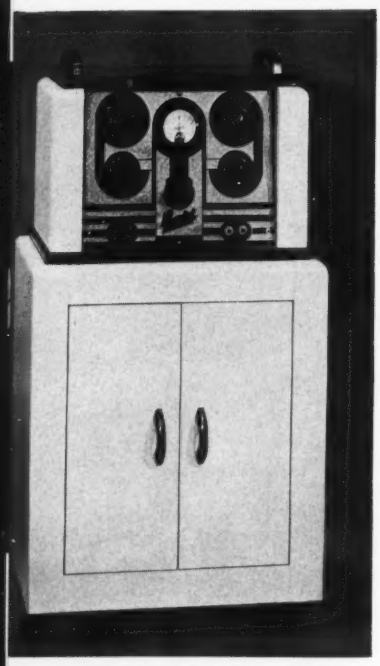
MODEL CT-1

Burdick

THE BURDICK CORPORATION

MILTON, WISCONSIN

PHYSICAL MEDICINE EQUIPMENT



MODEL EW-1-C

SINE-O-TRON

The Burdick Sine-O-Tron represents the latest development in low voltage current generators for the purpose of muscle stimulation, nerve testing, iontophoresis and electrolysis.

Producing wave forms ranging from 4 to 100 surges per minute, the unit delivers the following currents:

Galvanic . . . Straight, surging or reversing forms.

Pulsating Direct . . . 120 cycle, straight, surging, or reversing forms.

Pulsating Direct . . . Same as above except of 420 cycles.

A. C. Current . . . Non-surging for constant stimulation or contraction.

MUSCLE STIMULATOR

MODEL MS-2

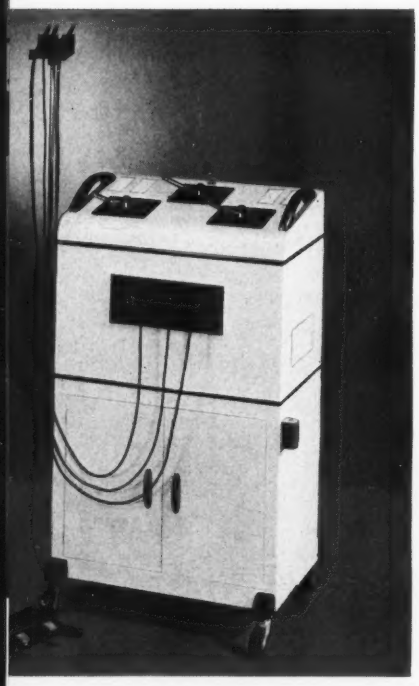
The MS-2 Muscle Stimulator is a compact, portable diagnostic and treatment instrument which utilizes modern electronic components to produce a true Faradic current with negligible skin sensation.

Available currents with the MS-2 are:

- **Galvanic**
- **Faradic**
- **Surging Faradic — Automatic**
- **Surging Faradic — Manual**
- **Pulsating Faradic**

Finished in ivory and brown.

Important uses for this unit are nerve testing, muscle stimulation, iontophoresis, and electrolysis.



ELECTROSURGICAL

Employing a vacuum tube for cutting and a spark gap for coagulation, the two currents of the Burdick Electrosurgical Unit may be blended, while cutting, to provide any desired degree of coagulation. The Burdick SU-4 Unit has greater power, smoother cutting, accurate control, and allows rapid, clean surgery with a minimum loss of blood. It is especially suited for underwater surgery.

Has these important features!

Master controls for cutting and coagulation intensity; Dual Selective foot switch for cutting and coagulation; Coupling condensers of the heavy duty, high voltage mica type; and transformers of the highest safety factors.

All metal cabinet with ample storage space for accessories. White enamel finish.

MODEL SU-4

Burdick

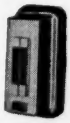
THE BURDICK CORPORATION

MILTON, WISCONSIN

PNEUMATICALLY OPERATED—SAFE WHERE THERE ARE EXPLOSIVE ANESTHETIC GASES

JOHNSON AUTOMATIC TEMPERATURE AND HUMIDITY CONTROL

for all types of Hospital Heating, Ventilating and Air Conditioning

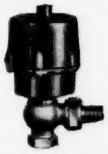


T-400 Room Thermostat

T-432 Heating-Cooling Room Thermostat

H-103 Room Humidostat

T-271 Heating-Cooling Thermostat for Air Conditioning Units



V-153 Sylphon Convector Valve

V-107 3-Way Mixing Valve

THERMOSTATS: Johnson room thermostats—single or two-temperature, heating-cooling—are furnished in a wide selection of adjusting features allowing accessible, key or closed adjustment of the temperatures to be maintained. All room thermostats are equipped with highly sensitive, bimetallic temperature sensing elements. Two-temperature, heating-cooling thermostats have two separate bimetallic sensing elements, allowing two completely independent settings, instead of a fixed temperature difference between the two operating temperatures as provided in most thermostats of this type. Room thermostats furnished with magnified luminous dials and thermometers for use in hospital rooms, dark rooms, etc., if desired.

Immersion, insertion and remote bulb thermostats are provided for the control of temperatures in ducts, tanks and enclosed chambers. Remote bulb thermostats have liquid-filled capillary systems with various styles of bulbs. Standard capillary length is 8 ft., with 15, 25, 35 and 50 ft. lengths available on special order.

HUMIDOSTATS: Johnson humidity control instruments are affected by the amount of moisture in the air and maintain any desired relative humidity. Available in room and insertion patterns with bi-wood, bow-wood, wood cylinder, hair, horn or animal membrane elements. The most sensitive control within 1% relative humidity, even as high as 95% at 100°F. Johnson Humidostats control all types of humidifiers.

HUMIDIFIERS: Johnson "steam grid" type (perforated pipe supplied with low pressure steam) or pan type (copper evaporating pan, brass heating coil and float control) are dependable humidifiers for central fan systems.

VALVES: Johnson valves and operators are simple and rugged. Standard sizes and body patterns to fit all requirements. Radiator and convector valves have seamless Sylphon metal bellows. Small Sylphon valves are used in applications where little space is available. Large valves for the control of steam, water, brine, liquids and gases are powered by operators which have diaphragms of specially molded rubber, resistant to age and oxidation.

Where maximum power is required for positioning at the slightest demand of the controller, valves may be equipped with precise pilot positioners.

DAMPERS: Johnson dampers control flow of air in heating, ventilating and air conditioning systems. Galvanized blades in flat steel frames with strong bracing form a rigid assembly. Black lacquer or corrosion resistant finishes. Dampers of monel metal, aluminum, copper or rust resistant steel on special order.

DAMPER OPERATORS: Simple, powerful operators with seamless metal or specially molded piston diaphragms operate dampers, through suitable linkage, at the command of distant controllers or switches. Furnished with or without pilot mechanism as described for "Valves."

T-800 Capillary Thermostat

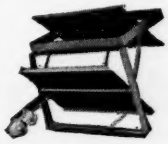
T-901 Capillary Submaster Thermostat

V-103 Globe Valve

V-111 Sylphon Radiator Valve

V-152 Valve for Air Conditioning Units

D-251 Piston Damper Operator



D-201 Double Mixing Damper

D-230 Constant Velocity Damper

ARNCO

curtain cubicles for hospitals

- representatives in principal cities of the United States
- installations in hospitals nation-wide and throughout the world.

A. R. Nelson Co., Inc.

hospital division

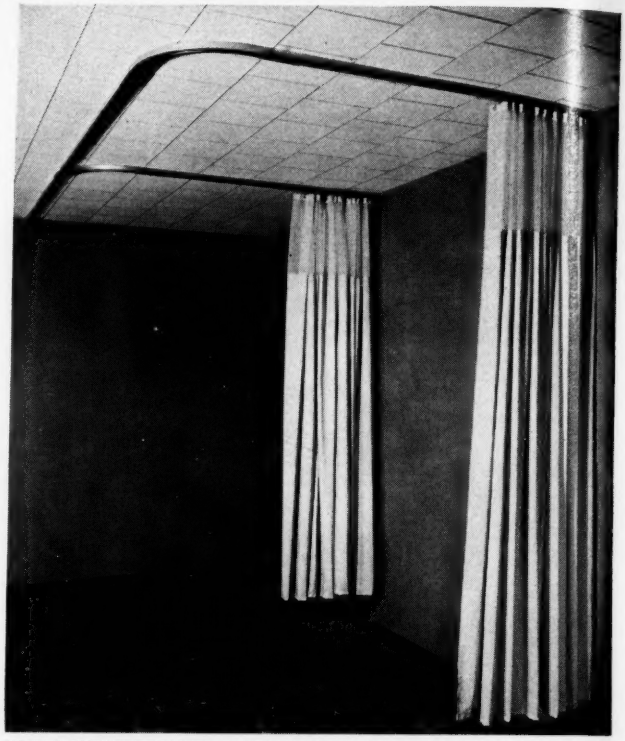
ceiling type (with ventilated curtain)

ARNCO ceiling track

ARNCO ceiling type cubicles have been designed to meet the increasing demand on the part of architects and hospital authorities, for a system of bed screening which is unobtrusive, does not conflict with lighting or wall fixtures, and which eliminates any possibility of interference with doors and windows.

The exclusive ARNCO extruded aluminum track may be installed in conjunction with either plaster or acoustic ceilings. Application may be either surface or flush construction (see details) and specially designed curtains provide adequate ventilation along with privacy. Conventional risers, with their inherent problems of rigidity and interference are of course eliminated.

Ease of operation, on straight or curved sections, and maximum sound deadening are features of the new ARNCO cubicle track.



ceiling track and carriers

The ARNCO ceiling track and carrier units are *not* an adaption of domestic drapery fixtures, but are specifically designed for durable performance under the rugged and continuous service required of hospital cubicle equipment. The carrier features plastic wheels on a zinc die cast axle, a bead chain for flexibility, and a rust-proof curtain hook. The resultant smooth operation and durability of this unit makes it an extremely important part of modern hospital equipment.

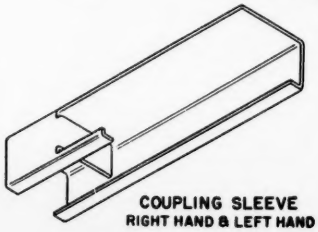
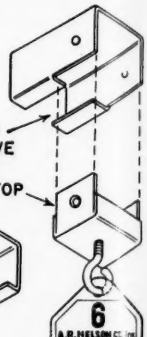
PLAIN
SLEEVE



COUPLING SLEEVE
RIGHT HAND & LEFT HAND



ARNCO modern curtain cubicles insure complete privacy . . . increase bed capacity

With ARNCO modern cubicle equipment, hospital ward space becomes a series of "private" rooms and bed capacity of semi-private rooms is increased without any expensive additions or alterations.

ALUMILITED aluminum fixtures — tubing, corner bends and fittings . . . strong, light, economical

The entire metal assembly of the ARNCO curtain cubicle is made of aluminum, with Alumilite finish . . . a hard, smooth finish which will not peel, and which is highly resistant to abrasive wear and to corrosion resulting from atmospheric conditions, chemical fumes and steam.

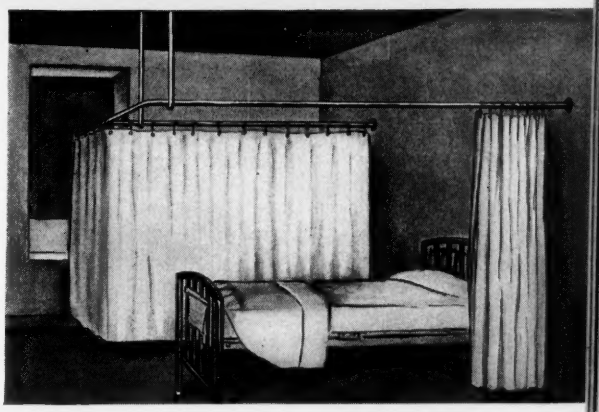
prefabricated construction reduces installation time to the minimum . . . no "on-the-job" fitting required

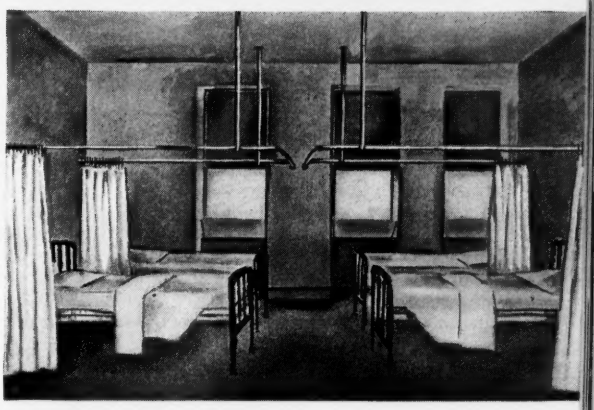
All specifications for ARNCO curtain cubicle installations are determined at the time or order acceptance, and all rod measuring, cutting, threading, boring, etc., as well as all curtain tailoring, is completed in the ARNCO plant before shipment of cubicle parts. The provisions necessary for anchoring the cubicles to walls and ceilings of the wards are also determined in advance.

With "on-the-job" cutting and fitting eliminated, the time required for an ARNCO installation is greatly reduced. A marked decrease in labor costs, as well as a minimum of interruption in hospital routine are effected. This time element is of utmost importance.

all connections threaded . . . no special tools needed

All connections of the ARNCO curtain cubicle are threaded — a strength giving feature — and concealed screw bushings insure the making of flush hair line joints. Being threaded, pre-assembled and fitted at the factory, a minimum amount of tools is required for installation.





detail

note: Arrowheads indicate threaded joints.

ARNCO corner bend construction

To reinforce the most vital point of cubicle construction, ARNCO has built unusual strength and rigidity into the corner bend assembly. At the point of attachment which supports the entire structure, the improved arm actually goes into a reinforced connector with a heavy ½-in. projection. All corner bends are of the same gauge and outside diameter as the tubing for tracks, ceiling supports and braces, and are arranged so that there will be no gaps after curtains are drawn.

ARNCO roller curtain hooks and curtains

Arnco curtain hooks, made of heavy gauge aluminum wire, snap over the tubing which prevents their jumping off the track when being operated. The hooks are designed to pass suspension brackets and are equipped with two rollers of long lasting plastic with nickelled bearings.

Curtains are of a selected, closely woven Jean cloth, with rust-proof metal grommets machined every 6 in. along top hem. They are available in various pastel shades.

ceiling type curtain cubicles

general Ceiling type curtain cubicles shall consist of extruded aluminum track, roller carriers and curtains, installed on or recessed in finished ceiling. Corner bends of 12″ radius shall be used to connect front and dividing tracks so that individual screening of beds is provided with curtains stacking at walls.

track To be of specially designed extruded track, 1 7/16″ x 15/16″ x 1/16″ thick with double thickness at all four corners, with raceways for two-wheel carriers, permitting smooth, uninterrupted movement of carriers on both straight and curved sections. Connections between sections of track and corner bends to be true and square and to be provided with 3″ aluminum sleeves. At stacking end of track and at points tangent to corner bends, aluminum end fittings shall be provided. End fittings where curtains stack shall have removable stop permitting the insertion of otherwise non-removable carriers, and shall be numbered same as curtain label.

carriers To consist of specially designed die cast zinc axle, plastic rollers, bead chain and hook, and to operate freely regardless of curtain length.

curtains To extend from underside of track to 15″ from floor and to consist of Jean cloth 6′-0 long, color as selected, with an integral upper section of nylon mesh, neutral shade, to provide ventilation and light. Curtains to be 10% wider than track and to be constructed as described in Arnco specifications for suspended type curtain cubicles.

alumilite finish (See specifications under "Suspended Type".) Recommended only on track and fittings for surface application.

suspended type curtain cubicles

general and assembly Curtain cubicles shall be provided in a manner to completely screen each bed separately. The horizontal tubing shall be placed 7 ft. 3 in. to center of tubing above the finished floor. The assembly of each unit shall be such that no straight track shall terminate at any point of the radius of the corner bend. A second bend shall be used to carry the curtain past the straight run of track to eliminate all possible gaps. All connections between tubing members, and tubing, and fittings, shall be made by means of concealed screw connections to provide hairline joints, except at wall and ceiling flanges.

tubing All tubing used for tracks, ceiling supports and braces shall be seamless new drawn aluminum, 1 in. outside diameter x .065 type 63 S-T 832 Aluminum-Alloy finished in a high polish.

corner bends All corner bends shall be the same gauge and outside diameter as tubing and shall be made to a 6-in. inside radius to exactly 90°.

wall and ceiling flanges Shall be drop forged, at least 3 in. in diameter and fastened to walls and ceilings by means of toggle bolts or rawl plugs concealed through the center. Ceiling flanges shall be not less than 1″ longer than wall flanges to provide added rigidity for ceiling risers. Wall flange at rear of each cubicle shall be numbered to correspond with label on curtain. Fastening of tubing to wall and ceiling flanges shall be by means of special Phillips head P. K. screws.

suspension bracket Shall be drop forged and so designed that it will allow the curtain to move freely past the ceiling supports.

hooks Curtain hooks shall be of No. 7 gauge wire, designed to pass suspension brackets and equipped with two rollers of long lasting plastic with nickelled bearings.

curtains All curtain material shall be a selected closely woven Jean cloth with a count of not less than 160 threads (96 warp threads and 64 filling threads) per inch of quality yarn. The color or colors of curtains shall be standard as selected. All curtains shall be Sanforized shrunk and only vat dyes shall be used to insure fast colors. Curtains shall have top hem 1½ in. wide of triple thickness of material through which rustproof metal grommets are machined every 6 in. Bottom hem 1¼ in. wide. All seams to be sewed 2 needle, interlocked so they cannot ravel. All curtains shall be at least 10% wider than length of tracks upon which they are used and shall extend down to 15 in. from finished floor. On top hem of each curtain shall be sewed in label to denote the size.

alumilite finish The entire metal assembly shall be treated by an electro-chemical process so as to obtain a dense, adherent coating of aluminum oxide, thus providing a hard, clean, smooth finish which will not peel, and which is highly resistant to abrasive wear and to corrosion resulting from atmospheric conditions, chemical fumes and steam.

classroom clothing rack and shelf

A clothing rack and shelf low priced for inexpensive installations. Hook strip of clothing rack is of extruded aluminum—comes with double prong aluminum hooks. Sturdily made of aluminum seamless tubing. Non-peeling alumilite finish. Manufactured in desired lengths 12″ deep. Coat hangers are not furnished.

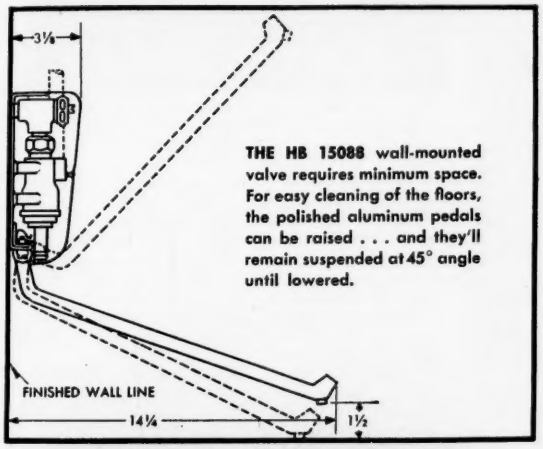
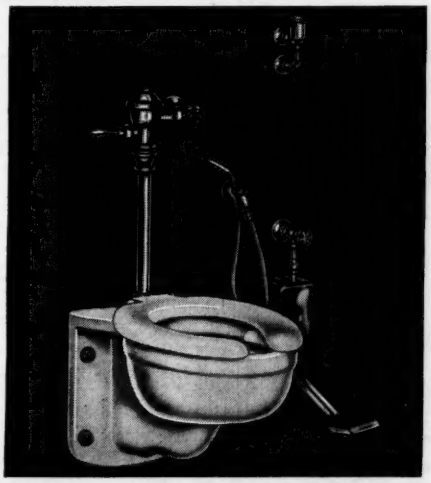
Angled pedals permit one-foot control of water flow and water temperature

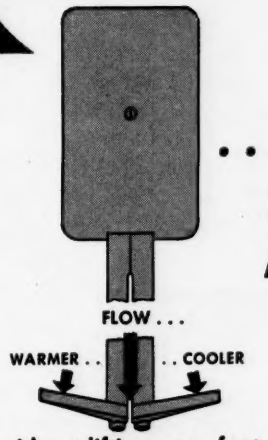
HF 12145 P vitreous china lavatory with HB 15088 pedal valve and type N tempered supply line. This valve is ideal for use with surgeons' scrub-up sinks and other lavatories, too.



THE HB 15088 wall-mounted valve requires minimum space. For easy cleaning of the floors, the polished aluminum pedals can be raised . . . and they'll remain suspended at 45° angle until lowered.



HF 13411 VP GLENCO TOILET is shown with HB 15334 foot valve bedpan cleanser assembly. Pedal valve can also be specified for other closets and clinic service sinks.



. . . with this new Double-Pedal Mixing Valve

without lifting your foot

Angled pedals make this new wall-mounted, foot-operated valve more convenient to use. One foot controls both water flow and water temperature, leaving hands *completely* free.

With this new pedal design, the heel acts as a pivot. Light pressure on one pedal starts flow of hot water, pressure on the other a supply of cold water. An even down-pressure produces tepid water. You get maximum water flow with only 1½" pedal travel.

This new self-closing valve brings welcomed convenience to many fixtures. With a bedpan cleanser, for instance, it eliminates fussing with other valves. Water is controlled solely by the foot pedals. When pedals are released, water automatically shuts off . . . no pressure is left in the hose.

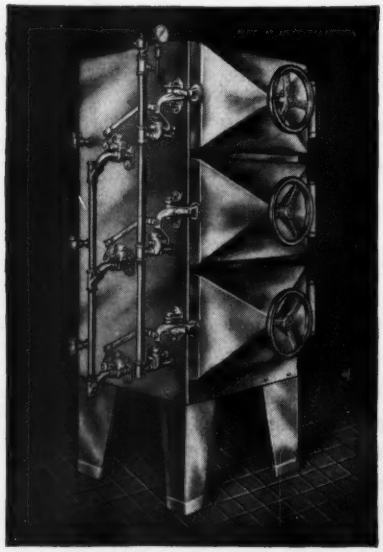
MARKET FORGE
STEAM COOKERS

Experience has proved that Market Forge Steam Cookers cook better, faster, and at lower cost. So don't be misled . . . do away with top-of-the-stove cooking . . . send for free booklet entitled "Ten Reasons Why Food Service Operators Prefer Market Forge Steam Cookers."

Market Forge Steam Cookers provide the best in food service and efficiency. Economy in preparation, speed in cooking and tastier food are the direct advantages of using these outstanding Steam Cookers. Over a half century of experience in producing the finest metal products has resulted in the Market Forge reputation for design perfection and operating efficiency.

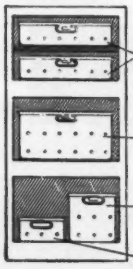


Insulated door front. Free floating inner door. Easiest door to handle. Easiest steam cooker to service; has a speedily and easily replaced gasket.

MODEL 3M

Direct connected Market Forge Steam Cooker. 3-Compartment, 6-bushel capacity. Equipped with synchronized thermostatic control, pressure-reducing valve. Individual steam supply, exhaust valves and thermostatic steam trap for each compartment. Safety valve and steam gauge.

BASKETS

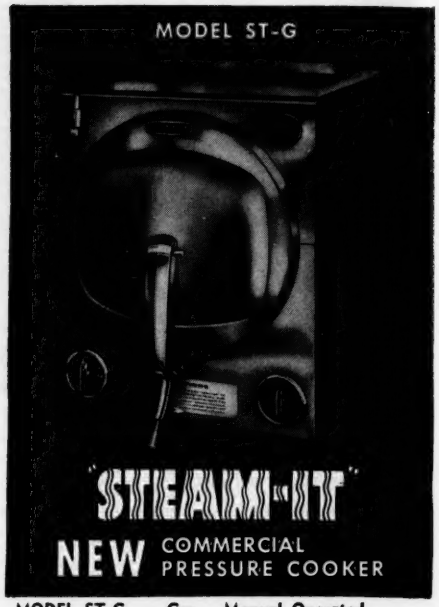


Available in four sizes — perforated or solid.

Tall narrow · Tall wide
Flat wide · Flat narrow

TWO STYLES

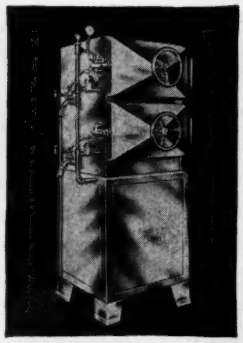
Stainless Steel Seamless — 20 gauge, rounded corners, verminproof, polished finish inside and out. Fitted with 5/16" stainless steel chest-type drop handle.
Stainless Steel Seamed — 24 gauge stock with locked-seam corners, fitted with stainless steel chest-type drop handle.



MODEL ST-G — Gas — Manual Operated
MODEL ST-AG — Automatic Gas
MODEL ST-E — Automatic Electric
MODEL ST-S — Direct Steam

Counter model pressure cooker. Now makes pressure cooking available to all food service operators. Designed for frequent fresh food preparation. Gas or electricity operated, it generates its own steam (5-15 lbs. pressure). Full automatic models are completely controlled by the clock —require no watching. Available for direct operation with steam connection. Easy to install, service and operate.

Equipped with Safety Valve, Blowout Plug, Low Water Cut-off, Thermostatic Steam Trap, Automatic Steam Vent and Timer. Capacity: 3 Cafeteria Pans 12" x 20" x 2¼".



Automatic Sliding Stainless Steel Shelves, one piece die formed, pull out when doors are opened. Makes hot baskets accessible without reaching into compartment.

Intermediate Removable Stainless Steel Shelves, one piece die formed, permit the use of additional shallow or flat baskets. Available for all models. Also available as an intermediate shelf.

MODEL 2MG

Full Automatic Gas Fired Market Forge Steam Cooker. 2-Compartment, 4-bushel capacity. For operation by gas when direct steam is not available. Equipment includes 2 H. P. Boiler, burner and controls, automatic water feeder, safety pilot and automatic gas control valve. Also Model 2M-E available for electrical operation.

COMPARTMENT SIZES AND MATERIALS

Compartment interior dimensions: 14" x 23¾" x 24". Door opening 11¾" x 21¼". Steam Cookers are available in three different types of material. #1 is carbon steel, hot galvanized after fabrication and finished on the outside with heat-resisting enamel. #2 is stainless steel interior with heat-resisting enamel. #3 is made with stainless steel interior and polished stainless steel exterior complete with chrome-plated fittings.

Ethical and Religious Directives for Catholic Hospitals

(MEDICO-MORAL CODE)

For the special use of doctors, nurses, priests, hospital administrators, surgery departments of the hospital, medical libraries, moral theology classes and for anyone whose knowledge must be accurate regarding ethics that concern treatment of the sick. Excellent as a study item for nursing schools and a hand-book for student nurses.

set of five booklets—$2.00
quantity prices on individual booklets

CUMULATIVE INDEX for HOSPITAL PROGRESS, 1940-1949

Volumes 21-30

Most useful in hospital or school of nursing libraries. Index to 10 years of HOSPITAL PROGRESS with articles listed alphabetically by author and title, and cross referenced. Provides invaluable source of reference on hospital service and nursing education in the Catholic field.

$2.50—3 or more to one address 15% discount

ROUTINE SPIRITUAL CARE PROCEDURES

by G. H. FitzGibbon, S.J.

As an aid in the spiritual care of patients the material in this booklet is vitally important for nurses, doctors and laymen in hospitals. Gives exact procedure and insures prompt action on such topics as—Emergency baptism • When and for whom to notify a Priest • recent death and the Sacrament • unconscious, dying non-Catholics • dying infants • repeating a doubtfully valid baptism.

quantity quotations

25—$3.50 50—$6.75 100—$12.50 200—$24.00

COURSE OUTLINES FOR TEACHERS

by G. H. FitzGibbon, S.J.

For religion classes in the Hospital School of Nursing. Sections in Part I concern the Commandments, Sacraments and the Creed—the essentials are presented in a practical sequence.

$1.50 for the set

TIME and COST STUDY of MEDICAL RECORD LIBRARY PROCEDURES

by Sister M. Yvonne, S.S.M.

An effective aid to wise planning of activities of the Medical Record Library covering 22 of the procedures carried on. Based on facts, this study includes charts, tables, sample record reports and actual salary costs involved. Adaptable for needs of small or large hospitals.

75¢ a copy

NURSING SERVICE IN CATHOLIC HOSPITALS

An especially informative manual for directors of nursing service. Deliberations of a three day conference held in November 1951 by C.H.A. are included focusing attention on reports of work groups, organizational charts and such pertinent topics as—the organization of nursing service, financial aspects of nursing service administration, team relationships and group nursing.

75¢ a copy—5 copies or more, 65¢ each

CATHOLIC SCHOOLS OF NURSING

In handy booklet form a listing by state and city of Catholic Schools of Nursing offering diploma programs, basic degree programs, and practical nurse programs. Includes name of religious order conducting the educational program. Corrected as of January 1, 1954. Order a supply to use in fostering interest in a nursing career through your recruitment program.

25¢ a copy; 5 for $1.00; 10 for $1.50
25 for $3.00; 100 or more 10¢ each

Vaseline

TRADE-MARK®

Sterile Petrolatum Gauze Dressings

always sterile, always ready for "1001" surgical uses . . .

Outstandingly successful for burns and abrasions, these sterile-packed, ready-made dressings have countless other uses in surgery. Particularly indicated for:

WOUND COVERING, *as for traumatic injuries and after surgery* . . . to protect from irritation and contamination, to avoid adherence.

PACKING, *as in abscess cavity* . . . to permit healing from the bottom, to meet aseptic precautions.

PLUG, *as after hemorrhoidectomy* . . . to help control bleeding without sticking and subsequent tearing.

DRAIN, *as for septic wounds* . . . to avoid maceration, pressure necrosis and erosion.

Available in three sizes.

No. 1—3" x 36" (6 in carton)
No. 2—3" x 18" (12 in carton)
No. 3—6" x 36" (6 in carton)

Obtain from your regular source of supply . . . insist on the ready-to-use, dependably sterile dressings in the foil-envelopes.

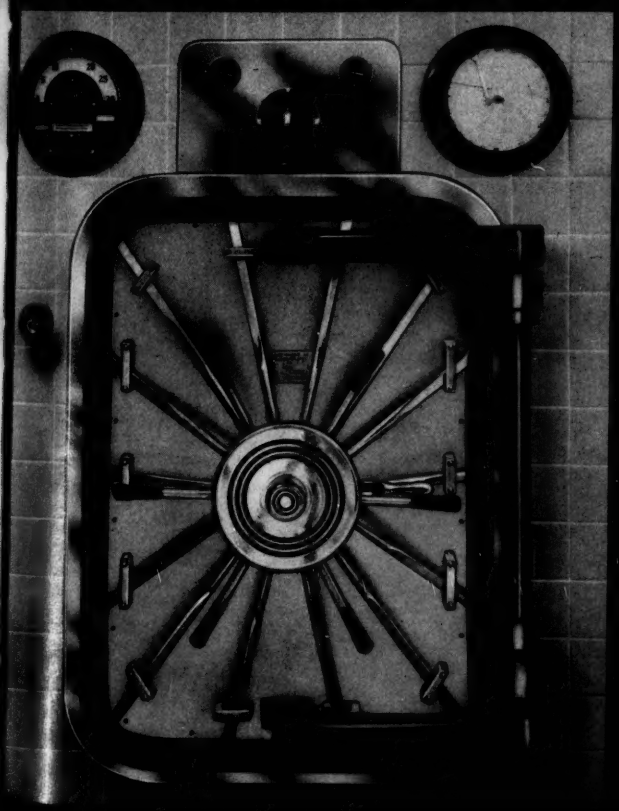
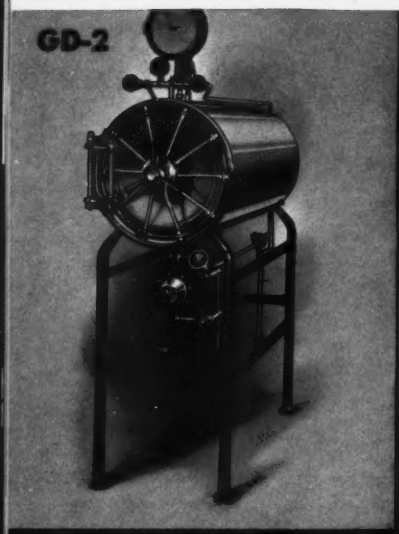
UNITS FOR ALL TYPES OF LOADS

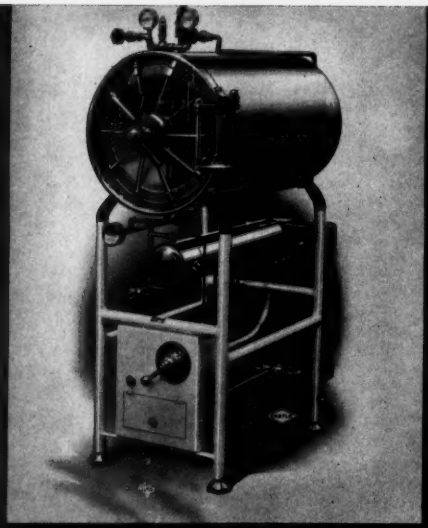


Castle

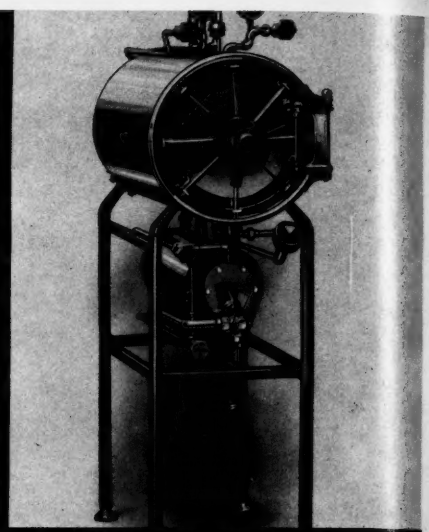
STERILIZERS



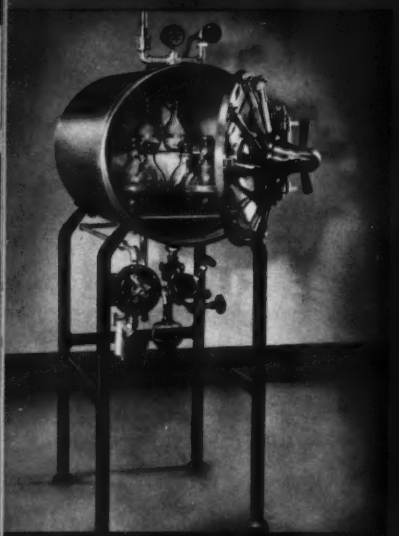
Dressing and Pressure Utensil Sterilizer—Steam Heat.



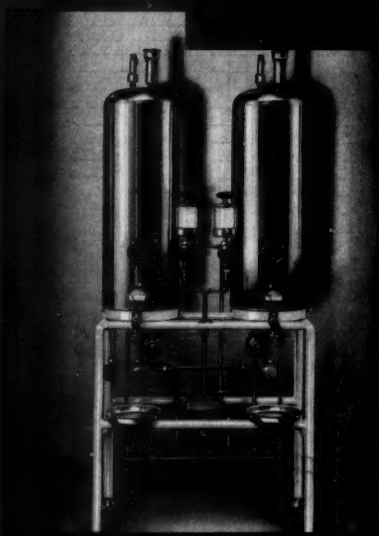
Dressing and Pressure Utensil Sterilizer—Electric Heat.



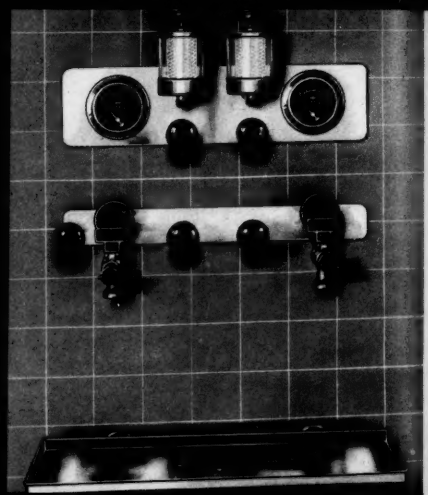
Dressing and Pressure Utensil Sterilizer—Gas Heat.



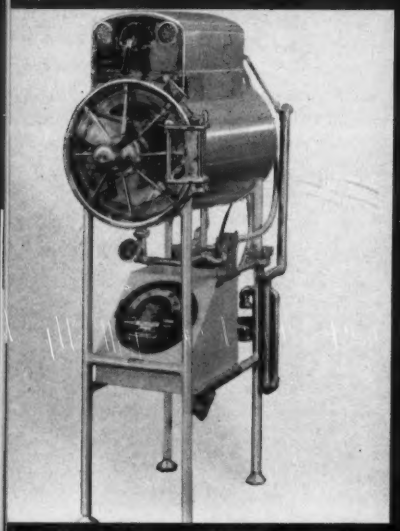
Laboratory Autoclave — Single and Double Wall Types. Available for Steam, Gas or Electric Heat.



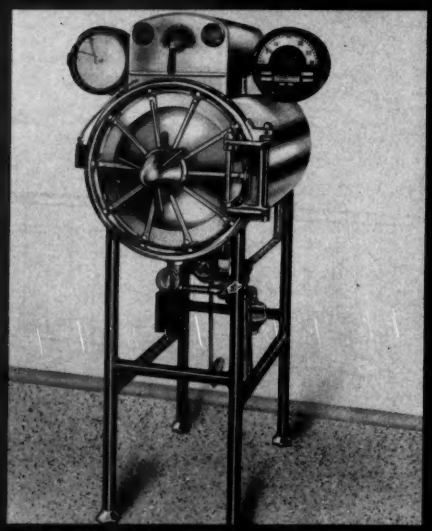
Water Sterilizers—Free Standing Type. Steam, Gas or Electric Heat.



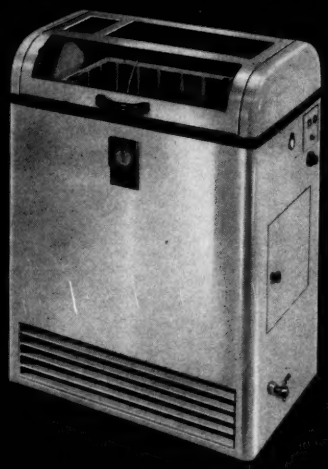
Water Sterilizers—Recessed in Wall. Steam or Electric Heat.



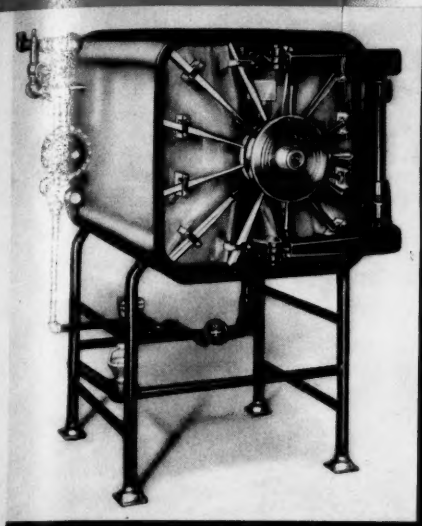
Open Mounted Pressure Steam Sterilizer for dressings and instruments, electromatically governed by THERMATIC CONTROL.



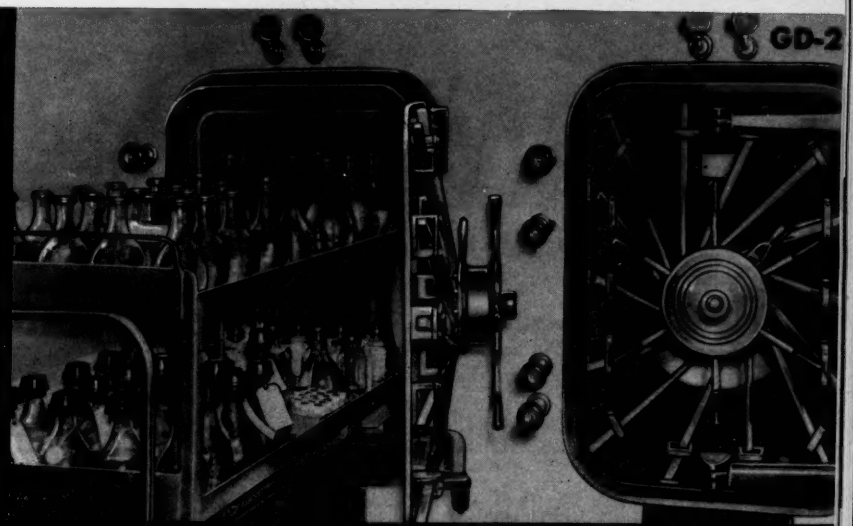
Open Mounted Pressure Steam Sterilizer with alternate positioning of THERMATIC CONTROL unit and Recording Thermometer.



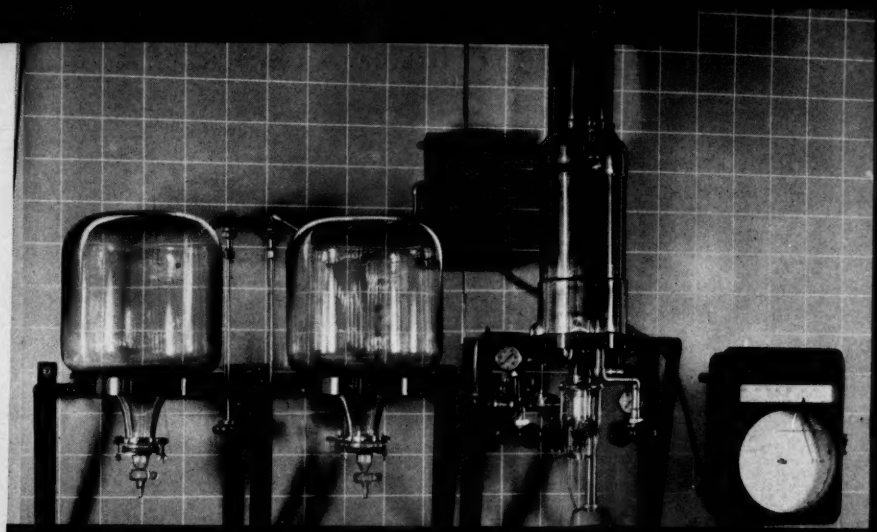
HUMIDICRIB—facilitates precision control of humidity-temperature ratio with speed and convenience. Invaluable in premature cases and infant care.



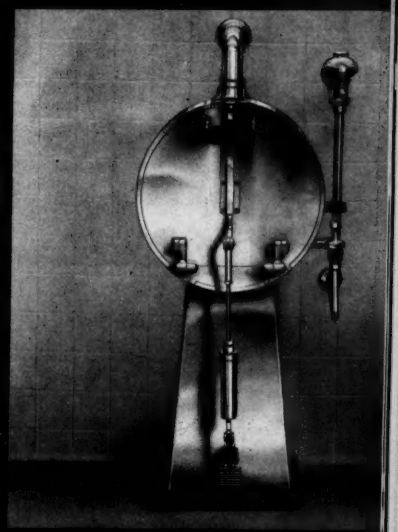
Pressure Sterilizer for Terminal Sterilization of Infants' Formula.



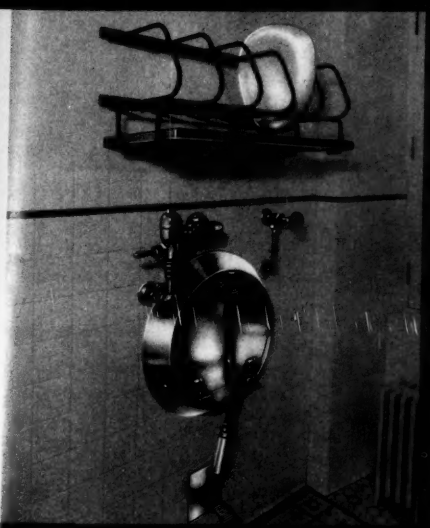
Castle Rectangular Pressure Sterilizers for sterilization of Dressings, Utensils and Solutions in large quantities.



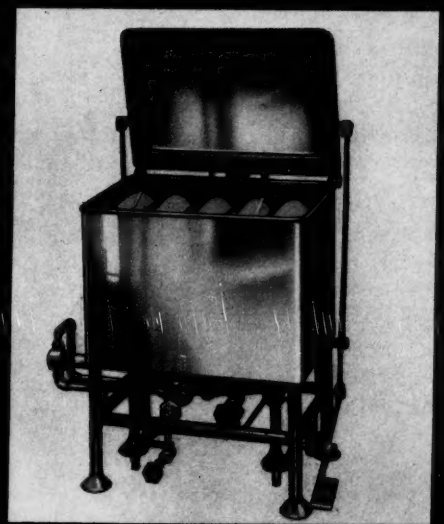
REFLUX Still, 10 gal./hr. capacity, with Recording Conductivity Meter. Insures uniform distillate of standard purity throughout 24-hour day. May be adapted to low pressure steam line operation.



"Regal" Pedestal Type Bedpan Washer and Sterilizer.



"Regal" Recessed Type Bedpan Washer and Sterilizer.

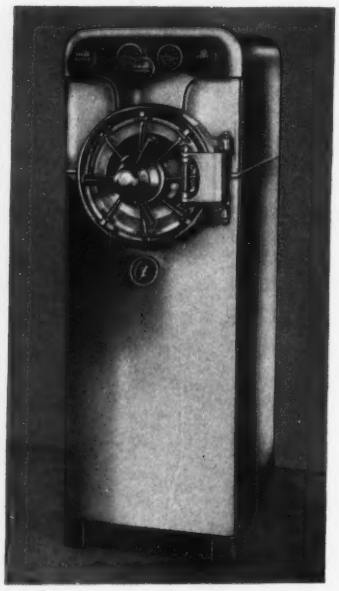


Bedpan Sterilizer—5 Pan capacity. Boiling Type. Steam, Gas or Electric Heat. Steamer Type. Steam Heat Only.

"Monarch" Hopper Type Bedpan Washer and Sterilizer.

SAFE, RAPID TECHNIQUE FOR CLEANSING AND STERILIZING SURGICAL INSTRUMENTS

TWO MAKE A TEAM: These two sterilizers constitute an ideal combination for the surgical sterilization of instruments under all routine or emergency conditions.

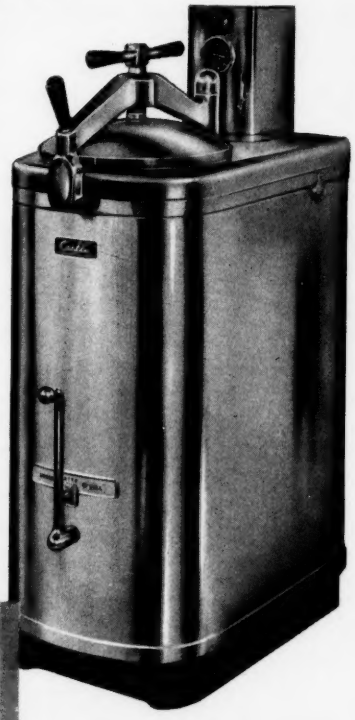


INSTRUMENT WASHER-STERILIZER

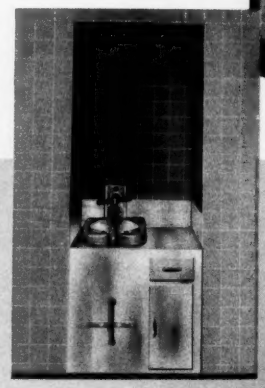
The Castle Instrument Washer-Sterilizer, in a single operation, cleans, sterilizes and dries instruments in 10-12 minutes — leaving them ready for immediate use by the surgeon. Newly designed, it is a model of streamlined efficiency. Can be used as emergency sterilizer whenever desired.

HI-SPEED EMERGENCY INSTRUMENT STERILIZER

Provides surgical sterilization of soiled or contaminated instruments for emergency reuse in less than 5 minutes. Equally suitable for routine sterilizing procedures.



Recessed installation for Pressure Instrument Washer-Sterilizer.



CONSULT OUR PLANNING DEPARTMENT

Should the hospital's need be a practical Sub-sterilizer Room • Milk Formula Laboratory • Scientific Laboratory • Compact Central Sterile Supply, Castle know-how has often solved the problem along lines most economically practical.

Castle's Planning Department is a gratis service, conceived to assist the hospital staff, the architect and hospital consultant in all projects involving surgical sterilization and lighting.

Detailed catalogs and specifications available on all equipment.

AVAILIBLE FILMS FOR VISUAL EDUCATION

16 mm. color films depicting practical technique for preoperative preparation of dry supplies, sutures, instruments and related materials, and detailed steps involved in clean-up and disposal of contaminated supplies following a septic case. Write for booking details for these gratis films.

ONLY THE DEBS MEDI-KAR

"the 'Cadillac' of Medication Carts"

GIVES YOU ALL These Advantages

- **PROVEN SUPERIORITY**
  over 1000 Hospitals using 3800 Medi-Kars

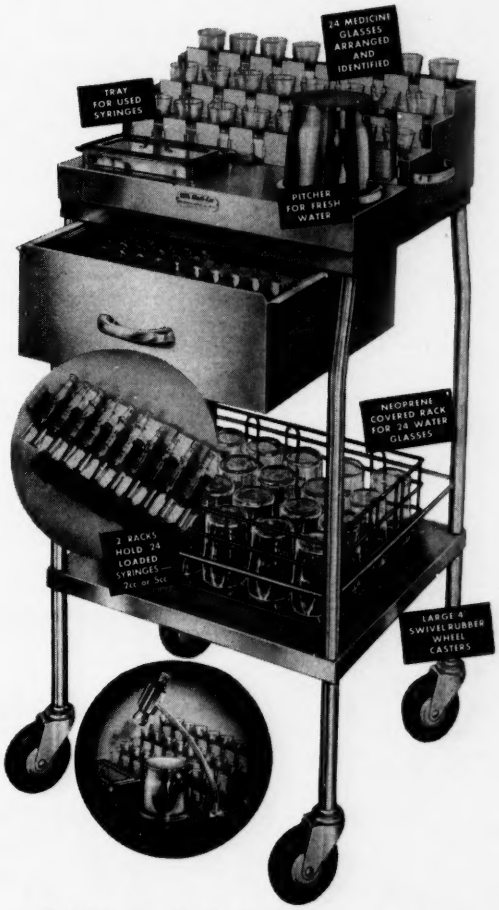
- **QUALITY-BUILT**
  18 - 8 STAINLESS STEEL throughout — ALL welded — no screws or bolts

- **MAXIMUM EFFICIENCY**
  One Nurse delivers 48 or more oral and hypo medications

- **SAFETY CONTROL**
  All medications — both oral and hypo individually identified and visible at all times

- **EASY TO USE**
  Its Streamlined, compact size permits access to every bedside

- **QUIET OPERATION**
  SOUND PROOFED — rolls easily on four Rubber mounted swivel casters



- **Quickly pays for itself**
  Savings up to 53% in Nursing time—by actual time study

- **Syringe breakage radically reduced**

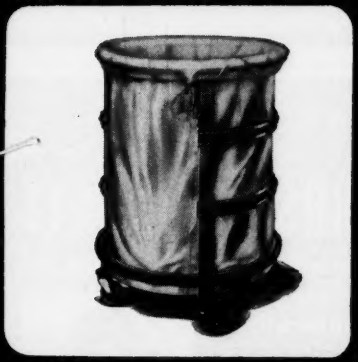
HOSPITAL EQUIPMENT

for Extra Safety, Extra Service, Extra Life

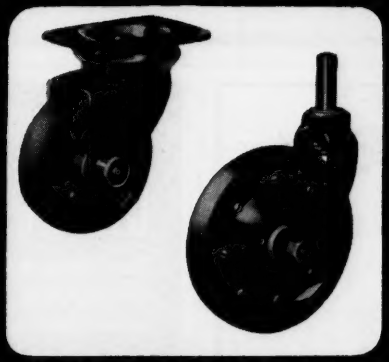
COLSON Model 4432 Wheel Chair has 4 wheel running gear for maximum stability. Fully reclining with cushion rubber wheels. Available in 3 adult widths — narrow, medium or wide — also juvenile.

COLSON Model 6868 Post-Anesthesia Stretcher permits 1 nurse to take care of 8 to 12 post-operative patients. 80" long Litter elevates to 20", locks automatically.

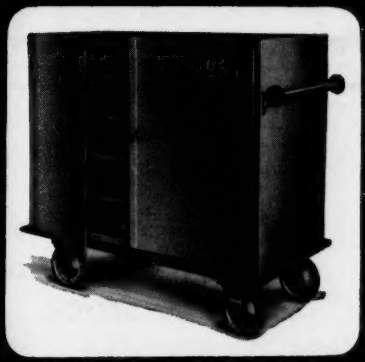
COLSON Model 4935 Inhalator for treating respiratory ailments. Visible water supply, high and low speed, control to prevent overheating if water supply is exhausted.



COLSON Model 6601 Linen Hamper is mounted on 4 easy-rolling ball-bearing swivel casters for fast, silent operation. Upper and lower frame members have rubber bumpers to protect walls and equipment.



COLSON Casters of many types are designed especially for hospital use. Often a set of COLSON Casters makes old equipment handle like new — at very low cost.



COLSON Stainless Steel Tray Trucks are available in over 30 different models. Enclosed type shown keeps patients' food warm longer. All types have rubber bumpers, ball-bearing casters, cushion rubber tires.

Write today for free catalog covering COLSON's complete line of hospital equipment.

COLSON representatives are trained to assist you in the selection of the proper equipment to meet your needs—*exactly.* In addition to a wide range of standard models COLSON is equipped to design and manufacture *special* equipment to meet unusual requirements.

HANOVIA

Makers of the Finest Therapeutic Equipment for Hospitals and the Medical Profession

SUPER ALPINE LAMP

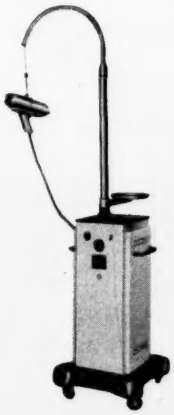
Model S 2005

Entirely new. A self-lighting high-intensity quartz mercury arc burner develops the complete spectrum, including ultraviolet rays of short, medium and long wavelengths, an effective spectrum for therapeutic application. Powerful and sturdy in design with improved manipulative convenience and the 10 step feature (intensity control). Portable for ward use.

LUXOR ALPINE LAMP

Model S 2303 A

Marvelous ultraviolet quartz lamp. Effective and economical to operate—with simplified control. Like all Hanovia mercury quartz generators the burner delivers the COMPLETE mercury spectrum DEFINITELY required for general therapeutic use. Equipped with self-lighting quartz tube. Portable for ward use.



AERO-KROMAYER LAMP

Model 2221 A

Especially designed for local application. The Burner housing is COOLED by AIR instead of water, using new principle of aero-dynamics; no kinking of water tubes, no water stoppage, no over-heating, no necessity for cleaning of water system. It has a more concentrated light source and gives more ultraviolet through applicators. (The Burner operates in every position and delivers a constant ultraviolet output. Automatic, full intensity indicator. Side emission applicators.)

SAFE-T-AIRE PORTABLE AIR STERILIZER

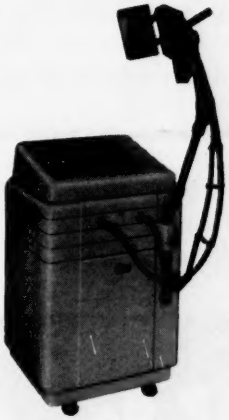
Catalog No. ST 2830

Utilizing the highly efficient germicidal qualities of ultraviolet. Mounted on casters, this new unit can be easily moved from room to room—wherever air sterilization is required. Streamlined, attractively finished—light in weight—well balanced—equipped with guard rails for easy wheeling. Air disinfection of vacated isolation rooms accomplished in one hour. Adaptable for other hospital areas where elimination of airborne contamination is desired.

SOLLUX INFRARED HEAT LAMP

Model No. 5404

Therapeutic Heat Rays can be used to advantage in both Organic and Functional Nervous Diseases, in the field of surgery following fractures . . . dislocations . . . sprains . . . bursitis . . . etc. Model 105—as illustrated—Supplied with 500 watt bulb or a 600 watt element. Attractively finished in polished aluminum and nickel. Beauty of design, sturdy in construction.



HANOVIA DIATHERMY

Catalog No. 27300 R

Delivers adequate power for heaviest duty and extraordinary flexibility of application—projects a new standard in Diathermy equipment. Can be used with any approved types of applicators—air spaced pads, induction cable, drums or special drum applicators, cuff electrodes and for minor electro surgery.

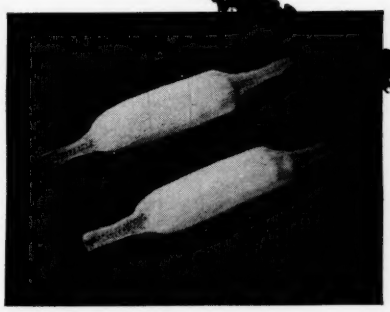
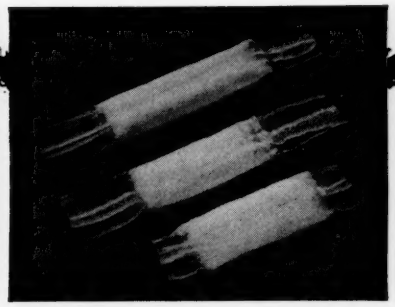
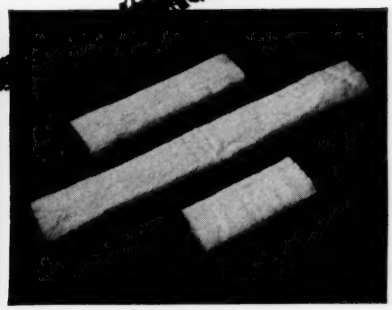
patient comfort *Plus* hospital economy

Carolina Sanitary Napkins

● Carolab's *cotton*-filled sanitary pads are made from quality materials as carefully processed and treated as Carolab's famous surgical cotton. They do not shrink or become brittle or discolored when sterilized. Heat actually improves them . . . makes them thicker and fluffier to provide the downy-soft comfort and maximum absorptive qualities so important in surgical and obstetrical cases.







Best OF ALL

Cotton-filled, stockinette covered: a soft but sturdy, tubular-knitted casing which completely encloses the cotton . . . convenient, comfortable—no seams, no overlap. Available in all standard hospital sizes with regular tabs.

Best IN ITS CLASS

Cotton-filled, gauze covered: same fine, soft, absorbent cotton, wrapped in good quality gauze. In all standard hospital sizes with regular tabs; regular size with short tab.

Best FOR THE MONEY

Tabless, cotton-filled: gauze covered, most economical of all cotton pads. In three convenient sizes: 3½"x8", 3½"x12", and 3½"x24". Also available—cellulose-filled: gauze covered, with tabs—an economical substitute for cotton. Four styles: regular, with short or long tabs; senior, with long tabs; hospital, 12" with long tabs.

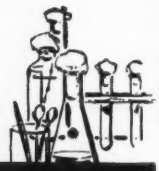
CAROLAB Hospital Supplies

Carolina Absorbent Cotton Company

(Division of Barnhardt Mfg. Co., Inc.)

CHARLOTTE 1, NORTH CAROLINA

From ENT clinic to the OB ward . . .
all departments find CAROLAB COTTON BALLS
are handy and convenient to use—
completely free of nibs and wispy ends.
They are also an economical substitute
for sponges in many hospital procedures.
The laboratory and dispensary
find that they save time and money.
Cleaning instruments and equipment,
stopping test tubes, bottles and capsule containers,
are all duties which can be speeded up
at lower costs with CAROLAB.



7 reasons why leading hospitals choose CAROLINA COTTON BALLS

1. Uniform in size and shape
2. Firm, compact construction
3. Made of finely spun, selected long staple cotton
4. Highly absorbent
5. Labor-saving—ready for immediate use after sterilization
6. Actually more economical to use than "home-made" cotton balls or other manufactured balls of same high quality
7. Available in *5* standard sizes:

super	2000 per case
special	2000
large	2000
medium	4000
small	8000

special is same size as large but is almost twice as dense

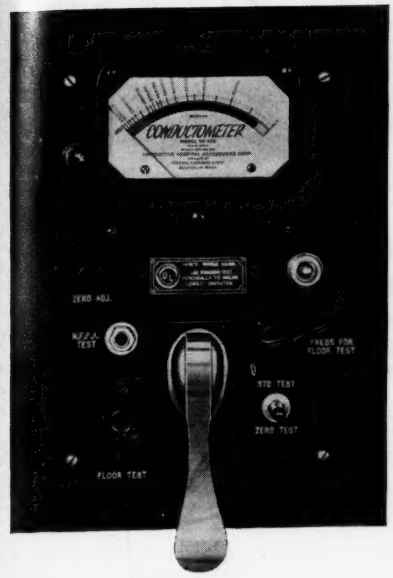
CHECK THESE THREE POINTS

FOR GREATER OPERATING ROOM SAFETY!



1 CONDUCTOMETER*

REG. U.S. PAT OFF. PATENT PENDING

Is there a CONDUCTOMETER in each operating room, delivery room, emergency room and in other hazardous locations in your hospital? To avoid disastrous static spark explosions establish a routine of CONDUCTOMETER tests . . . A routine as rigid as that of the scrub-up! (See N.F.P.A. Booklet No. 56 regarding electrical resistance testing of flooring, equipment and personnel.) Check up now and lose no time in correcting any possible deficiency in this vital protection!

2 CHACO* CONDUCTIVE RUBBER SLIPON

TRADE MARK

Do all members of your surgical staff — AND visitors to surgery — wear CHACO Conductive Rubber Slipons? These easy-to-use conductive rubber slipons are a vital link in guarding against the danger of operating room explosions. Light for comfort — strong for wear — low in cost! Keep a supply on hand!

Also manufacturers of conductive rubber sheeting!
See our catalog in Hospital Purchasing File.

WHAT DO YOU PAY FOR BLADES?

KEEN-EDGE®

WILL SAVE PRECIOUS DOLLARS FOR YOU!

The list of users of "Keen-Edge" blades reads like a Who's Who of Hospitaldom. Here's why! "Keen-Edge" are warranted to be equal to any blade in existence for sharpness and uniform high-standards. They are the product of one of the nation's largest manufacturers and are guaranteed by him to equal, at all times, the high quality of his own nationally advertised brand. Only the name and price are different.

We sell "Keen-Edge" blades at these prices only because our nation-wide distribution permits us to buy in tremendous quantities. There is no middle-man's profit.

You be the judge. Order "Keen-Edge" today. Try them in your surgery. If they don't measure up, return the unused blades to us. The trial has cost you nothing.

ONLY

$7.90

PER GROSS IN 25 GR. LOTS

1 gross, $10.00; 4 to 8 gr., per gr. $9.00; 9 to 24 gr., per gr. $8.80

HERE'S THE NEW, EASY WAY TO REMOVE PLASTER CASTS

"CYGNET"

Patent Pending

Cygnet just ROLLS the cast off. It's as easy as that!

An entirely new approach to an old problem. Cygnet uses no knives, no whirling or oscillating blades. It is noiseless, dustless and almost without effort. There is positively no danger of injury to patient.

At the time of cast application a length of stainless-steel wire is placed over the padding and covered with plaster bandage. To remove the cast just attach Cygnet to one end of the wire and turn the crank. A procedure that used to be irritatingly tedious is now carried out in seconds.

We'll be glad to send you complete information if you'll drop us a card.

The Cross and the Christian

by Pius-Raymond Régamey, O.P.

$3.25

Through the ordinary sufferings of daily life to the profound desolation of abandonment, the author traces the golden thread of Christ's sanctifying influence from the Cross, showing ultimately how true Christian joy can rise gloriously from the dark tomb of pain and suffering.

Fruits of Contemplation

by Victorino Osende, O.P.

$4.75

A masterful explanation of the nature of Christian perfection, the meaning of devotion and prayer, the role of the apostolate, devotion to Mary, the imitation of Christ, and a host of other inspiring truths. "It is inconceivable that any person interested in sanctity could read this book and not be moved by the great spiritual wisdom of the man . . . This surely deserves recognition as a modern masterpiece."—*Ave Maria*

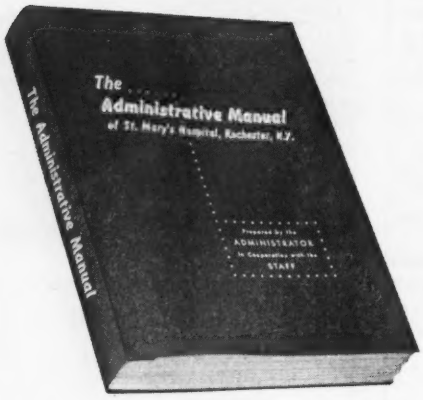
UNIQUE-PRACTICAL-THOROUGH



The Administrative Manual is acclaimed by leading hospital administrators

Here is a guidebook that meets the needs of hospital authorities which has evoked unstinted praise. As a challenge to more efficient hospital operation, the Administrator and staff of St. Mary's Hospital compiled this manual under actual operating conditions. The material clearly sets forth the study of the structure of the hospital, the organization in action (with charts), and the detailed outline of departmental relationships.

After seeing it meet their tests, simplify problems and prove an invaluable tool, the author-compiler decided to pass it on as a reference manual for others. Its comprehensiveness was immediately apparent in the field and earned widespread acceptance. The comments below are perhaps the best testimonial of what other hospital officials think of the value and use of the Administrative Manual.

" . . . is a monument to thoroughness and complete coverage, particularly valuable to directors and department heads."

" . . . is a superb piece of work . . . during the process of revising our hospital techniques, job descriptions, etc., we have referred to the Manual constantly."

" . . . is not content with giving methods alone but also establishes foundations upon which methods rest."

" . . . is a major contribution to the hospital field."

"The ever increasing number of problems confronting the hospital today are exceptionally well covered and the Manual should prove of inestimable value in solving the daily incidents which present themselves."

CONTENTS

of The Administrative Manual include Five major chapters—

GENERAL ADMINISTRATION
CHART SYLLABUS
PATIENT CARE—NURSING SERVICE
SPECIAL PROFESSIONAL SERVICES
ADMINISTRATIVE AND HOUSEHOLD SERVICES

610 Pages of useful information
